The Andes Axel Borsdorf, Christoph Stadel, 2015-03-12 The Andes are attracting global interest again; they hold valuable mineral resources, tourists appreciate their great natural beauty and the diversity of indigenous cultures, climbers scale rock and ice faces while many others are intrigued by regional political developments such as the Bolivarian revolution in Venezuela or the almost unfettered hegemony of the neoliberal economic model in Chile. This volume is the first attempt for decades to present a complete overview of the longest mountain chain on the planet, a region of remarkable climatic, floristic and geologic diversity where advanced civilization developed well before the arrival of the Spanish. Today the Andes continue to be characterized by their ethnic, demographic, cultural and economic diversity as well as by the disparity of local socioeconomic groups. The Andean countries pursue a wide range of approaches to tackle the challenges of making the best use of their natural and cultural potential without damaging their ecological basis as well as to overcome economic disparity and foster social cohesion. This book provides insights into this unique region and its most pressing issues, complemented by a wealth of pictures and comprehensive diagrams which in sum help to better understand these fascinating mountains.

The Geography of Central America and Mexico Thomas A. Rumney, 2013-04-04 Connecting the massive landscapes of North and South America are Mexico and Central America. An area of fascination and study for geographers and scholars from around the world for millennia, these lands and people have played important roles in the discoveries and distributions of civilizations, resources and nations. These regions have stimulated a large amount of research and publications across the sub-disciplines of geography. *The Geography of Central America and Mexico: A Scholarly Guide and Bibliography* by Thomas A. Rumney collects, organizes and presents as many of these publications as possible to encourage efforts in the teaching, study and continuing scholarship of the geography of this area which includes Mexico, Belize, Guatemala, Honduras, El Salvador, Nicaragua, Costa Rica and Panama. Beginning with the region as a whole, each chapter that follows, one per nation, is divided by the specific sub-disciplines of geography: cultural, social, economic, historical, physical and environmental, political and urban. Each section is further divided by document type: atlases, books, book chapters, articles from scholarly journals, master's theses and doctoral dissertations. Although the majority of entries recorded focus on English language works, selected entries written in Spanish as well as French, German and other languages are included, with entries' titles translated into English and noted accordingly.
