Borg, 1963 **Educational Research** Gert Biesta, 2020-03-19 With so much technical information about research methods it is easy to lose sight of the bigger picture of why we carry out educational research and where and how research might contribute to the improvement of education Educational Research An Unorthodox Introduction steps you through the wider social and political contexts of educational research focusing on fundamental questions such as what education actually is and what it is for In doing so the book raises questions that more orthodox introductions to the theory and practice of educational research often leave aside Gert Biesta covers a range of key issues which permeate any educational research project including the roles of theory in research what it means and takes to improve education the nature of educational practice the history of educational research and scholarship the connection between research professionalism and democracy and what the social and political dimensions of academic publishing are Each chapter includes a set of questions to stimulate further discussion **Educational Research: Why 'What Works' Doesn't Work** Paul Smeyers, Marc Depaepe, 2007-01-07 Education and educational research according to the current fashion are supposed to be concerned with what works to the exclusion of all other considerations All over the world and particularly in the English speaking countries governments look for means of improving student achievement as measured by standardized test scores Although such improvements are often to be welcomed they do not answer all significant questions about what constitutes good education Also the research on which they are based is not the only legitimate way to do educational research Social research and therefore educational research cannot ignore the distinctive nature of what it studies a social activity where questions of meaning and value cannot be eliminated and where interpretation and judgment play a crucial role In this book distinguished philosophers and historians of education from 6 countries focus on the problematical nature of the search for what works in educational contexts in practice as well as in theory Beginning with specific problems they move on to more general and theoretical considerations seeking to go beyond over simple ideas about cause and effect and the rhetoric of performativity that currently has educational thinking in its grip Freedom of inquiry in educational research can no longer be taken for granted Narrow definitions of what constitutes scientific research funding criteria that enforce particular research methods and policy decision processes that ignore any research that is not narrowly utilitarian create a context in many countries that discourages scholarship of a more speculative exploratory or critical sort This book brings together an exceptional combination of international and cross disciplinary scholars who bring the perspectives of history and philosophy of science to ask How did we arrive at this place and Where is educational research heading The book illuminates the anti intellectual consequences of a what works mentality in education and shows that the ostensibly scientific revolution in educational research in fact reflects an ahistorical and conceptually muddled understanding of what actually constitutes science This book could not be more timely and important
