The Economics of Computers C. C. Gotlieb, 1985 The Organization of Economic Innovation in Europe Alfonso Gambardella, Franco Malerba, 1999-11-18 The structures and dynamics of technological innovation in Europe analysed in theory and in practice **Software Engineering** Richard W. Selby, 2007-06-04 This is the most authoritative archive of Barry Boehm's contributions to software engineering Featuring 42 reprinted articles along with an introduction and chapter summaries to provide context it serves as a how to reference manual for software engineering best practices It provides convenient access to Boehm's landmark work on product development and management processes The book concludes with an insightful look to the future by Dr Boehm *Industrial Organisation and Innovation* Salvatore Torrisi, 1998-01-01 This work provides a systematic quantitative analysis of the development of the software industry the major growth industry in advanced economies It presents the results of industry surveys shedding light on differences in specialisation and performance of European and US software firms Productivity Issues in Services at the Micro Level Zvi Griliches, Jacques Mairesse, 2012-12-06 7 take advantage of the panel structure of their data to control for possible errors of specification in their models It is interesting to note that the econometric and DEA methods may be closer than some of their respective advocates seem to believe Several of the studies show that the former as well as the latter can be effectively used to assess the relative efficiency of groups of firms or individual firms and one of them explicitly compare results arising from both Fecher et al Econometric techniques can also be nonparametric and applied to estimating cost or production frontiers and not only average functions while ultimately DEA should be amenable to statistical inference Perhaps the most valuable feature of all the analyses is their care and ingenuity in putting together the data measuring variables and pulling out relevant information Many of them are not content with an overall output measure but endeavor to manage with less aggregated measures Nearly all also include in the estimated models a number of auxiliary variables intended to control for specific attributes of outputs inputs or production techniques and other characteristics of firms Cost-benefit Analysis and Evolutionary Computing John H.
