## **Educational Development:**

**Educational Development Through Information and Communications Technology** Rakesh Bhanot, Stephen Fallows, 2003-12-16 Information and Communications Technology ICT has proved to be one of the key drivers of change in education. In higher education particularly, ICT is enabling educators, educational developers and institutions to reach out to learners using innovative approaches based on the flexibility, accessibility and diversity that it offers. This book is based on the experiences of expert educational developers from the UK, United States, Canada, South Africa and Malaysia. It considers the ways in which ICT can be used to enhance learning both on and off campus and how educators and institutions have tackled the issues associated with the adoption of new approaches and technologies. However, as the development of new technology is relentless, the book recognizes that ICT is not a panacea in itself; good teaching remains crucial to good education. With this in mind, the contributors address issues beyond technology, looking at the importance of teaching and at the skills of teachers themselves if ICT is to be truly successful. Coverage is grouped into four key themes: strategic issues for ICT initiatives; introducing ICT into the classroom; using ICT in practice; using ICT in learning and educational support. International in scope and written by educators and educational developers rather than by technologists, this book is intended to be accessible to anyone with a critical interest in improving education through the use of ICT. It will be of particular interest to staff and educational developers, ICT coordinators, course leaders and course developers.

**Resources in Education** , 2000-10     *Research in Education* , 1970     **Education Fever** Michael J. Seth, 2002-09-30 In the half century after 1945 South Korea went from an impoverished largely rural nation ruled by a succession of authoritarian regimes to a prosperous democratic industrial society No less impressive was the country s transformation from a nation where a majority of the population had no formal education to one with some of the world s highest rates of literacy high school graduates and university students Drawing on their premodern and colonial heritages as well as American education concepts South Koreans have been largely successful in creating a schooling system that is comprehensive uniform in standard and universal The key to understanding this educational transformation is South Korean society s striking nearly universal preoccupation with schooling what Korean s themselves call their education fever This volume explains how Koreans concern for achieving as much formal education as possible appeared immediately before 1945 and quickly embraced every sector of society Through interviews with teachers officials parents and students and an examination of a wide range of written materials in both Korean and English Michael Seth explores the reasons for this social demand for education and how it has shaped nearly every aspect of South Korean society He also looks at the many problems of the Korean educational system the focus on entrance examinations which has tended to reduce education to test preparation the overheated competition to enter prestige schools the enormous financial burden placed on families for costly private tutoring the inflexibility created by an emphasis on uniformity of standards and the misuse of education by successive governments for political purposes     World Yearbook of Education 2006 Jenny Ozga, Terri Seddon, Thomas S. Popkewitz, 2013-01-11 This volume considers the ways in which educational research is being shaped by policy across the

globe Policy effects on research are increasingly influential as policies in and beyond education drive the formation of a knowledge based economy by supporting increased international competitiveness through more effective evidence based interventions in schooling education and training systems What consequences does this increased steering have for research in education How do transnational agencies make their influence felt on educational research How do national systems and traditions of educational research and relations with policy respond to these new pressures What effects does it have on the quality of research and on the freedom of researchers to pursue their own agendas The 2006 volume of the World Yearbook of Education explores these issues focusing on three key themes globalising policy and research in education steering education research in national contexts global local politics of education research The 2006 volume has a truly global reach incorporating transnational policy perspectives from the OECD and the European Commission alongside national cases from across the world in contrasting contexts that include North and South America Canada France Singapore China Russia and New Zealand The range of contributions reflect how pervasive these developments are how much is new in this situation and to what extent evidence based policy pressures on research in education build on past relationships between education and policy This book considers the impact of the steering processes on the work and identities of individual researchers and considers how research can be organised to play a more active role in the politics of the knowledge economy and learning society
