**Fossil Footprints of Western North America** Martin G. Lockley, Spencer G. Lucas, 2014-11-01 *Footprints on the Horizon* Stephanie Grace Whitson, 2005 A Nazi prisoner of war comes to Fort Robinson and falls in love with a local rancher's daughter but doubts there can be any future for them Far from home and ostracized by those around him he comes to know the God who loves unconditionally Dinosaur Footprints & Trackways of La Rioja Félix Pérez-Lorente, 2015-07-06 A guide to this fossil rich area of Spain Likely to become a landmark reference in dinosaur ichnology James O Farlow During the Early Cretaceous lakes meandering streams and flood plains covered the region where the current foothills of Rioja now exist Today the area is known for its wine and for the dozens of sites where footprints and trackways of dinosaurs amphibians and even pterosaurs can be seen The dinosaurs that lived here 120 million years ago left their footsteps imprinted in the mud and moist soil Now fossilized in rock they have turned Rioja into one of the most valuable dinosaur footprint sites in all of Europe Félix Pérez Lorente and his colleagues have published extensively on the region mostly in Spanish language journals In this volume Pérez Lorente provides an up to date synthesis of that research in English He offers detailed descriptions of the sites footprints and trackways and explains what these prints and tracks can tell us about the animals who made them **Late**

**Triassic Footprint Fauna from the Culpeper Basin, Northern Virginia (U.S.)** Robert E. Weems, 1987 Thousands of footprint impressions probably of Norian age have been discovered on a single bedding plane in a quarry in the Culpeper Basin of N Virginia About 830 tracks on this bedding surface contained in 32 recognizable trackways were studied in detail The other tracks were too obscure for meaningful analysis Herbivores greatly outnumber carnivores small herbivores are more abundant than large ones The order of appearance of these trackmakers suggests that smaller less agile species preferred soft ground whereas larger carnivorous forms preferred a firmer substrate From the measured print sizes stride lengths pace angles it was possible to estimate the hip height body length Froude numbers speed of each trackmaker Illus

**The Triassic-Jurassic Terrestrial Transition** Jerry D. Harris, Spencer G. Lucas, Justin A. Speilmann, Martin G. Lockley, Andrew R.C. Milner, James I. Kirkland, 2006-01-01 *Late Triassic Footprint Fauna from the Culpeper Basin, Northern Virginia (U. S. )* Robert Weems, 2007-12 Thousands of footprint impressions probably of Norian age have been discovered on a single bedding plane in a quarry in the Culpeper Basin of N Virginia About 830 tracks on this bedding surface contained in 32 recognizable trackways were studied in detail The other tracks were too obscure for meaningful analysis Herbivores greatly outnumber carnivores small herbivores are more abundant than large ones The order of appearance of these trackmakers suggests that smaller less agile species preferred soft ground whereas larger carnivorous forms preferred a firmer substrate From the measured print sizes stride lengths pace angles it was possible to estimate the hip height body length Froude numbers speed of each trackmaker Illus **Human Footprints: Fossilised Locomotion?** Matthew R. Bennett, Sarita A. Morse, 2014-08-20 Human footprints provide some of the most emotive and tangible evidence

of our ancestors They provide evidence of stature presence behaviour and in the case of early hominin footprints evidence with respect to the evolution of human gait and foot anatomy While human footprint sites are rare in the geological record the number of sites around the World has increased in recent years along with the analytical tools available for their study The aim of this book is to provide a definitive review of these recent developments with specific reference to the increased availability of three dimensional digital elevation models of human tracks at many key sites The book is divided into eight chapters Following an introduction the second chapter reviews modern field methods in human ichnology focusing on the development of new analytical tools The third chapter then reviews the major footprint sites around the World including details on several unpublished examples Chapters then follow on the role of geology in the formation and preservation of tracks on the inferences that can be made from human tracks and the final chapter explores the application of this work to forensic science Audience This volume will be of interest to researchers and students across a wide range of disciplines sedimentology archaeology forensics and palaeoanthropology

*Sankaran Is Again on the Coconut Tree* Jo Nambiar, 2016-10-31 Kerala is a destination on the world tourist map It is often referred to as Gods Own Country The place has been visited by foreigners from all over the globe for five thousand years at least To give an insight into the mysteries of this place and events that occurred over many many years Sankaran an immortal takes the reader through very gripping thrilling and thought provoking situations and in the process demystifies the Malayalee

**Bulletin of the United States Geological Survey**, 1891 *Index to the Known Fossil Insects of the World, Including Myriapods and Arachnids* Samuel Hubbard Scudder, 1891 **Dinosaur Tracks and Traces** David D. Gillette, Martin G. Lockley, 1989 This is the first book ever to be devoted to this subject **Fossil Footprints from the Grand Canyon** Charles Whitney Gilmore, 1927 *Making One's Way in the World* Martin Bell, 2020-02-28 The book draws on the evidence of landscape archaeology palaeoenvironmental studies ethnohistory and animal tracking to address the neglected topic of how we identify and interpret past patterns of movement in the landscape It challenges the pessimism of previous generations which regarded prehistoric routes such as hollow ways as generally undatable The premise is that archaeologists tend to focus on sites while neglecting the patterns of habitual movement that made them part of living landscapes Evidence of past movement is considered in a multi scalar way from the individual footprint to the long distance path including the traces created in vegetation by animal and human movement It is argued that routes may be perpetuated

over long timescales creating landscape structures which influence the activities of subsequent generations In other instances radical changes of axes of communication and landscape structures provide evidence of upheaval and social change Palaeoenvironmental and ethnohistorical evidence from the American North West coast sets the scene with evidence for the effects of burning animal movement faeces deposition and transplantation which can create readable routes along which are favoured resources Evidence from European hunter gatherer sites hints at similar practices of niche construction on a range of spatial scales On a local scale footprints help to establish axes of movement the locations of lost settlements and activity areas Wood trackways likewise provide evidence of favoured patterns of movement and past settlement location Among early farming communities alignments of burial mounds enclosure entrances and other monuments indicate axes of communication From the middle Bronze Age in Europe there is more clearly defined evidence of trackways flanked by ditches and fields Landscape scale survey and excavation enables the dating of trackways using spatial relationships with dated features and many examples indicate long term continuity of routeways Where fields flank routeways a range of methods including scientific approaches provide dates Prehistorians have often assumed that Ridgeways provided the main axes of early movement but there is little evidence for their early origins and rather better evidence for early routes crossing topography and providing connections between different environmental zones The book concludes with a case study of the Weald of South East England which demonstrates that some axes of cross topographic movement used as droveways and generally considered as early medieval can be shown to be of prehistoric origin One reason that dryland routes have proved difficult to recognise is that insufficient attention has been paid to the parts played by riverine and maritime longer distance communication It is argued that understanding the origins of the paths we use today contributes to appreciation of the distinctive qualities of landscapes Appreciation will help to bring about effective strategies for conservation of mutual benefit to people and wildlife by maintaining and enhancing corridors of connectivity between different landscape zones including fragmented nature reserves and valued places In these ways an understanding of past routeways can contribute to sustainable landscapes communities and quality of life **NASA Reference Publication** ,1977 **Paradigm Shift to**

**Effects-Based Space: Near-Space as a Combat Space Effects Enabler** ,2005 This paper is an outgrowth of comments I heard and attitudes I experienced at the JFCOM Joint Space Concept Development and Experimentation Workshop in Norfolk at the end of March 2004 I presented a briefing on near space at the conference along with colleagues from JFCOM the Army Space and Missile Defense Battlelab the Naval Research Laboratory and the Navy Warfare Development Command It discussed how many functions that are currently done with satellites could be performed for tactical and operational commanders using near space assets much more cheaply and with much greater operational utility The briefing was very well received with nothing but positive comments all around However once we broke into focus groups trying to develop exercise inputs for such subjects as operationally responsive space the near space concept was almost forgotten It didn t fit

into the normal mindset of what space meant so it was difficult to convince other group members that it should be discussed in the same breath as say a TacSat type program After much thought it was my perception that the problem was one of mindset as to what the word space meant to the warfighter After reading space doctrine Army Navy Air Force and Joint I discovered that the mindset I sensed at the workshop had actually been codified to define space as a place where we operate satellites That mindset is counterproductive *Carnegie Institution of Washington Publication* ,1916 Studies ...
