The Eye and Orbit in Thyroid Disease Colum A. Gorman, Robert R. Waller, John Allen Dyer, 1984 **Thyroid Diseases** Fabrizio Monaco, Maria A. Satta, Brahm Shapiro, Luigi Troncone, 2024-12-06 Thyroid Diseases Clinical Fundamentals and Therapy provides a wide ranging examination of all clinically significant areas of thyroid diseases Underlying physiological principles are closely linked to the clinical situation and practical therapeutic interventions The book examines the clinical course therapy and final outcome of thyroid diseases particularly the bimodal and transient evolution of several thyroid diseases It also discusses the medical surgical and radiometabolic therapy of thyroid diseases stressing the pros and cons of each therapeutic modality More than 80 acknowledged experts from North America Europe and Japan have contributed to this exceptional reference volume making it essential for physiologists clinical endocrinologists radiologists researchers in nuclear medicine oncologists and radiotherapists

Thyroid Eye Disease Rebecca S. Bahn, 2001-07-31 Patients afflicted with thyroid eye disease or Graves ophthalmopathy GO may experience not only pain and visual loss but also disfigurement Full understanding of pathogenesis has been elusive and treatment modalities are imperfect As with other conditions more effective intervention will follow only after a better understanding of pathogenesis is reached The goal of this volume is to give an overview by leaders in the field of the present state of the art both in pathogenesis and clinical aspects of GO Much attention has been directed towards determining which cells within the orbit are targets of the autoimmune process and how these and other cells might participate in the local inflammatory process It is now generally agreed that orbital fibroblasts preadipocyte fibroblasts and adipocytes are the targeted and activated cells in GO and that full length TSH receptor TSHr is expressed in these cells Further there is growing consensus that this receptor is up regulated in the orbit in GO residing primarily in newly differentiated adipocytes However it is also evident given a sufficiently sensitive assay that TSHr is detectable in fibroblasts and adipocytes from the normal orbit and other anatomic sites as well It will be important to determine whether the observed increase in orbital TSHr expression itself initiates the orbital autoimmune process Also to be decided is whether orbital lymphocytes from GO patients specifically recognize this receptor and what factor or factors unique to Graves disease might stimulate TSHr expression in orbital cells

McLachlan,2000-06-30 From the perspective of the investigator Graves disease is a fascinating disorder with unique features and opportunities for study The discovery in 1956 that Graves disease was caused by a humoral factor later shown to be an antibody to the TSH receptor was a triumph for modern investigative medicine Rapid progress is now being made in i understanding the molecular interaction between autoantibodies and the TSH receptor ii identifying the genes that contribute to the predisposition to disease iii developing an animal model of Graves disease and iv identifying the long sought orbital antigen in ophthalmopathy From the clinical standpoint although Graves disease is eminently treatable there is no definitive cure None of the therapeutic options are ideal It is hoped that rapid progress in understanding the pathogenesis of the disease will lead to the ultimate goal of some form of immunotherapy that will make antithyroid drugs radioiodine and thyroidectomy obsolete The chapters in Graves Disease Pathogenesis and Treatment represent the viewpoints of many prominent clinicians and investigators working in the field The editors are grateful for their contributions which cover an unusually comprehensive compendium of subjects relating to the disease **Thyroid and Parathyroid Imaging, An Issue of Neuroimaging Clinics of North America, E-Book** Salmaan Ahmed,J. management Facing an emergency situation where improper management can rapidly worsen the condition leading to blindness or even death of the patient is every ophthalmologist's nightmare The emergent nature of these conditions does not always provide for a leeway to refer these patients to an orbit and oculoplasty specialist who are few and far between By the time the patient reaches his destination his vision maybe irrevocably lost The legal implications of such mismanagement can be significant too This book is a quick and essential resource to manage and refer eye emergencies with confidence
