Extracellular Matrix Components:

The Extracellular Matrix: an Overview Robert Mecham, 2011-02-16 Knowledge of the extracellular matrix ECM is essential to understand cellular differentiation tissue development and tissue remodeling This volume of the series Biology of Extracellular Matrix provides a timely overview of the structure regulation and function of the major macromolecules that make up the extracellular matrix It covers topics such as collagen types and assembly of collagen containing suprastructures basement membrane fibronectin and other cell adhesive glycoproteins proteoglycans microfibrils elastin fibulins and matricellular proteins such as thrombospondin It also explores the concept that ECM components together with their cell surface receptors can be viewed as intricate nano devices that allow cells to physically organize their 3 D environment Further the role of the ECM in human disease and pathogenesis is discussed as well as the use of model organisms in elucidating ECM function *Extracellular Matrix Components* Erkki Ruoslahti, E. Engvall, Eva Engvall, 1994 This publication presents a collection of essays that reflect current research and technical advances in extracellular matrix field which has undergone remarkable expansion since publication of Volume 82 of Methods in Enzymology in 1982

Composition and Function of the Extracellular Matrix in the Human Body Francesco Travascio, 2016-06-15 The extracellular matrix ECM is an ensemble of non cellular components present within all tissues and organs of the human body The ECM provides structural support for scaffolding cellular constituents and biochemical and biomechanical support for those events leading to tissue morphogenesis differentiation and homeostasis Essential components of all ECMs are water proteins and polysaccharides However their composition architecture and bioactivity greatly vary from tissue to tissue in relation to the specific role the ECM is required to assume This book overviews the role of the ECM in different tissues and organs of the human body

Structure and Function of the Extracellular Matrix Bela Suki, 2021-11-27 Structure and Function of the Extracellular Matrix A Multiscale Quantitative Approach introduces biomechanics and biophysics with applications to understand the biological function of the extracellular matrix in health and disease A general multiscale approach is followed by investigating behavior from the scale of single molecules through fibrils and fibers to tissues of various organ systems Through mathematical models and structural information quantitative description of the extracellular matrix function is derived with tissue specific details The book introduces the properties and organization of extracellular matrix components and quantitative models of the matrix and guides the reader through predicting functional properties This book integrates evolutionary biology with multiscale structure to quantitatively understand the function of the extracellular matrix This approach allows a fresh look into normal functioning as well as the pathological alterations of the extracellular matrix Professor Suki's book is written to be useful to undergraduates graduate students and researchers interested in the quantitative aspects of the extracellular matrix Researchers working in mechanotransduction respiratory and cardiovascular mechanics and multiscale biomechanics of tendon cartilage skin and bone may also be interested in this book Examines the

Kleinman,1993-11-03 Studies on the components of the extracellular matrix have expanded recently and greatly increased our understanding of their biological functions and roles in development and in disease Because so many new areas have been defined selection of chapter topics was difficult to limit Areas with recent developments in both basic knowledge and diseased states have been emphasized Some of the chapters detail evolving frontiers which are of intense interest but complete information is not known For example several bone morphogenetic factors have been described and others likely exist The structures of these multifunctional proteins are determined and they appear related The description of extracellular matrix component receptors is far from complete but worthy of a progress report since much is already known Of particular interest is the promiscuity of some of these receptors in their interaction with more than one matrix protein and even different ligand specificities on different cell types Such variability these interactions challenges conventional ideas on the specificity of ligand receptor interactions The collagens were traditionally thought of as structural molecules but now have been found to be biologically active The number of genetically distinct collagen genes is greater than 27 still increasing and their gene regulation is unique The demonstration of a bi directional promoter for the 1 and 2 collagen IV chains has stimulated research on gene regulation and the DNA binding proteins A number of diseases have also been shown recently to involve collagens The proteoglycans have been thought of as largely carbohydrate containing molecules with the research emphasis placed on the sugars With the recent DNA sequencing of several protein cores these molecules have been found to be of tremendous interest The basement membrane heparan sulfate proteoglycan contains domains with homologies to laminin immunoglobulin and LDL

Proteoglycans have multiple activities and function as adhesion factors cellular receptors growth factor binding sites etc Several chapters are devoted to whole basement membrane and to other matrix components such as fibronectin thrombospondin laminin collagen IV entactin nidogen and elastin which have been shown to have remarkable effect on normal and malignant cell behavior The structures of these matrix components have been described and now active sites as well as alternate forms are being defined The role in tumor growth and acquired and genetic diseases is also reviewed The potential clinical use of the molecules or active sites is only briefly mentioned but likely to be important in the future

Microbial Biofilm Dynamics Ashutosh Kumar Shukla, Douglas Roberto Monteiro, 2025-08-01. This book explores the dynamics of microbial biofilms, examining their role in both oral and systemic diseases, emphasizing developmental models and presenting various characterization and detection methodologies. Divided into three sections, the introductory section covers fundamental concepts including microbial biofilm understanding, the critical role of the extracellular matrix, antimicrobial resistance mechanisms, and the relevance of biofilms to the dental and medical fields. It also explores the development of novel antimicrobial therapeutic strategies for biofilm control, including diverse approaches like light, nanoparticle, peptide, phage, and phytochemical-based strategies, along with surface modification techniques. The second section navigates the diverse spectrum of biofilm complexity, introducing laboratory models such as microtiter plate formation, dynamic formation, active attachment, and in situ and in vivo formation models, thus providing a comprehensive understanding of experimental setups. The third section focuses on crucial analytical methods for biofilm studies, covering techniques for quantifying total biomass, cultivable cells, and metabolism. It further describes technical approaches to biofilm matrix analysis, Omics techniques, flow cytometry analysis, imaging techniques, and the electrochemical detection of biofilms. An overview of machine learning approaches in biofilm research is also covered. This book is tailored for researchers, scientists, and students of microbiology. *Cumulated Index Medicus*, 1994.
