Face Is Familiar:

Forensic Face Matching Markus Bindemann, 2021-01-07 In everyday life we identify faces regularly and seemingly with great ease. One might assume this to be a straightforward and highly accurate task. However, we are poor at identifying the faces of unfamiliar people who we have never met before, despite the fact that many important everyday tasks depend on this. Forensic face matching requires the comparison of two face photographs of a person who is not known to the observer. This seemingly simple task is critical for a wide range of security tasks such as person identification at airports and borders, passport issuance and renewal, and criminal identification in police investigations. Despite its ubiquity, face matching is highly prone to error even under conditions that are designed to maximally facilitate this task. For this reason, face matching has been studied extensively in Psychology, with the bulk of the research conducted since 2010. Forensic face Matching provides readers with a wide-ranging, detailed and critical overview of facial comparison and face matching, providing insights into its application, efficacy and limitations in occupational settings and of current scientific knowledge of this task. **Face**

Perception Vicki Bruce, Andrew W. Young, 2012 Human faces are unique biological structures which convey a complex variety of important social messages. Even strangers can tell things from our faces. Written in a clear and accessible style, this book will be of interest to all students studying face perception and social cognition. **Craniofacial Identification**

Caroline Wilkinson, Christopher Rynn, 2012-05-03 The promotion of CCTV surveillance and identity cards, along with ever heightened security at airports, immigration control and institutional access, has seen a dramatic increase in the use of automated and manual recognition. In addition, several recent disasters have highlighted the problems and challenges associated with current disaster victim identification. Discussing the latest advances and key research into identification from the face and skull, this book draws together a wide range of elements relating to craniofacial analysis and identification. It examines all aspects of facial identification, including the determination of facial appearance from the skull, comparison of the skull with the face, and the verification of living facial images. With sections covering the identification of the dead and of the living, it provides a valuable review of the current state of play, along with the latest research advances in this constantly evolving field. *When Face Recognition Goes Wrong* Catriona Havard, 2024-10-29

Adopting a critical stance throughout, the book explores why and how humans and machines make mistakes, covering topics including racial and gender biases, neuropsychological disorders, and widespread algorithm problems. The book features personal anecdotes alongside real-world examples to showcase the often life-changing consequences of facial recognition going wrong. These range from problems with everyday social interactions through to eyewitness identification leading to miscarriages of justice and border control, passport verification. Concluding with a look to the future of facial recognition, the author asks the world's leading experts what are the big questions that still need to be answered and can we train humans and machines to be super
