## **Eyes Of Discovery The Pageant Of North A:**

**The Eyes of Discovery** John Bakeless, 1950      **The National Survey of Historic Sites and Buildings**, 1968      **Atlas of the North American Indian** Carl Waldman, Molly Braun, 2009 Presents an illustrated reference that covers the history culture and tribal distribution of North American Indians      **Early Visions and Representations of America** M. Carmen Gomez-Galisteo, 2012-11-22 When the Europeans first arrived in America they had a number of preconceptions prejudices expectations and hopes about what life in the New World would be like This book examines the different visions and representations of America conveyed in the writings of Spanish conquistador lvar N ez Cabeza de Vaca and the Pilgrim leader William Bradford taking both writers within their respective literary and historical contexts Anthologies of American literature have consistently ignored Spanish language achievements on the grounds of a restrictive interpretation of American literature based on linguistic boundaries Consequently Spanish language texts such as Cabeza de Vaca s or the account by the Hidalgo de Elvas to name but two examples have been marginalized in the narrative of American literary history In seeking to redress this neglect Galisteo contributes to scholarship which seeks to analyze Early America as a whole including not only Anglo American perspectives but also the Spanish American aspect of the colonization process      Forest, Field, and Fallow Antoinette M.G.A. WinklerPrins, Kent Mathewson, 2021-01-12 This volume aims to present the essential work of geographer and historical ecologist William M Denevan to explain the impact and influence his thinking had on the conceptual advancement not only in his own discipline but in a range of related disciplines such as anthropology archaeology and environmental history The book is organized around eight themes demonstrating Denevan s early and profound insights on topics that remain of current relevance today and the scholarly impact his writing had on subsequent scholarship The book is unique because it offers commentary from active scholars who address the impacts of Prof Denevan s thinking and work on contemporary environmental and ecological issues with a focus on several groundbreaking themes e g historical demography agricultural landforms cultural plant geography human environmental impacts indigenous agro ecology tropical agriculture livestock and landscape and synthetic contributions This book will be of interest to a range of scholars in geography anthropology archaeology history and ecology as well as to environmental managers and practitioners especially those working for non profit organizations and government organizations tasked with finding ways to adapt to global environmental change      *1491 (Second Edition)* Charles C. Mann, 2006-10-10 NATIONAL BESTSELLER A groundbreaking work of science history and archaeology that radically alters our understanding of the Americas before the arrival of Columbus in 1492 from a remarkably engaging writer The New York Times Book Review Contrary to what so many Americans learn in school the pre Columbian Indians were not sparsely settled in a pristine wilderness rather there were huge numbers of Indians who actively molded and influenced the land around them The astonishing Aztec capital of Tenochtitlan had running water and immaculately clean streets and was larger than any contemporary European city

Mexican cultures created corn in a specialized breeding process that it has been called man's first feat of genetic engineering. Indeed, Indians were not living lightly on the land but were landscaping and manipulating their world in ways that we are only now beginning to understand. Challenging and surprising this is a transformative new look at a rich and fascinating world we only thought we knew. *Reading the Roots* Michael P. Branch, 2004. *Reading the Roots* is an unprecedented anthology of outstanding early writings about American nature, a rich influential yet critically underappreciated body of work. Rather than begin with Henry David Thoreau who is often identified as the progenitor of American nature writing, editor Michael P. Branch instead surveys the long tradition that prefigures and anticipates Thoreau and his literary descendants. The selections in *Reading the Roots* describe a diversity of landscapes, wildlife, and natural phenomena, and their authors represent many different nationalities, cultural affiliations, religious views, and ideological perspectives. The writings gathered here also range widely in terms of subject, rhetorical form, and disciplinary approach, from promotional tracts and European narratives of contact with Native Americans to examples of scientific theology and romantic nature writing. The volume also includes a critical introduction discussing the cultural, scientific, and literary value of early American nature writing, headnotes that contextualize all authors and selections, and a substantial bibliography of primary and secondary sources in the field. *Reading the Roots* at last makes early American landscapes and a range of literary responses to them accessible to scholars, students, and general readers.

**Colonial America and the War for Independence** US Army Military History Research Collection, Joyce L. Eakin, 1976

**Biological Consequences of the European Expansion, 1450-1800** Stephen V. Beck, 2022-02-16. Wherever the European has trod, death seems to pursue the aboriginal. So wrote Charles Darwin in 1836. Though there has been considerable discussion concerning their precise demographic impact reflected in the articles here, there is no doubt that the arrival of new diseases with the Europeans, such as typhus and smallpox, had a catastrophic effect on the indigenous population of the Americas and later of the Pacific. In the Americas, malaria and yellow fever also came with the slaves from Africa, themselves imported to work the depopulated land. These diseases placed Europeans at risk too, and with some resistance to both disease pools, Africans could have a better chance of survival. Also covered here is the controversy over the origins of syphilis, while the final essays look at agricultural consequences of the European expansion in terms of nutrition, both in North America and in Europe.

**Macropolitics of Nineteenth-Century Literature** Jonathan Arac, Harriet Ritvo, 2016-11-11. In contrast to the micropolitics of Foucault, macropolitics emphasizes that political transformations at the level of the state have great importance for many developments in nineteenth-century writing.

**The Earth Shall Weep** James Wilson, 1998. Provides a Native American perspective on the history of North America.

**The Canadian Historical Review**, 1920. Includes section: Recent publications relating to Canada.

**Fire, Native Peoples, and the Natural Landscape** Thomas Vale, 2013-04-16. For nearly two centuries, the creation myth for the United States imagined European settlers arriving on the shores of a vast uncharted wilderness. Over the last two decades, however, a contrary vision

has emerged one which sees the country's roots not in a state of pristine nature but rather in a human modified landscape over which native peoples exerted vast control. *Fire: Native Peoples and the Natural Landscape* seeks a middle ground between those conflicting paradigms offering a critical research based assessment of the role of Native Americans in modifying the landscapes of pre-European America. Contributors focus on the western United States and look at the question of fire regimes, the single human impact which could have altered the environment at a broad landscape scale and which could have been important in almost any part of the West. Each of the seven chapters is written by a different author about a different subregion of the West evaluating the question of whether the fire regimes extant at the time of European contact were the product of natural factors or whether ignitions by Native Americans fundamentally changed those regimes. An introductory essay offers context for the regional chapters and a concluding section compares results from the various regions and highlights patterns both common to the West as a whole and distinctive for various parts of the western states. The final section also relates the findings to policy questions concerning the management of natural areas particularly on federal lands and of the naturalness of the pre-European western landscape.

**1491** Charles C. Mann, 2005-08-09 A groundbreaking study that radically alters our understanding of the Americas before the arrival of the Europeans in 1492. Traditionally, Americans learned in school that the ancestors of the people who inhabited the Western Hemisphere at the time of Columbus's landing had crossed the Bering Strait twelve thousand years ago, existed mainly in small nomadic bands and lived so lightly on the land that the Americas was for all practical purposes still a vast wilderness. But as Charles C. Mann now makes clear, archaeologists and anthropologists have spent the last thirty years proving these and many other long-held assumptions wrong. In a book that startles and persuades, Mann reveals how a new generation of researchers equipped with novel scientific techniques came to previously unheard-of conclusions. Among them: In 1491, there were probably more people living in the Americas than in Europe. Certain cities such as Tenochtitlan, the Aztec capital, were far greater in population than any contemporary European city. Furthermore, Tenochtitlan, unlike any capital in Europe at that time, had running water, beautiful botanical gardens, and immaculately clean streets. The earliest cities in the Western Hemisphere were thriving before the Egyptians built the great pyramids. Pre-Columbian Indians in Mexico developed corn by a breeding process so sophisticated that the journal *Science* recently described it as man's first and perhaps the greatest feat of genetic engineering. Amazonian Indians learned how to farm the rain forest without destroying it, a process scientists are studying today in the hope of regaining this lost knowledge. Native Americans transformed their land so completely that Europeans arrived in a hemisphere already massively landscaped by human beings. Mann sheds clarifying light on the methods used to arrive at these new visions of the pre-Columbian Americas and how they have affected our understanding of our history and our thinking about the environment. His book is an exciting and learned account of scientific inquiry and revelation.
