Sea Grant Publications Index, 1974 **The Law of the Sea** Nele Matz-Lück, Øystein Jensen, Elise Johansen, 2022-09-19 The United Nations Convention on the Law of the Sea follows a comprehensive approach and can be interpreted dynamically to include the regulation of all potential human uses of the ocean but the law of the sea cannot be viewed in isolation from other fields of international law International law does not resemble a hierarchically structured legal system its different parts interact when different rules address the same activity or situation The academic discussion concerning the specialization and proliferation of international legal rules and dispute settlement bodies has theoretical as well as practical relevance for the law of the sea and its interaction with other parts of international law The intensified use of the oceans for different purposes and the ongoing proliferation of international rules addressing different activities from different perspectives and with distinct foci require a more thorough evaluation of how the law of the sea relates to other fields of international law how the normative context can be approached theoretically and if interdisciplinary interfaces can be adequately addressed This book discusses the normative context of the law of the sea and the interactions of the law of the sea with other legal regimes By connecting high quality research with new ideas and perspectives this book offers expertise from different fields and perspectives in which the interaction between the law of the sea and other fields of international law becomes particularly relevant [Keystone Species That Live in the Sea and Along the Coastline](#) Bonnie Hinman, 2015-09 Most arches built today contain a single building block at the top that is the most important piece This special piece can be

found in the arches of soaring cathedrals doorways in temples and even simple buildings made out of wooden blocks It is called a keystone and it holds everything else together Remove the keystone and the building or doorway is likely to collapse The same thing is true in nature Certain species of animals and plants are so important to their ecosystems that if they disappear the whole system may collapse They are called keystone species Some keystone species are large like white rhinos while others are quite small like honey bees But size doesn't matter in an ecosystem All living things rely on other species to survive A keystone species plays an especially large role that affects many different species in an ecosystem Some keystone species are at the top of a huge ecosystem like the Greater Yellowstone Ecosystem while others may affect a tiny ecosystem in a river or forest Whether the ecosystem is big or small the result of a keystone species disappearing or being greatly reduced is the same Just like one falling domino can cause many others to fall the loss of a keystone species can lead to the extinction of many other species Today scientists are focusing more attention on preserving the natural balance in ecosystems Identifying and protecting keystone species is an important part of their work
