Rethinking Macroeconomics for Sustainability Alejandro Nadal,2011-01-13 Macroeconomic policies have devastating effects on the environment They shape the economic processes that drive deforestation soil erosion the exhaustion of living marine resources greenhouse gas emissions and the massive loss of biodiversity Despite this the vital connection between macroeconomic policies and the environment has thus far received little attention by the academic and the policy making communities Rethinking Macroeconomics for Sustainability reveals the linkages between monetary financial and fiscal policies and the environmental degradation that threatens the planet s biosphere In doing so it examines the complex lines of transmission from policy priorities all the way down to the effects at the local level as well as analyzing the deep seated relationship between macroeconomic policy models and their impacts on growth peoples livelihoods and the environment Besides exploring the relation between macroeconomic and climate change policies as well as efforts to green the world economy the book considers five key case studies in Latin American economies Going beyond this it also sets out specific policy recommendations both at the national and international levels All this is based on the incontrovertible premise that macroeconomic policies must be redesigned in order to attain long term sustainability objectives and that monetary and fiscal policies are as important for environmental stewardship as they are for growth and prosperity **The Computational Structure of Life Cycle Assessment** R. Heijungs,Sangwon Suh,2013-04-17 Life Cycle assessment LCA is a tool for environmental decision support in relation to products from the cradle to the grave Until now more emphasis has

been put on the inclusion quantitative models and databases and on the design of guidebooks for applying LCA than on the integrative aspect of combining these models and data This is a remarkable thing since LCA in practice deals with thousands of quantitative data items that have to be combined in the correct manner For this one needs mathematical rules and algorithmic principles for carrying out an LCA This book presents the first coherent treatment of the mathematical and algorithmic aspects of LCA These computational aspects are presented in matrix form so that a concise and elegant formulation is achieved This form moreover provides a platform for further extension of analysis using perturbation theory structural theory and economic input output analysis

Wenk, 2005-04-11 The European Union's Eco Management and Audit Scheme or EMAS has been in existence since 1995 with over 3 000 sites registered to the Scheme However even to the present day there exist very few texts which address the specific requirements of the standard and provide real world examples of the practical considerations companies and sites must contend with in order to successfully earn registration to the Scheme No author has synthesized the controversies debates developments and amendments which have surrounded and impacted this often controversial Scheme until now This text definitively breaks down each component of the EMAS regulation including the appendices and applicable EU guidance documents on the topic providing a step by step analysis of the Scheme In addition the work provides examples of three of Akzo Nobel Incorporated's manufacturing locations which have been registered to EMAS providing examples of how to meet the requirements of the Scheme The target audience is threefold first environmental managers who are considering implementing EMAS in their firms but who have little knowledge of the Scheme will find the work highly useful Secondly university students professors and programs who study environmental auditing as part of their coursework and who are seeking a solid overview of the program may employ the text Finally

Ahead of the Curve K. Green, P. Groenewegen, P. S. Hofman, 2012-12-06 The debate on sustainable production often ends in discussions on the feasibility of far reaching changes in relation to the competitiveness of companies Industry itself and policy makers tend to back away from engaging in profound processes of industrial transformation Examples of companies who have voluntarily moved beyond what is seen as reasonable and feasible can overcome this deadlock This book collects a fine sample of companies who have taken up their responsibility in this respect To quote the editors of this book They are cases that might provide other firms and policy makers with ideas for innovative environmental responses that are outside the slowly rising trend of improvement that we are currently observing in short the cases are of firms and ideas that are ahead of the curve The editors and many of the authors of this volume are members of the Greening of Industry Network and have been debating with one another for years Founded in 1991 the Greening of Industry Network comprises over 1500 individuals representing academia business public interest labor and government from more than 50 countries Participants work together to build policies and strategies toward creating a sustainable future through many vehicles coordinating research efforts publications planning and participating in workshops public forums and conferences To provide benefit to broader society the Network stimulates public dialogue and brings together academic researchers from many disciplines with other stakeholders who traditionally do not work together in coalitions

International Journal of Sustainable Development, 2001 Circular Economy and the Law Feja Lesniewska, Katrien Steenmans, 2023-02-02 This book explores the role of law and policy in circular economy transitions and their impacts on justice including on distributional equity and recognition and procedural rights especially for people already marginalised under the current dominant economic system Amid increasing demand for virgin raw materials and unsustainable consumption and waste disposal that are driving the global ecological and climate crisis there are growing calls to urgently transition to circular economies Despite an increasing number of circular approaches being adopted implemented and integrated in national and local laws and policies the number of commercially successful business stories remains isolated Moreover questions about whether circular economy laws and policies are delivering fair and just global outcomes need to be addressed This book examines this significant knowledge gap to understand legal experiences including justice and equity issues in the global context so that these can inform wider design and implementation The book begins by explaining the concept of a circular economy and its context within wider issues of sustainable development and justice The first part of the book then examines the legal context of the circular economy by analysing legal forms in practice and those recommended in wider scholarship before considering how these could impact on existing inequity and injustices globally The second part delivers an empirical understanding of the implications of the law on circular economy approaches and the global equity and justice dimensions through two case studies on solid waste management and forestry The final part addresses legal

opportunities and challenges for wider implementation of circular economy approaches that incorporate justice into its framing This book will be of great interest to students scholars and practitioners of environmental and natural resource law and policy circular economy industrial ecology natural resource management and sustainable development more broadly
