*Successes abroad, what foreign cities can teach American cities* United States. Congress. House. Committee on Banking, Finance, and Urban Affairs. Subcommittee on the City, 1977     Rural Development Research Report , 1978     *Economic*

*Policy and the Size of Cities* Max Neutze, 1968      *Population, Distribution, and Policy* United States. Commission on Population Growth and the American Future, 1972      *The Development of Rural America* George Brinkman, 2021-10-08

In the last decade rural development emerged as one of the prominent challenges facing the United States. Strong support for rural development is now found in both major political parties and at federal, state and local levels. There is little doubt that the development of rural America will become even more important in the future. Despite unprecedented growth, both urban and rural areas in the United States are greatly deficient in many aspects of quality living conditions. The nation's cities are slowly strangling themselves, jamming together people and industry while spawning pollution, transportation paralysis, housing blight, lack of privacy and a crime-infested society. Rural areas simultaneously suffer from the other extreme: lack of sufficient employment opportunities, outmigration and depopulation, and too few people to support services and institutions. The migration from rural areas contributes to the problems of both the city and countryside: depopulating rural places at the expense of overcrowded cities. This book focuses on rural development: processes, problems and solutions. Seven prominent specialists in the field, including agricultural and regional economists, demographers and administrators, discuss the development of the open country, small towns and smaller cities up to fifty thousand population. They present an integrated approach to rural development problems, not a mere collection of readings. Valuable guidelines for policies to benefit both rural and urban areas are provided. Since rural development involves interdisciplinary scholarship, this book will be of interest to a wide range of social scientists working in rural areas, both here and abroad. Economists, sociologists and political scientists as well as community leaders and planners, legislators, government officials and interested laymen will find this volume useful in understanding the rural development effort. Chapters on the following topics are included: The Philosophy and Process of Community Development; The Emergence of Area Development; Demographic Trends of the U.S. Rural Population; The Conditions and Problems of Nonmetropolitan America; Systems Planning for rural Development; Use of Natural Resources in Community Development; and Rural Poverty and Urban Growth. An Economic Critique of Alternative Spatial Growth Patterns.

*How Should We Measure City Size? Theory and Evidence Within and Across Rich and Poor Countries* Remi Jedwab, Mr. Prakash Loungani, Anthony Yezer, 2019-09-20

It is obvious that holding city population constant, differences in cities across the world are enormous. Urban giants in poor countries are not large using measures such as land area, interior space or value of output. These differences are easily reconciled mathematically as population is the product of land area, structure, space per unit land, i.e. heights and population per unit interior space, i.e. crowding. The first two are far larger in the cities of developed countries while the latter is larger for the cities of developing countries. In order to study sources of diversity among cities with similar population, we construct a version of the standard urban model, SUM, that yields the prediction that the elasticity of city size with respect to income could be similar within both developing countries and developed countries. However, differences in income and urban technology can explain the physical differences between the

cities of developed countries and developing countries Second using a variety of newly merged data sets the predictions of the SUM for similarities and differences of cities in developed and developing countries are tested The findings suggest that population is a sufficient statistic to characterize city differences among cities within the same country not across countries
