Ecological Risk Assessment of Contaminants in Soil Nico M. van Straalen,Hans Løkke,1997-05-31 Many industrialized and developing countries are faced with the assessment of potential risks associated with contaminated land A variety of human activities have left their impacts on soils in the form of elevated and locally high concentrations of potential toxicants In several cases sources have not yet been stopped and contamination continues Decisions on the management of contaminated sites and on the regulation of chemicals in the terrestrial environment require information on the extent to which toxicants adversely affect the life support function of soils Ecological insights into the soil as an ecosystem may support such decisions This book reviews the latest ecological principles that should be considered in this respect

Environmental Risk Assessment of Soil Contamination Maria C. Hernandez Soriano,2014-03-26 Soil is an irreplaceable resource that sustains life on the planet challenged by food and energy demands of an increasing population Therefore soil contamination constitutes a critical issue to be addressed if we are to secure the life quality of present and future generations Integrated efforts from researchers and policy makers are required to develop sound risk assessment procedures remediation strategies and sustainable soil management policies Environmental Risk Assessment of Soil Contamination provides a wide depiction of current research in soil contamination and risk assessment encompassing reviews and case studies on soil pollution by heavy metals and organic pollutants The book introduces several innovative approaches for soil remediation and risk assessment including advances in phytoremediation and implementation of metabolomics in soil sciences

Environmental Analysis of

Contaminated Sites Geoffrey I. Sunahara, Agnès Y. Renoux, Claude Thellen, Connie L. Gaudet, Adrien Pilon, 2002-03-12 Die Bioremediation ist ein Verfahren bei dem biologische Verfahren eingesetzt werden um industrielle Schadstoffe in verschiedenen Ökosystemen wieder in den natürlichen Stoffkreislauf zurückzuführen. Ob die Bioremediation erfolgreich ist oder nicht hängt entscheidend vom Verständnis des biotechnologischen Prozesses und von den Stärken und Schwächen der eingesetzten toxikologischen Verfahren ab. Environmental Analysis of Contaminated Sites diskutiert umweltanalytische Verfahren und Methoden zur Bewertung der erfolgreichen Sanierung kontaminierter Bodensysteme. Ein nützlicher Leitfaden, der diese komplexe Thematik umfassend behandelt, indem er Toxizitätstests für den Bodenschutz, die Bioremediation und die Risikobewertung der Umweltgefährdung miteinander verbindet. Darüber hinaus beschreibt er das Zusammenwirken von toxikologischer Labor- und Felduntersuchung, Biotechnologie, Consultants und verschiedenen internationalen Umweltkontrollbehörden und erklärt wie sie gemeinsam an einer erfolgreichen Auswertung sanierter Umweltsysteme arbeiten. Mit zahlreichen Fallstudien zu erfolgreichen und gescheiterten Projekten. *Ecological Risk Assessment* Glenn W. Suter II, 2016-04-19 The definitive reference in its field. We hope that this book will continue to meet the expectations and needs of all interested in diverse fields with expertise in soil science, health, toxicology and other disciplines who contribute and share their findings to take this area forward for future investigations. Bioavailability of Contaminants in Soils and Sediments National Research Council, Division on Earth and Life Studies, Water Science and Technology Board, Committee on Bioavailability of Contaminants in Soils and Sediments, 2003-05-03 Bioavailability refers to the extent to which humans and ecological receptors are exposed to contaminants in soil or sediment. The concept of bioavailability has recently piqued the interest of the hazardous waste industry as an important consideration in deciding how much waste to clean up. The rationale is that if contaminants in soil and sediment are not bioavailable, then more contaminant mass can be left in place without creating additional risk. A new NRC report notes that the potential for the consideration of bioavailability to influence decision making is greatest where certain chemical, environmental and regulatory factors align. The current use of bioavailability in risk assessment and hazardous waste cleanup regulations is demystified and acceptable tools and models for bioavailability assessment are discussed and ranked according to seven criteria. Finally, the intimate link between bioavailability and bioremediation is explored. The report concludes with suggestions for moving bioavailability forward in the regulatory arena.
