An F Space Sampler, 1984 *Introduction to Uniform Spaces* I. M. James, 1990-05-03 This book is based on a course taught to an audience of undergraduate and graduate students at Oxford and can be viewed as a bridge between the study of metric spaces and general topological spaces About half the book is devoted to relatively little known results much of which is published here for the first time The author sketches a theory of uniform transformation groups leading to the theory of uniform spaces over a base and hence to the theory of uniform covering spaces Readers interested in general topology will find much to interest them here Geometric Aspects of General Topology Katsuro Sakai, 2013-07-22 This book is designed for graduate students to acquire knowledge of dimension theory ANR theory theory of retracts and related topics These two theories are connected with various fields in geometric topology and in general topology as well Hence for students who wish to research subjects in general and geometric topology understanding these theories will be valuable Many proofs are illustrated by figures or diagrams making it easier to understand the ideas of those proofs Although exercises as such are not included some results are given with only a sketch of their proofs Completing the proofs in detail provides good exercise and training for graduate students and will be useful in graduate classes or seminars Researchers should also find this book very helpful because it contains many subjects that are not presented in usual textbooks e g $\dim X$ $\dim X + 1$ for a metrizable space X the difference between the small and large inductive dimensions a hereditarily infinite dimensional space the ANR ness of locally contractible countable dimensional metrizable spaces an infinite dimensional space with finite cohomological dimension a dimension raising cell like map and a non AR metric linear space The final chapter enables students to understand how deeply related the two theories are Simplicial complexes are very useful in topology and are indispensable for studying the theories of both dimension and ANRs There are many textbooks from which some knowledge of these subjects can be obtained but no textbook discusses non locally finite simplicial complexes in detail So when we encounter them we have to refer to the original papers For instance J H C Whitehead's theorem on small subdivisions is very important but its proof cannot be found in any textbook The homotopy type of simplicial complexes is discussed in textbooks on algebraic topology using CW complexes but geometrical arguments using simplicial complexes are rather easy Lie Group Machine Learning Fanzhang Li, Li Zhang, Zhao Zhang, 2018-11-05 This book explains deep learning concepts and derives semi supervised learning and nuclear learning frameworks based on cognition mechanism and Lie group theory Lie group machine learning is a theoretical basis for brain intelligence Neuromorphic learning NL advanced machine learning and advanced artificial intelligence The book further discusses algorithms and applications in tensor learning spectrum estimation learning Finsler geometry learning Homology boundary learning and prototype theory With abundant case studies

this book can be used as a reference book for senior college students and graduate students as well as college teachers and scientific and technical personnel involved in computer science artificial intelligence machine learning automation mathematics management science cognitive science financial management and data analysis In addition this text can be used as the basis for teaching the principles of machine learning Li Fanzhang is professor at the Soochow University China He is director of network security engineering laboratory in Jiangsu Province and is also the director of the Soochow Institute of industrial large data He published more than 200 papers 7 academic monographs and 4 textbooks Zhang Li is professor at the School of Computer Science and Technology of the Soochow University She published more than 100 papers in journals and conferences and holds 23 patents Zhang Zhao is currently an associate professor at the School of Computer Science and Technology of the Soochow University He has authored and co authored more than 60 technical papers

Algebras of Unbounded Operators Aleksey Ber, Vladimir Chilin, Galina Levitina, Fedor Sukochev, Dmitriy Zanin, 2025-03-03 Derivations on von Neumann algebras are well understood and are always inner meaning that they act as commutators with a fixed element from the algebra itself The purpose of this book is to provide a complete description of derivations on algebras of operators affiliated with a von Neumann algebra The book is designed to serve as an introductory graduate level to various measurable operators affiliated with a von Neumann algebras and their properties These classes of operators form their respective algebras and the problem of describing derivations on these algebras was raised by Ayupov and later by Kadison and Liu A principal aim of the book is to fully resolve the Ayupov Kadison Liu problem by proving a necessary and sufficient condition of the existence of non inner derivation of algebras of measurable operators It turns out that only for a finite type I von Neumann algebra M may there exist a non inner derivation on the algebra of operators affiliated with M In particular it is established that the classical derivation d/dt of functions of real variables can be extended up to a derivation on the algebra of all measurable functions This resolves a long standing problem in classical analysis
