Health Care Ethics A Theological Analysis:

Health Care Ethics Benedict M. Ashley, 2006-11-22 *Health Care Ethics* is a comprehensive study of significant issues affecting health care and the ethics of health care from the perspective of Catholic theology. It aims to help Christian and especially Catholic health care professionals solve concrete problems in terms of principles rooted in scripture and tested by individual experience; however, its basis in real medical experience makes this book a valuable resource for anyone with a general interest in health care ethics. This fifth edition, which includes important contributions by Jean deBlois C S J, considers everyday ethical questions and dilemmas in clinical care and deals more deeply with issues of women's health, mental health, sexual orientation, artificial reproduction, and the new social issues in health care. The authors devote special attention to the various ethical theories currently in use in the United States while clearly presenting a method of ethical decision making based in the Catholic tradition. They discuss the needs of the human person, outlining what it means to be human both as an individual and as part of a community. This volume has been significantly updated to include new discussions of recent clinical innovations and theoretical issues that have arisen in the field: the Human Genome Project, efforts to control sexual selection of infants, efforts to genetically modify the human genotype and phenotype, the development of palliative care as a medical specialty, the acceptance of non-heart-beating persons as organ donors, embryo development, and stem cell research, reconstructive and cosmetic surgery, nutrition, and obesity. Medical mistakes, the negative effects of managed care on the patient-physician relationship, recent papal allocution regarding care of patients in a persistent vegetative state, and palliative care for dying patients.

Health Care Ethics: Critical Issues for the 21st Century Eileen E. Morrison, 2008-03-20

Critical Care Ethics David F. Kelly, 2002-06-11 In Critical Care Ethics David F Kelly describes and analyzes some of the major ethical issues facing American hospitals today and proposes practical approaches by which hospitals may ethically and legally resolve them The author includes both theory and application in a way which insures accessibility to those without a background in moral philosophy or moral theology The book's major emphasis is on the resolution within the American hospital of the practical question of forgoing treatment Its central thesis is that a consensus has arisen in American medical ethics concerning the ethical and legal rightness of forgoing medical treatment in some circumstances The present consensus is based on three pillars The first two of these are ethical principles and distinctions arising from Catholic medical ethics which have been generally accepted in American hospital ethics and American law The third is the development of American law itself Together these three bases have resulted in general agreement that Americans have the right to refuse treatment for themselves and that with some reservations they have the right to forgo treatment for others as well These issues are developed in detail including application to the question of medical nutrition and analysis of the decision In addition there are chapters on pain management ethics committees and the problems of resource allocation The final chapter attempts to point out some of the difficulties inherent in allocation arguments and criticizes the way in which they are so often made by many ethicists and religious leaders

Seminary and Michael Novak Ave Maria University The work will appeal to anyone who is looking for a clear and accurate introduction to Catholic social thought **What to Do with the Least of Our Brothers?** Fr. C. Ryan McCarthy, It seems at times unthinkable that a book like this would have to be written although I am relatively sure that Aldous Huxley foresaw its necessity when he wrote Brave New World But the time has arrived where babies are manufactured in sterile facilities and tested for their fitness for life in the world While we have not yet advanced sufficiently in biological sciences to entirely forego natural gestation in favor of prenatal programming process which Huxley describes we have reached the point where those unwanted embryos are set aside freeze dried and abandoned or destroyed when they do not meet the standard set for a child This book affirms the intrinsic goodness of the life of each embryo and explores from the Catholic perspective the possibility of frozen embryo rescue by adoption It looks at those arguments which see the elements of in vitro fertilization as so contrary to the faith and the natural law as to be irrecoverably intrinsically evil and rejects those in favor of a small and narrow path of adoption to fully re incorporate a child through the love of a mother and a father into the society which abandoned it
