Containing fully updated chapters it provides the GP and optometrist with everything they need to know to enable them to deal with eye problems in primary care. Diabetic Eye Disease in Clinical Practice Rishi P Singh, 2015-07-15 This handbook is an overview of the diagnosis, treatment and long term management of diabetic retinopathy within the context of overall long term diabetes disease management. Diabetes related eye damage, diabetic retinopathy, is one of the most common complications of diabetes affecting approximately 30-40% of people with diabetes. The situation is so severe that in countries such as the US and UK, diabetic retinopathy is currently the leading cause of blindness in people age 20 to 74 years old. Update on Glaucoma Research: From Basic Science to Clinical Practice Alessio Martucci, Maria Dolores Pinazo-Duran, Carlo Nucci, 2025-03-12 Glaucoma is one of the leading causes of global irreversible blindness. It is characterized by a progressive loss of retinal ganglion cells with corresponding optic nerve alterations and visual field loss. The pathophysiology of glaucoma is multifactorial and there are several clinical phenotypes. Diagnosis of glaucoma is not always straightforward. Glaucoma slowly damages the eyes, causing irreversible injury before there is any vision loss, which implies that a large number of glaucoma patients remain undiagnosed, leading to blindness. Elevated intraocular pressure (IOP) is recognized as a major risk factor for the development and progression of glaucoma, and lowering IOP is currently the primary strategy of treating the disease. However, new medical treatment strategies such as neuroprotectors and para-surgical or surgical treatments have been proposed. Numerous clinical trials evaluating either

medical surgical or behavioral interventions are being conducted around the world to study glaucoma with the aim of improving its diagnosis management and treatment
