Spar, Asenath La Rue, 2007-04-02 Because limited training in geriatric psychiatry has tended to give insufficient attention to mental health care for the elderly clinicians often need help when assessing and treating problems specific to older clients Clinical Manual

of Geriatric Psychiatry provides a single volume reference that covers the full range of such problems from depression to dementia. It shows that psychiatrists working with older people must sometimes be willing to play a generalist's role combining routine medical management with psychiatric interventions or helping with social or situational problems. Drs Spar and La Rue review the effects of aging on cognitive performance including clinical presentations of memory loss and medication induced symptoms of mental disorder. They offer practical guidance to help the clinician not only diagnose and treat these conditions but also address such issues as evaluating competency for informed consent. Enhanced by numerous charts and tables for easy reference, the book boasts a broad range of coverage: Guidelines to differential diagnosis of depression; laboratory tests, psychological tests and symptom rating scales along with insights on new directions in psychotherapy including intervention within primary care; Assessment of both selective serotonin reuptake inhibitors and non SSRIs as first line agents for depression; citing advantages and disadvantages of specific drugs plus advice on switching or combining antidepressants; Discussion of the effective use of electroconvulsive therapy particularly the use of brief pulse bilateral electrode placement as well as experimental therapies such as repetitive transcranial magnetic stimulation and vagal nerve stimulation; Guidance in cognitive mental status examinations and brief screening tools for dementia and Alzheimer's disease focusing on the Mini Mental State Exam and summarizing advanced and experimental diagnostics such as single photon emission computed tomography and positron emission tomography; Appraisal of psychosocial therapies for patients with Alzheimer's Disease such as behavior modification and reminiscence therapy plus use of cholinesterase inhibitors for treatment of cognitive deficits; Review of approaches to anxiety disorders including differential diagnosis of phobias, generalized anxiety disorder, obsessive compulsive disorder and panic disorder with a focus on psychosocial behavior therapy and medications of choice. With life expectancies increasing, people over 85 already constitute one of the fastest growing demographics and the number of older people with mental disorders is rising as well. Clinical Manual of Geriatric Psychiatry explains how working effectively with older adults requires a blending of specialized knowledge with a flexible approach to the patient and shows how to bring that about in daily practice.

*Geriatric Psychiatry Basics* Kenneth Sakauye, 2008-04-17

Doctors who know something about working with the elderly are in greater demand than ever before. This is also true in psychiatry where the number of geriatric psychiatry specialists falls far short of the need. Because of this unbalance, general psychiatrists, many of whom have little or no training or experience in dealing with older adults and their specific issues, are now being called upon to offer care to this population. In this book, Sakauye covers issues fundamental to the field of geriatric psychiatry that are not addressed well in general adult training: Late life development; Biology of aging; Common medical illnesses associated with aging; Neurobiology of degenerative disorders; Geriatric psychopharmacology; Psychotherapeutic modifications for special populations such as patients with cognitive impairment; Multidisciplinary care and family involvement; Specific studies of older adults as a special population; differences. While specialists will find it a

useful resource for brushing up on fundamentals Geriatric Psychiatry Basics is the ideal handbook for non specialists who need a quick reference or primer on the issues central to geriatric care In it Sakauye a geriatric psychiatrist who worked closely with the elderly victims of Hurricane Katrina explores the most commonly encountered issues and problems from memory impairment Alzheimer s delirium dementia and cognitive disorders to depression psychosis anxiety substance abuse somatoform and sleep disorders Assessment diagnosis and treatment options including pharmacotherapy are addressed for each presenting problem and clinical pearls nuggets of critical information common pitfalls differentiation protocols between normal and abnormal behavior etc are clearly addressed The use of psychotherapeutic interventions for older adults as well as psychiatric care in nursing homes and other inpatient facilities is also explained making this an immensely practical and user friendly handbook for all mental health professionals on how to deliver proper geriatric mental health services
