**The Political Economy of National and Energy Security** Pantelis Sklias, Floros Flouros, 2019-01-17 The aim of this collective volume is to study the crucial aspects related to the interconnection between the political economy of energy security and national security which is of great importance globally due to great volatility and complexity Several conceptual frameworks regarding the issue of energy security are examined in order to understand the relationships between relevant parameters and then to investigate their implications for national security Research needs to examine how energy security affects national security of nation states around the world either as producers or consumers of energy resources In this volume the theory of realism is employed for the analysis of such concepts as it emphasizes the primary importance of any given state and its national security whereas realism is essentially a political ideology and looks to provide the proper spectrum for further analysis The fact that the political economy of energy security and the political economy of national security are addressed as separate parts in the literature are among the main drawbacks in our effort to comprehend the issues concerned The abovementioned results to a dichotomy that affects the ontological and epistemological essence of the two pillars of the issue in question based on our working hypothesis should be addressed in a

complementary and interconnected way Addressing both theoretical concepts and case studies to validate the argument the authors believe that the academic level of the proposed subject is related to graduate and postgraduate studies **The**

abstract Since both food security and energy security are countries strategic objective this study typically advocates a deep understanding of the concept of political stability to incorporate food and energy security as a new pillar of conflict management based on an empirical understanding of the nexus and its effect We used food deficit as proxy for food security and energy imports for energy security from the World Bank database Suffering mutilation and death of human beings are the most obvious and important effects of all conflicts as well as natural disasters Yet material losses are also important because they reduce the livelihood and recovery capacities of conflict survivors Moreover in many cases the indirect effects of conflict cause more deaths than direct violence It has been found that generally the indirect costs of war are greater than its direct costs and persist long after the end of the conflict Instability and conflict affect many economic sectors such as reducing foreign exchange earnings which can have serious consequences for development and food security Indeed global population growth combined with the effects of climate change on agriculture pose the risk of a Malthusian trap to humanity that can only be avoided by a more efficient and sustainable production system Energy security policies and climate policies are often considered as two sides of the same coin their objectives being at least complementary if not identical **Energy Security Challenges for the 21st Century** Gal Luft,Anne Korin,2009-08-10 The impact of energy on global security and economy is clear and profound and this is why in recent years energy security has become a source of concern to most countries However energy security means different things to different countries based on their geographic location their endowment of resources their strategic and economic conditions In this book Gal Luft and Anne Korin with the help of twenty leading experts provide an overview of the world s energy system and its vulnerabilities that underlay growing concern over energy security It hosts a debate about the feasibility of resource conflicts and covers issues such as the threat of terrorism to the global energy system maritime security the role of multinationals and non state actors in energy security the pathways to energy security through diversification of sources and the development of alternative energy sources It delves into the various approaches selected producers consumers and transit states have toward energy security and examines the domestic and foreign policy tradeoffs required to ensure safe and affordable energy supply The explains the various pathways to energy security and the tradeoffs among them and demonstrates how all these factors can be integrated in a larger foreign and domestic policy framework It also explores the future of nuclear power the complex relations between energy security and environmental concerns and the role for decentralized energy as a way to enhance energy security
