Department of the Army, 1982 German Tank Maintenance in World War II Department Of the Army, 2017-01-03 From the Introduction Even before the outbreak of World War II German experts in armored warfare realized that a well functioning tank maintenance system would be essential Initially a centralized system was planned in which only minor repairs would be carried out in the field and tanks that had sustained more serious damage would be returned to the factory of origin in the zone of interior During the short Polish campaign in September 1939 this system worked well and very few difficulties were encountered As soon as Poland had been conquered the armored divisions returned to their respective peacetime garrisons in Germany where all vehicles were quickly repaired and restored to maximum efficiency at depot maintenance installations and tank production plants The French campaign of May June 1940 presented only a few maintenance problems Minor organizational deficiencies that had first cropped up during the Polish campaign were corrected and the strength of the organic maintenance personnel was increased A large tank spare parts depot from which the armored forces drew their supplies was established in northern France At the end of the campaign which lasted only 6 weeks most of the armored divisions returned once more to their garrisons in Germany Those divisions remaining in France were able to utilize the services and facilities of the many former French Army repair shops Moreover the distance to the tank factories in Germany was relatively short As a result all armored divisions were combat ready shortly after the conclusion of the French campaign During the campaigns in the Balkans in the spring of 1941 the Germans committed numerous panzer divisions These campaigns were also short and involved few tank losses most of them caused by bad road conditions and accelerated march movements during which it was not always possible to perform preventive maintenance After the conclusion of the operations against Yugoslavia and Greece the armored divisions were rehabilitated in the zone of interior and transferred to assembly areas for the campaign against Russia *German Tank Maintenance in*

The author of Case White The Invasion of Poland delves into the strategy and weaponry of armored warfare during the early years of the Russo German War The German panzer armies that swept into the Soviet Union in 1941 were an undefeated force that had honed their skill in combined arms warfare to a fine edge The Germans focused their panzers and tactical air support at points on the battlefield defined as Schwerpunkt main effort to smash through any defensive line and then advance to envelope their adversaries Initially these methods worked well in the early days of Operation Barbarossa and the tank forces of the Red Army suffered defeat after defeat Although badly mauled in the opening battles the Red Army s tank forces did not succumb to the German armored onslaught and German planning and logistical deficiencies led to over extension and failure in 1941 In the second year of the invasion the Germans directed their Schwerpunkt toward the Volga and the Caucasus and again achieved some degree of success but the Red Army had grown much stronger and by November 1942 the Soviets were able to turn the tables at Stalingrad Robert Forczyk s incisive study offers fresh insight into how the two most powerful mechanized armies of the Second World War developed their tactics and weaponry during the critical early years of the Russo German War He uses German Russian and English sources to provide the first comprehensive overview and analysis of armored warfare from the German and Soviet perspectives His analysis of the greatest tank war in history is compelling reading Includes photos

Tank Warfare, 1939-1945 Simon Forty,Jonathan Forty,2020-07-19 Packed with archival photos a fascinating account of armored warfare in WWII and how tank design and tactics were transformed during the period On the battlefields of Europe and North Africa during the Second World War tanks played a key role and the intense pressure of combat drove forward tank design and tactics at an extraordinary rate In a few years on all sides tank warfare was transformed This is the dramatic process that Simon and Jonathan Forty chronicle in this heavily illustrated history They describe the fundamentals of pre war tank design and compare the theories formulated in the 1930s as to how they should be used in battle Then they show how the harsh experience of the German blitzkrieg campaigns in Poland France and the Soviet Union compelled the Western Allies to reconsider their equipment organization and tactics and how the Germans responded to the Allied challenge The speed of progress is demonstrated in the selection of over 180 archive photographs which record as only photographs can the conditions of war on each battle front They also give a vivid impression of what armored warfare was like for the tank
