Economic Theory And The Core:

Economic Theory and the Core Lester G. Telser, 1978 **Economic Theory and International Trade** Wilhelm Neufeldt, Raymond G. Riezman, 2012-12-06 This volume contains papers on Economic Theory and International Trade The papers on Economic Theory cover the existence and structure of competitive equilibrium in various settings non convexities non transitivity of preferences and absence of differentiability or free disposal assumptions the role of the compensating variation as a welfare measure oligopoly under bounded rationality and regulation of a public utility The papers on International Trade offer analyses of the Dutch disease or the Atlantic Slave Trade or treat the influence of economic growth on import demand the terms of trade and other economic variables as well as theoretical and empirical evidence for the validity of the Heckscher Ohlin model The papers rigorous and often requiring mathematical sophistication variously reflect Trout Rader's work **An Account of "the Core" in Economic Theory** Jonathan Coglianò, 2019 The concept of the core originates in cooperative game theory and its introduction to economics in the 1960s as a basis for proofs of existence of general equilibrium is one of the earliest attempts to use game theory to address big questions in economics Discovery of the core was met with enthusiasm among the community of economic theorists at the time However use of the core eventually waned and the concept faded into the backdrop of economic theory This paper makes use of unpublished correspondence between Herbert Scarf Lloyd Shapley and Martin Shubik as well as other archival and secondary resources to provide an account of the development of the core and the trajectory of this concept including those who developed it after its initial appearance It is found that the core's eventual decline is explained by the combined effect of the slowing general equilibrium research program in the 1970s the increasing prominence of non cooperative game theory and subtle issues with the concept that shaped Scarf and Shubik's research programs after the 1960s **Economic Theory and the Ancient Mediterranean** Donald W. Jones, 2014-06-03 Economic Theory and the Ancient Mediterranean presents a comprehensive introduction to the application of contemporary economic theory to the ancient societies of the Mediterranean Sea from the period of 5000 BCE to 400 CE Offers an accessible presentation of modern economic theory and its relationships to ancient societies Presents innovative expositions and applications of economic theory to issues in antiquity not often found in the literature Features insightful discussions of the relevance of contemporary economic models to various situations in antiquity Written for a broad range of scholars of ancient Mediterranean regions including archaeologists ancient historians and philologists *Nonlinear and Convex Analysis in Economic Theory* Toru Maruyama, Wataru Takahashi, 2012-12-06 The papers collected in this volume are contributions to T I Tech K E S Conference on Nonlinear and Convex Analysis in Economic Theory which was held at Keio University July 2-4 1993 The conference was organized by Tokyo Institute of Technology T I Tech and the Keio Economic Society K E S and supported by Nihon Keizai Shimbun Inc A lot of economic problems can be formulated as constrained optimizations and equilibrations of their solutions Nonlinear convex analysis has been supplying economists with

indispensable mathematical machineries for these problems arising in economic theory Conversely mathematicians working in this discipline of analysis have been stimulated by various mathematical difficulties raised by economic theories Although our special emphasis was laid upon nonlinearity and convexity in relation with economic theories we also incorporated stochastic aspects of financial economics in our project taking account of the remarkable rapid growth of this discipline during the last decade The conference was designed to bring together those mathematicians who were seriously interested in getting new challenging stimuli from economic theories with those economists who were seeking for effective mathematical weapons for their researches Thirty invited talks six of them were plenary talks given at the conference were roughly classified under the following six headings 1 Nonlinear Dynamical Systems and Business Fluctuations 2 Fixed Point Theory 3 Convex Analysis and Optimization 4 Eigenvalue of Positive Operators 5 Stochastic Analysis and Financial Market 6 General Equilibrium Analysis

Economic Theory and the Cities J. Vernon Henderson, 2014-06-28 The Second Edition of *Economic Theory and the Cities* has been revised and expanded with both the graduate student and the practicing professional in mind Providing a state of the art synthesis of important theoretical topics in urban economics the volume emphasizes the fundamental links between urban economics and new developments in mainstream economic theory From the Preface In this book I present what I believe to be the most important theoretical topics in urban economics Since urban economics is a rather diffuse field any presentation is necessarily selective reflecting personal tastes and opinions Given that I note on what basis I chose the material that is presented and developed First the basic spatial model of a monocentric city is presented since it lays the foundation for thinking about many of the topics in urban economics The consideration of space and spatial proximity is one central feature of urban economics that distinguishes it from other branches of economics The positive and negative externalities generated by activities locating in close spatial proximity are central to analysis of urban phenomena However in writing this book I have tried to maintain strong links between urban economics and recent developments in mainstream economic theory This is reflected in the chapters that follow which present models of aspects of the most important topics in urban economics externalities housing transportation local public finance suburbanization and community development In these chapters concepts from developments in economics over the last decade or so are woven into the traditional approaches to modeling these topics Examples are the role of contracts in housing markets and community development portfolio analysis in analyzing housing tenure choice and investment decisions the time inconsistency problem in formulating long term economic relationships between communities developers and local governments search in housing markets and dynamic analysis in housing markets and traffic scheduling The book ends with chapters on general equilibrium models of systems of cities demonstrating how individual cities fit into an economy and interact with each other This book is written both as a reference book for people in the profession and for use as a graduate text In this edition a strong effort has been made to present the material at a level and in a style suitable for graduate students The edition has greatly expanded

the sections on housing and local public finance so these sections could be studied profitably by a broad range of graduate students Recommended prerequisites are an undergraduate urban economics course and a year of graduate level microeconomic theory It is possible that the book can be used in very advanced undergraduate courses if the students are well versed in microeconomics and are quantitatively oriented Focus on the basic spatial model of the monocentric city Expanded sections on housing and local public finance Discussion of the critical role of spatial proximity of different economic activities such as housing transportation and community development The Handbook of Maritime Economics and Business Costas Grammenos,2013-07-04 This book is the founding title in the Grammenos Library The diversity of the subjects covered is unique and the results of research developed over many years are not only comprehensive but also have important implications on real life issues in maritime business The new edition covers a vast number of topics including Shipping Economics and Maritime Nexus International Seaborne Trade Economics of Shipping Market and Shipping Cycles Economics of Shipping Sectors Issues in Liner Shipping Economics of Maritime Safety and Seafaring Labour Market National and International Shipping Policies Aspects of Shipping Management and Operations Shipping Investment and Finance Port Economics and Management Aspects of International Logistics **The New Palgrave Dictionary of Economics**,2016-05-18 The award winning The New Palgrave Dictionary of Economics 2nd edition is now available as a dynamic online resource Consisting of over 1 900 articles written by leading figures in the field including Nobel prize winners this is the definitive scholarly reference work for a new generation of economists Regularly updated This product is a subscription based product Antitrust Law Keith N. Canonizing Economic Theory Christopher D. Mackie, 2016-07-11 Historians of economic thought traditionally summarize critique and trace the development of existing theory History of thought literature provides information about the authors chronology and relative importance of influential works Generally missing from the literature however are answers to questions about why economic theory exists in its current form Why have economists chosen the theories they have to represent the discipline s formal content What are the criteria that determine the value of a theory or of research in general and how have these criteria changed over time In this insightful and well written work Christopher Mackie analyzes how ideas and theories are accepted in economics from the pre publication phase to the point at which once written a theory enters the accepted body of professional literature Drawing from economics the history of science and philosophy Mackie shows how both empirical and non empirical criteria determine how theory will actually evolve

and public finance **Differential Information Economies** Dionysius Glycopantis, Nicholas C. Yannelis, 2005-12-28 One of the main problems in current economic theory is to write contracts which are Pareto optimal incentive compatible and also implementable as a perfect Bayesian equilibrium of a dynamic noncooperative game The question arises whether it is possible to provide Walrasian type or cooperative equilibrium concepts which have these properties This volume contains original contributions on noncooperative and cooperative equilibrium notions in economies with differential information and provides answers to the above questions Moreover issues of stability learning and continuity of alternative equilibria are also examined *Economic Theory of Fuzzy Equilibria* Antoine Billot, 2012-12-06 Fuzzy set theory which started not much more than 20 years ago as a generalization of classical set theory has in the meantime evolved into an area which scientifically as well as from the point of view of applications is recognized as a very valuable contribution to the existing knowledge This book provides a remarkable contribution to Fuzzy Economics and presents the state of the art in fuzzy theory of value namely the aggregated model of microeconomics with fuzzy behaviours It presents an analysis of classical problems with new tools which lead to interesting results *An Economic Theory of Greed, Love, Groups, and Networks* Paul Frijters, 2013-03-07 Why are people loyal How do groups form and how do they create incentives for their members to abide by group norms Until now economics has only been able to partially answer these questions In this groundbreaking work Paul Frijters presents a new unified theory of human behaviour To do so he incorporates comprehensive yet tractable definitions of love and power and the dynamics of groups and networks into the traditional mainstream economic view The result is an enhanced view of human societies that nevertheless retains the pursuit of self interest at its core This book provides a digestible but comprehensive theory of our socioeconomic system which condenses its immense complexity into simplified representations The result both illuminates humanity's history and suggests ways forward for policies today in areas as diverse as poverty reduction and tax compliance *Advances in Economics and Econometrics: Volume 1, Economic Theory* Daron Acemoglu, Manuel Arellano, Eddie Dekel, 2013-05-13 This is the first of three volumes containing edited versions of papers and commentaries presented at invited symposium sessions of the Tenth World Congress of the Econometric Society held in Shanghai in August 2010 The papers summarize and interpret key developments in economics and econometrics and they discuss future directions for a wide variety of topics covering both theory and application Written by the leading specialists in their fields these volumes provide a unique accessible survey of progress on the discipline The first volume primarily addresses economic theory with specific focuses on nonstandard markets contracts decision theory communication and organizations epistemics and calibration and patents **Assets, Beliefs, and Equilibria in Economic Dynamics** Charalambos D.
