**Extreme Ultraviolet Astronomy** Martin A. Barstow, Jay B. Holberg, 2003-03-13 This text describes the development of astronomy in the Extreme Ultraviolet EUV wavelength range from the first rocket based experiments in the late 1960s through to later satellite missions Discussions of the results from important space projects are followed by an analysis of the contributions made by EUV astronomy to the study of specific groups of astronomical objects Within this framework the book provides detailed material on the tools of EUV astronomy dealing with the instrumentation observational techniques and modelling tools for the interpretation of data Prospects for future EUV missions are discussed and a catalogue of the known EUV sources is included This book will be of great value to graduate students and researchers It gives a complete overview of Extreme Ultraviolet astronomy     **Extreme ultraviolet astronomy ; 1**, 1989     Extreme Ultraviolet Astronomy Roger F. Malina, 1996-01-31 From the beginning of Space Astronomy the Extreme Ultraviolet band of the spectrum roughly defined as the decade in energy from 90 900 was deemed to be the unobservable ultraviolet. Pioneering results from an EUV telescope on the Apollo Soyuz Mission in 1975 forcibly demonstrated that this view was incorrect but it required the all sky surveys of the English Wide Field Camera and the Extreme Ultraviolet Explorer to demonstrate the broad potential of this field. Over 700 EUV sources have now been detected. Over 150 researchers from 16 countries gathered to share results in this new field at the International Astronomical Union Colloquium No 152. Papers were presented on a wide variety of topics including cool star coronae, white dwarf atmospheres and evolution, neutron stars, the Io torus, cataclysmic variable stars, active galactic nuclei, the interstellar medium, winds and atmospheres of early type stars and EUV plasma diagnostics. Page, 2013-10-22 This is the first volume in the new COSPAR Colloquia series which will provide a forum for an in depth discussion on selective topics of importance to the international community. The International Heliospheric Study (IHS) was initially approved by COSPAR in 1982 when it was anticipated that the study would centre on the ESA/NASA Ulysses spacecraft. This mission was delayed until October 1990 but it was decided to commence the study in 1986 in order to exploit the existence of the Pioneer 10 and 11 and the Voyager 1 and 2 spacecraft in the outer heliosphere. The primary purpose of Physics of the Outer Heliosphere is to study the three dimensional structure of the solar wind and interplanetary magnetic field carried by it, the propagation of energetic solar particles throughout the heliosphere and the modulation of galactic cosmic rays by the heliosphere. This volume provides information for scientists interested in spectroscopic studies of the local interstellar medium, galactic and solar cosmic ray populations in the outer heliosphere and also plasma and magnetic field aspects of the distant solar wind      **NASA Office of Aeronautics and Space Technology Summer Workshop, August 3 Through 16, 1975, Conducted at Madison College, Harrisonburg, Virginia: Structures and dynamics**, 1975      **Extreme Ultraviolet Explorer**, 1992      **Astronomy and the Extreme Ultraviolet Explorer Satellite** Stuart C.
