**Economics of International Business** Mark Casson, 2000-01-01 This is an interesting book on an important topic Mikael Linden Scandinavian Economic History Review This book is indispensable reading for all researchers and practitioners in the international business field as well as economists and academics alike Giustificativo Pubblicato sul Bollettino del CIRT Economics of International Business sets out a new agenda for international business research Mark Casson asserts that it is time to move the subject on from sterile debates about transaction cost economies and resource based theories of the firm Instead of focusing on the individual firm

the new agenda focuses on the global systems view of international business. A static view of the firm's environment is replaced by a dynamic view which highlights the volatility of the international business environment. Coping with volatility requires entrepreneurial skills, flexibility, and the need to synthesize information on a global basis. To coordinate the global system properly, entrepreneurs must cooperate through social networks of trust as well as competing. Constructing a network of joint ventures, it is argued, is simply not enough. Building on his previous book *The Organization of International Business*, Mark Casson shows that with suitable modifications, the methods of economics can be used to analyse all of these issues in a rigorous way. The tools of business strategy are too clumsy to address the more subtle issues, whilst descriptive approaches fail to bring key issues into sharp relief. This book is indispensable reading for all researchers and practitioners in the international business field as well as economists and academics alike.

**The Economics of Artificial Intelligence**  
Ajay Agrawal, Joshua Gans, Avi Goldfarb, 2019-05-22. Advances in artificial intelligence (AI) highlight the potential of this technology to affect productivity, growth, inequality, market power, innovation, and employment. This volume seeks to set the agenda for economic research on the impact of AI. It covers four broad themes: AI as a general purpose technology, the relationships between AI, growth, jobs, and inequality, regulatory responses to changes brought on by AI, and the effects of AI on the way economic research is conducted. It explores the economic influence of machine learning, the branch of computational statistics that has driven much of the recent excitement around AI, as well as the economic impact of robotics and automation, and the potential economic consequences of a still hypothetical artificial general intelligence. The volume provides frameworks for understanding the economic impact of AI and identifies a number of open research questions.

**The Economics of Innovation** G. M. P. Swann, 2014-05-14 This text provides a comprehensive yet accessible introduction to the economics of innovation written for those with some basic knowledge of economics

Economics of Identity Theft L. Jean Camp, 2007-09-30 Anyone who has ever bought a car rented an apartment had a job or conversation that they would rather not see in their employee review may find this book of interest There is a collision occurring in identity management Identity technologies are problematic and many see light at the end of the identity theft tunnel Yet the innovation is driven by individual tendencies to seek convenience and business imperatives to minimize risk with maximized profit The light is an oncoming identity train wreck of maximum individual exposure social risk and minimal privacy The primary debate over identity technologies is happening on the issue of centralization RealID is effectively a centralized standard with a slightly distributed back end e g fifty servers RealID is a national ID card Many mechanisms for federated identities such as OpenID or the Liberty Alliance imagine a network of identifiers shared on an as needed or ad hoc process These systems accept the limits of human information processing and thus use models that work on paper Using models that work on paper results in systematic risk of identity theft in this information economy There are alternatives to erosions of privacy and increasing fraud There is an ideal where individuals have multiple devices including computers smart cards and cell phones Smart cards are credit card devices that are cryptographically secure This may be shared and misused or secure and privacy enhancing Yet such a system requires coordinated investment

The Economics of New Health Technologies Joan Costa-Font, Christophe Courbage, Alistair McGuire, 2009-05-14 Technological change in healthcare has led to huge improvements in health services and the health status of populations It is also pinpointed as the main driver of healthcare expenditure Although offering remarkable benefits changes in technology are not free and often entail significant financial as well as physical or social risks These need to be balanced out in the setting of government regulations insurance contracts and individuals decisions to use and consume certain technologies With this in mind this book addresses the following important objectives to provide a detailed analysis of what technological change is to identify drivers of innovation in several healthcare areas to present existing mechanisms and processes for ensuring and valuing efficiency and development in the use of medical technologies and to analyse the impact of advances in medical technology on health healthcare expenditure and health insurance Each of the seventeen chapters summarizes an important issue concerning the innovation debate and contributes to a better understanding of the role innovation has both at the macro level and at the delivery meso and micro level in the healthcare sector The effectiveness of innovation in improving people s welfare depends on its diffusion and inception by the relevant agents in the health production process and this book recognizes the multi faceted contribution of policy makers regulators managers technicians consumers and patients to this

technology change This book offers the first truly global economic analysis of healthcare technologies taking the subject beyond simply economic evaluation and exploring the behavioural aspects organization and incentives for new technology developments and the adoption and diffusion of these technologies
