Gochman, 1988-08-31 HEALTH BEHAVIOR AS BASIC RESEARCH Health behavior is not a traditional discipline but a newly emerging interdisciplinary field It is still in the process of establishing its identity Few institutional or organizational

structures i e departments and programs reflect it and few books and journals are directed at it The primary objective of this book is thus to identify and establish health behavior as an important area of basic research worthy of being studied in its own right As a basic research area health behavior transcends commitment to a particular behavior a specific illness or health problem or a single set of determinants One way of achieving this objective is to look at health behavior as an outcome of a range of personal and social determinants rather than as a set of risk factors or as targets for intervention strategies directed at behavioral change The book is thus organized pri marily in terms of the size of the determinants of concern rather than in terms of specific health behaviors or specific health problems or conditions With the first part of the book establishing working definitions of health behavior and health behavior research as basic frameworks the second part moves from smaller to larger systems informing the reader about basic research that demonstrates how health behavior is determined by personal family social institutional and cultural factors. These distinctions reflect some arbitrar iness the family organizations and institutions for example are social units **Handbook of Health Behavior Research I** David S. Gochman,1997-08-31 The primary objective of this Handbook is to provide statements about health behaviour research as a basic body of knowledge moving into the 21st century It is expected that the Handbook will remain in use and current through 2005 at least The Handbook presents a broad and representative selection of mid 1990s health behaviour findings and concepts in a single work While texts and books of readings are available in related areas such as health psychology medical anthropology medical sociology behavioural health behavioural risk factors and changing health behaviours none of these works was intended to address basic research generated knowledge of health behaviour and none was intended to transcend individual disciplines Accordingly none of these works presents a broad and representative spectrum of basic health behaviour research reflecting multidisciplinary activities One work with a title identical to this one but for one word the Handbook of Health Behaviour Change Shumaker et al 1990 deals almost exclusively with applications This Handbook thus presents the reader with the state of the art in health behaviour research something not found elsewhere The Handbook of Health Behavior Change Angie L. Cradock, Kristina Henderson Lewis, Justin B. Moore, 2024-08-23 Now in its 6th edition The Handbook of Health Behavior Change continues to serve as the premier practical textbook for students researchers and health professionals in public health health promotion preventive and behavioral medicine nursing health communication population health and the behavioral sciences It presents a foundational review of key theories methods and intervention strategies they will need to be both thoughtful and effective in promoting positive health behavior change The book examines the complex challenges of improving health behavior in society including the upstream systems economic environmental social cultural and policy factors at play as well as the interpersonal and intrapersonal behaviors that lead to disparate health outcomes among individuals and populations Integrated throughout are applied case studies and real world examples focusing on the importance of health equity considerations for health behavior change and how to apply an equity
