Brenner, 2003-12-29 This volume introduces the laboratory terms that are crucial to the interpretation and understanding of laboratory report findings The definitions and accompanying illustrations come from various disciplines including toxicology drug chemistry criminalistics bioscience DNA firearms ballistics forensic pathology and law The illustrations communicate the use of laboratory instruments and investigative and laboratory methods of analysis These detailed definitions and illustrations are valuable references to nonscientific professionals including police investigators interpreting lab reports court reporters and prosecutors and defense attorneys preparing for trial **Failed Evidence** David A Harris, 2023-11-21 With the popularity of crime dramas like CSI focusing on forensic science and increasing numbers of police and prosecutors making wide spread use of DNA high tech science seems to have become the

handmaiden of law enforcement But this is a myth asserts law professor and nationally known expert on police profiling David A Harris In fact most of law enforcement does not embrace science it rejects it instead resisting it vigorously The question at the heart of this book is why Eyewitness identifications procedures using simultaneous lineups showing the witness six persons together as police have traditionally done produces a significant number of incorrect identifications Interrogations that include threats of harsh penalties and untruths about the existence of evidence proving the suspect s guilt significantly increase the prospect of an innocent person confessing falsely Fingerprint matching does not use probability calculations based on collected and standardized data to generate conclusions but rather human interpretation and judgment Examiners generally claim a zero rate of error an untenable claim in the face of publicly known errors by the best examiners in the U S Failed Evidence explores the real reasons that police and prosecutors resist scientific change and it lays out a concrete plan to bring law enforcement into the scientific present Written in a crisp and engaging style free of legal and scientific jargon Failed Evidence will explain to police and prosecutors political leaders and policy makers as well as other experts and anyone else who cares about how law enforcement does its job where we should go from here Because only if we understand why law enforcement resists science will we be able to break through this resistance and convince police and prosecutors to rely on the best that science has to offer Justice demands no less Visit the author s blog here

McKasson, 2000 The first edition of this text published by Elsevier in 1990 is probably in every footwear examiner's library so it is easy to say that the second edition belongs there too Small improvements were made throughout although the first edition will no doubt remain a classic reference a benchmark in its time Alas Tempus Fugit and the new edition is necessary to provide many needed updates to the original text particularly in the chapter on enhancement of impressions The new edition's format is a little larger than the first edition allowing some of the photographs to be enlarged although the contrast is higher in the original so the improvement is debatable Three new chapters added at the end of the book represent the major change to the work The chapter devoted to the evidence in the O J Simpson case is a highlight of course If you have the first edition and like it by all means get the second edition *Footwear Impression Evidence* William J.
