describes the different tools that have been developed during the last decades to explain how scientists study volcanoes. It takes into consideration volcanology as being a complex field at the interface between geology, geochemistry and geophysics and provides information about these aspects to embrace the diversity of a volcanic system. The book also provides an outlook to which direction this research is leading. It offers a hands-on experience directly useful if the reader wants to start applying the principles exposed.

Geo-Spatial Technologies in Urban Environments Ryan R. Jensen, Jay D. Gatrell, Daniel D. McLean, 2005. The purpose of this book is to investigate and develop alternate methodological approaches to understand urban environments and urban change. In particular, the study demonstrates the application of remote sensing data and geographic information systems to the exploration of issues often ignored by the mainstream community of geo-technical specialists such as urban forestry, urban traffic migration or quality of life in urban areas. Case studies show how disciplines like environmental science and planning, sociology, landscape ecology and architecture, regional science and policy design and assessment can benefit from employing remote sensing data and GIS.

Computational Geo-Electromagnetics Viacheslav V. Spichak, 2020-02-01. Computational Geo-Electromagnetics: Methods, Models and Forecasts, Volume Five in the Computational Geophysics series, is devoted to techniques for building of geoelectrical models from electromagnetic data featuring Bayesian statistical analysis and neural network algorithms. These models are applied to studying the geoelectrical structure of famous volcanoes i.e. Vesuvius, Kilauea, Elbrus, Komagatake, Hengill and geothermal zones i.e. Travale, Italy, Soultz-sous-Forets, Alsace. Methodological recommendations are given on electromagnetic sounding of faults as well as geothermal and hydrocarbon reservoirs. Techniques for forecasting of petrophysical properties from the electrical resistivity as proxy parameter are also considered. Computational Geo-Electromagnetics: Methods, Models and Forecasts offers techniques and algorithms for building geoelectrical models under conditions of rare or irregularly distributed EM data and/or lack of prior geological and geophysical information. This volume also includes methodological guidelines on interpretation of electromagnetic sounding data depending on goals of the study. Finally, it details computational algorithms for using electrical resistivity for properties beyond boreholes. Provides algorithms for inversion of incomplete rare or irregularly distributed EM data. Features methodological issues of building geoelectrical models. Offers techniques for retrieving petrophysical properties from EM sounding data and well logs.
