New Risks: Issues and Management Louis A. Cox,Paolo F. Ricci,2013-06-29 This volume contains the proceedings of the 1986 annual meeting and conference of the Society for Risk Analysis It provides a detailed view of both mature disciplines and emerging areas within the fields of health safety and environmental risk analysis as they existed in 1986 In selecting and organizing topics for this conference we sought both i to identify and include new ideas and application areas that would be of lasting interest to risk analysts and to users of risk

analysis results and ii to include innovative methods and applications in established areas of risk analysis In the three years since the conference many of the topics presented there for the first time to a broad risk analysis audience have become well developed and sometimes hotly debated areas of applied risk research Several such as the public health hazards from indoor air pollutants radon in the home high voltage electric fields and the AIDS epidemic have been the subjects of headlines since 1986 Older areas such as hazardous waste site ranking and remediation air emissions dispersion modeling and exposure assessment transportation safety seismic and nuclear risk assessment and occupational safety in the chemical industry have continued to receive new treatments and to benefit from advances in quantitative risk assessment methods as documented in the theoretical and methodological papers in this volume A theme of the meeting was the importance of new technologies and the new and uncertain risks that they create *Acceptable Evidence* Deborah G. Mayo, Rachelle D.

Hollander, 1994-02-17 Discussions of science and values in risk management have largely focused on how values enter into arguments about risks that is issues of acceptable risk Instead this volume concentrates on how values enter into collecting interpreting communicating and evaluating the evidence of risks that is issues of the acceptability of evidence of risk By focusing on acceptable evidence this volume avoids two barriers to progress One barrier assumes that evidence of risk is largely a matter of objective scientific data and therefore uncontroversial The other assumes that evidence of risk being just a matter of values is not amenable to reasoned critique Denying both extremes this volume argues for a more constructive conclusion understanding the interrelations of scientific and value issues enables a critical scrutiny of risk assessments and better public deliberation about social choices The contributors distinguished philosophers policy analysts and natural and social scientists analyze environmental and medical controversies and assumptions underlying views about risk assessment and the scientific and statistical models used in risk management **Drought and the Human Story** R.L.

Heathcote, 2016-05-13 Drought has been a long companion in the human story Mythologised as the devastating Bull of Heaven in one of the earliest heroic legends to come out of Mesopotamia drought has continued to wreak havoc upon societies in many cases playing a significant role in their final demise For societies in the 21st Century drought hovers on all horizons the ultimate drought proofing of society long sought remains elusive This study of the human conceptualization of drought in a global setting examines the historical record from early human society through to present day concerns to explore how and why attitudes to drought have changed and why the mitigation of its impacts has become more difficult To offer a more lasting strategy for protection against drought the author argues that physical scientists need to combine their skills in understanding global ecology and their technological expertise with the social scientists awareness of the socio economic political and cultural contexts in which modern societies operate Both will have to ensure that their cooperative strategies for drought management will be understood and supported by the public If this cooperation can be achieved the future rampages of the Bull of Heaven may be contained **Corporate Management Of Health And Safety Hazards**

Roger E. Kasperson, 2019-04-09 This book provides one of the first systematic accounts of how corporations manage risk to workers and consumers. Careful analysis and interviewing in different corporations elicit a portrait of the myriad hazards that currently confront industry, the corporate programs and resources that have emerged since 1970 to respond to this challenge, and factors that have contributed to successes and failures. In-depth studies of the Volvo Car Corporation, Rocky Flats nuclear weapons plant, Union Carbide's Bhopal facility, and large chemical and pharmaceutical corporations provide a state-of-the-art assessment of the advances and problems inherent today in industrial safety management.

Roger E. Kasperson and Jeanne X. Kasperson and Christoph Hohenemser are senior researchers at Clark University's Center for Technology, Environment, and Development (CENTED). Roger E. Kasperson is Director of CENTED and its Hazard Assessment Group. Jeanne X. Kasperson is Research Librarian at CENTED and Senior Research Associate in Brown University's World Hunger Program. Hohenemser, a professor of physics, directs the Environment, Technology, and Society Program at Clark University. Robert W. Kates, formerly with CENTED, is Director of the Alan Shawn Feinstein World Hunger Program at Brown University. Ola Svenson, of the Department of Psychology at Lund University in Sweden, is a leading researcher in the field of risk perception and decision analysis.
