"Humankind is paying an enormous health and environmental price for weaponizing the atom. When we think of the victims, the image is that of a Japanese *A-bomb* (victim of radiation). The word is Japanese; the victims, though, are worldwide, as this book rivetingly documents."

—Bernard Lown, M.D., co-founder of the International Physicians for the Prevention of Nuclear War and a recipient of the 1985 Nobel Peace Prize.

...

"*Exposure* is professionally written and easy to read. It is an important contribution to our research and knowledge related to the dangers of radiation in our modern world."

—Paul Abramson, *Tokyo Today*

"... Real investigative journalism is not entirely dead in Japan. The authors had the courage to produce a hard-hitting work. It should be mandatory reading for their more timid colleagues—who will likely ignore it."

—*Japan International Journal*

"... Brings together the diverse experiences of exposed populations throughout the world, expressed in terms of the effects on people's daily lives [and] provides an unusually comprehensive ... picture of how nuclear accidents and routine nuclear industry activities have led to radiation exposure around the world."

Proth,2006-05-06 The demand for advanced management methods and tools for marine ecosystems is increasing worldwide Today many marine ecosystems are significantly affected by disastrous pollution from industrial agricultural municipal transportation and other anthropogenic sources The issues of environmental integrity are especially acute in the Mediterranean and Red Sea basins the cradle of modern civilization The drying of the Dead Sea is one of the most vivid examples of environmental disintegration with severe negative consequences on the ecology industry and wildlife in the area Strategic management and coordination of international remedial and restoration efforts is required to improve environmental conditions of marine ecosystems in the Middle East as well as in other areas The NATO Advanced Study Institute ASI held in Nice in October 2003 was designed to 1 provide a discussion forum for the latest developments in the field of environmentally conscious strategic management of marine environments and 2 integrate expertise of ecologists biologists economists and managers from European American Canadian Russian and Israeli organizations in developing a framework for strategic management of marine ecosystems The ASI addressed the following issues Key environmental management problems in exploited marine ecosystems Measuring and monitoring of municipal industrial and agricultural effluents Global contamination of seawaters and required remedial efforts Supply Chain Management approach for strategic coastal zones management and planning Development of environmentally friendly technologies for coastal zone development Modeling for sustainable aquaculture and Social political and economic challenges in marine ecosystem management *The Power of Promise* M V Ramana,2012-12-15 Nuclear power has been held out as possibly the most important source of energy for India And the dream of a nuclear powered India has been supported by huge financial budgets and high level political commitment for over six decades Nuclear power has also been presented as safe environmentally benign and cheap Physicist and writer M V Ramana offers a detailed narrative of the evolution of India s nuclear energy programme examining different aspects of it and the claims of success made on its behalf In *The Power of Promise* he makes a historically nuanced and compelling argument as to why the nuclear energy programme has failed in the past and why its future is dubious Ramana shows that nuclear power has been more expensive than conventional forms of electricity generation that the ever present risk of catastrophic accidents is heightened by observed organizational inadequacies at nuclear facilities and that existing nuclear fuel cycle facilities have been correlated with impacts on public health and the environment He offers detailed information and analysis that should serve to deepen the debate on whether India should indeed embark on a massive nuclear programme The Workbook ,1992 **Children and the Politics of Culture** Sharon Stephens,2021-02-09 The bodies and minds of children and the very space of children are under assault This is the message we receive from daily news headlines about violence sexual abuse exploitation and neglect of children and from a proliferation of books in recent years representing the domain of contemporary childhood as threatened invaded polluted and stolen by adults Through a series of essays that explore the global dimensions of children at risk an international group of researchers and policymakers discuss

the notion of children's rights and in particular the claim that every child has a right to a cultural identity. Explorations of children's situations in Japan, Korea, Singapore, South Africa, England, Norway, the United States, Brazil, and Germany reveal how children's everyday lives and futures are often the stakes in contemporary battles that adults wage over definitions of cultural identity and state cultural policies. Throughout this volume, the authors address the complex and often ambiguous implications of the concept of rights. For example, it may be used to defend indigenous children from radically assimilationist or even genocidal state policies, but it may also be used to legitimate racist institutions. A substantive introduction by the editor examines global political economic frameworks for the cultural debates affecting children and traces intriguing, sometimes surprising threads throughout the papers. In addition to the editor, the contributors are Norma Field, Marilyn Ivy, Mary John, Haejoang Cho, Saya Shiraishi, Vivienne Wee, Pamela Reynolds, Kathleen Hall, Ruth Mandel, Manuela Carneiro da Cunha, and Njabulo Ndebele.

Nagasaki Susan Southard, 2017-08-31. On August 9th, 1945, the US dropped an atomic bomb on Nagasaki. It killed a third of the population instantly, and the survivors, or hibakusha, would be affected by the life-altering medical conditions caused by the radiation for the rest of their lives. They were also marked with the stigma of their exposure to radiation and fears of the consequences for their children. Nagasaki follows the previously unknown stories of five survivors and their families from 1945 to the present day. It captures the full range of pain, fear, bravery, and compassion unleashed by the destruction of a city. Susan Southard has interviewed the hibakusha over many years, and her intimate portraits of their lives show the consequences of nuclear war. Nagasaki tells the neglected story of life after nuclear war and will help shape public debate over one of the most controversial wartime acts in history. Published for the 70th anniversary of the Hiroshima and Nagasaki bombs, this is the first study to be based on eye-witness accounts of Nagasaki in the style of John Hersey's Hiroshima. On August 9th, 1945, three days after the atomic bombing of Hiroshima, a 5-tonne plutonium bomb was dropped on the small coastal city of Nagasaki. The explosion destroyed factories, shops, and homes, and killed 74,000 people while injuring another 75,000. The two atomic bombs marked the end of a global war, but for the tens of thousands of survivors, it was the beginning of a new life marked with the stigma of being hibakusha, atomic bomb-affected people. Susan Southard has spent a decade interviewing and researching the lives of the hibakusha, raw, emotive eye-witness accounts which reconstruct the days, months, and years after the bombing, the isolation of their hospitalisation and recovery, the difficulty of re-entering daily life, and the enduring impact of life as the only people in history who have lived through a nuclear attack and its aftermath. Following five teenage survivors from 1945 to the present day, Southard unveils the lives they have led, their injuries, the annihilation of the bomb, the dozens of radiation-related cancers and illnesses they have suffered, the humiliating and frightening choices about marriage they were forced into as a result of their fears of the genetic diseases that may be passed through their families for generations to come. The power of Nagasaki lies in the detail of the survivors' stories, as deaths continued for decades because of the radiation contamination, which caused various forms of

cancer Intimate and compassionate while being grounded in historical research Nagasaki reveals the censorship that kept the suffering endured by the hibakusha hidden around the world For years after the bombings news reports and scientific research were censored by U S occupation forces and the U S government led an efficient campaign to justify the necessity and morality of dropping the bombs As we pass the seventieth anniversary of the only atomic bomb attacks in history Susan Southard captures the full range of pain fear bravery and compassion unleashed by the destruction of a city The personal stories of those who survived beneath the mushroom clouds will transform the abstract perception of nuclear war into a visceral human experience Nagasaki tells the neglected story of life after nuclear war and will help shape public discussion and debate over one of the most controversial wartime acts in history **Japan Quarterly** ,1993 Beyond the Mushroom Cloud Yuki Miyamoto,2012 This monograph explores the ethics and religious sensibilities of a group of the hibakusha survivors of 1945 s atomic bombings Unfortunately their ethic of not retaliation but reconciliation has not been much known perhaps obscured by the mushroom cloud However it is worth examining their philosophy as it could offer resources to reconcile the contested issues of public memories especially in the post 9 11 era *Australia, New Zealand, and the Pacific* Donald S. Garden,2005-08-19 A fascinating study of the environmental history of Australia New Zealand and the islands of the Pacific from the time of the dinosaurs to the present day Of interest to students and academics alike this book provides a much needed synthesis of the recent literature on the environmental history of Australia and Oceania Part of ABC CLIO s Nature and Human Societies series this book maps out the key trends in the region s environmental history charting the creation of the Australian continent from the ancient land mass of Gondwanaland to the arrival of humans Especially fascinating are the chapters highlighting how successive waves of human migration created environmental havoc throughout the region leading to the collapse of the Easter Island civilization and the spread of nonindigenous flora and fauna From the controversies over the reasons why creatures such as the marsupial lion and the giant kangaroo became extinct to such contemporary problems as deforestation and global warming this book contains sobering lessons for us all Cataloging Bulletin Hennepin County Library. Cataloging Section,1992 *Teaching Postwar Japanese Fiction* Alex Bates,2023-01-17 As Japan moved from the devastation of 1945 to the economic security that survived even the boom and bust of the 1980s and 1990s its literature came to embrace new subjects and styles and to reflect on the nation s changing relationship to other Asian countries and to the West This volume will help instructors introduce students to novels short stories and manga that confront postwar Japanese experiences including the suffering caused by the atomic bombings of Hiroshima and Nagasaki the echoes of Japan s colonialism and imperialism new ways of thinking about Japanese identity and about minorities such as the zainichi Koreans changes in family structures and environmental disasters Essays provide context for understanding the particularity of postwar Japanese literature its place in world literature and its connections to the Japanese past **Sandra Smith's Review for NCLEX-RN®** Marianne P. Nuclear Energy Edward A. Friedman,2025-07-12 Questions of energy policy are among the most central and consequential of any confronting society today While the role of nuclear energy is key there is little understanding and much misinformation regarding its nature and its potential Impeding the emergence of informed discourse on this topic is the lack of clear objective information Nuclear Energy Boom Bust and Emerging Renaissance helps answer the question of What role can nuclear energy play in meeting the global warming challenge Currently the general public has little access to developments that have been made in nuclear energy technology since the accidents of Chernobyl and Fukushima These new designs promise to come to fruition around 2030 as the 28th United Nations Conference on Climate Change COP28 witnessed a call for a tripling of the use of nuclear power by 2050 Edward A Friedman places the troubling issues of nuclear power into both historical and forward looking contexts first by exploring the consequences since the first reactor was connected to a public electrical grid and then by envisioning radically new designs that promise a safe path toward achieving net zero carbon emissions With non technical explanations this book provides insight of how nuclear reactor technology holds the promise of making significant contributions to the struggle against global warming and why dozens of nations are engaged in innovation and expansion of nuclear technology Timely and insightful Nuclear Energy will appeal to the lay reader while also serving as a college level text for both non science students studying energy policy or sustainability and students of science and technology
