The Moving Tablet of the Eye Nicholas Wade, Benjamin W. Tatler, 2005 Eye movements are a vital part of our interaction with the world They play a pivotal role in perception cognition and education Research in this field is now proceeding at a considerable pace and casting new light on how the eyes move and what information we can derive during the frequent and brief periods of fixation However the origins of this work are less well known even though much of our knowledge was derived from this research with far more primitive equipment This book is unique in tracing the history of eye movement research It shows how great strides were made in this area before modern recording devices were available especially in the measurement of nystagmus When photographic techniques were adapted to measure discontinuous eye movements from about 1900 many of the issues that are now basic to modern research were then investigated One of the earliest cognitive tasks examined was reading and it remains in the vanguard of contemporary research Modern researchers in this field will be astonished at the subtleties of these early experimental studies and the ingenuity of interpretations that were advanced one and even two centuries ago Though physicians often carried out the original eye movement research later on it was pursued by psychologists it is within contemporary neuroscience that we find these two strands reunited Anyone interested in the origins of psychology and neuroscience will find much to stimulate and surprise them in this valuable new work

The Oxford Compendium of Visual Illusions Arthur Gilman Shapiro, Dejan Todorović, 2017 Visual illusions are compelling phenomena that draw attention to the brain's capacity to construct our perceptual world The Compendium is a collection of over 100 chapters on visual illusions written by the illusion creators or by vision scientists who have investigated mechanisms underlying the phenomena

Destined for Distinguished Oblivion Nicholas J. Wade, 2012-12-06 My first encounter with the name of William Charles Wells over twenty years ago was an oblique reference to his Essay upon single vision that Wheatstone 1838 made in a classical article on binocular vision The reference was enigmatic because it stated that few had paid attention to Wells theory of visual direction while doing little to inform the reader of its novelty I was fortunate in having the excellent facility of the Rare Books and Manuscripts Department of the Library at the University of St Andrews near at hand so that I could consult a copy of Wells monograph However I was not aware of the full import of its contents until Hiroshi Ono visited Dundee from York University Ontario in 1980 Hiroshi had previously formalised the principles of binocular visual direction that Hering 1879 had proposed He returned one day from St Andrews having read Wells Essay upon single vision amazed to have found that Wells had performed similar experiments and reached similar conclusions to Hering Hiroshi Ono has done much to bring Wells work on binocular single vision to the notice of visual scientists although its reception has not been without opposition As I read more of Wells work on vision I became aware of its breadth as well as its depth In addition to his essay on binocular single vision he wrote about and conducted experiments on accommodation visual acuity visual persistence and vertigo

Perception and Illusion N.J. Wade, 2006-03-30 Our contact

with the world is through perception and therefore the study of the process is of obvious importance and significance. For much of its long history the study of perception has been confined to naturalistic observation. Nonetheless the phenomena considered worthy of note have not been those that nurture our survival: the veridical features of perception but the oddities or departures from the common and commonplace accuracies of perception. With the move from the natural world to the laboratory the oddities of perception multiplied and they received ever more detailed scrutiny. My general intention is to examine the interpretations of the perceptual process and its errors throughout history. The emphasis on errors of perception might appear to be a narrow approach but in fact it encompasses virtually all perceptual research from the ancients until the present. The constancies of perception have been taken for granted whereas departures from constancies: errors or illusions have fostered fascination.

A Natural History of Vision Nicholas J. Wade, 2000-01-31 This illustrated survey covers what Nicholas Wade calls the observational era of vision beginning with the Greek philosophers and ending with Wheatstone's description of the stereoscope in the late 1830s.

Reading as a Perceptual Process A. Kennedy, D. Heller, J. Pynte, Ralph Radach, 2000-08-04 This book is divided into five sections dealing with various fundamental issues in current research: attention, information processing and eye movement control; the role of phonology in reading; syntax and discourse processing; and computational models and simulations. Control and measurement of eye movements form a prominent theme in the book. A full understanding of the where and when of eye movement control is a prerequisite of any complete theory of reading since it is precisely at this point that perceptual and cognitive processes interact. Amongst the hot topics included are the relation between parafoveal and foveal visual processing of linguistic information; the role of phonology in fluent reading; and the emergence of statistical tuning approaches to sentence parsing. Also discussed in the book are three attempts to develop quantitative models of reading which represent a significant departure in theory building and a quantum step in the maturation of reading research. Much of the work reported in the book was first presented at the 5th European Workshop on Language Comprehension organised in April 1998 which was held at the CNRS Luminy Campus near Marseilles. All contributions summarise the state of the art in the relevant areas of reading research.

From Neuron to Action Lüder Deecke, John Eccles, Vernon B. Mountcastle, 2013-03-09 A rich source of information about human voluntary movement in health and disease can be found in this book. The most esteemed researchers in their respective fields bring you up to date articles. Their collected work combines fundamental research in the life sciences with clinical neuroscience in a unique overview. The interdisciplinary aspects of motor physiology uncover a wealth of information for researchers from neighboring disciplines. For example: oculomotor research, vestibular research, equilibrium, sensory research and cognition, evolution, synaptic and elementary processes and the neurological sciences can be discovered.

Crowd Dynamics, Volume 1 Livio Gibelli, Nicola Bellomo, 2019-01-22 This volume explores the complex problems that arise in the modeling and simulation of crowd dynamics in order to present the state of the art of this emerging field and contribute to future research activities.

Experts in various areas apply their unique perspectives to specific aspects of crowd dynamics covering the topic from multiple angles These include a demonstration of how virtual reality may solve dilemmas in collecting empirical data a detailed study on pedestrian movement in smoke filled environments a presentation of one dimensional conservation laws with point constraints on the flux a collection of new ideas on the modeling of crowd dynamics at the microscopic scale and others Applied mathematicians interested in crowd dynamics pedestrian movement traffic flow modeling urban planning and other topics will find this volume a valuable resource Additionally researchers in social psychology architecture and engineering may find this information relevant to their work **Research Awards Index** ,1978 **Research Grants**
