University of Minnesota. General Extension Division, 1923 Models of Innovation Benoit Godin, 2017-02-24 Benoit Godin is a Professor at the Institut national de la recherche scientifique Montreal Models abound in science technology and society STS studies and in science technology and innovation STI studies They are continually being invented with one author developing many versions of the same model over time At the same time models are regularly criticized Such is the case with the most influential model in STS STI the linear model of innovation In this book Benoit Godin examines the emergence and diffusion of the three most important conceptual models of innovation from the early twentieth century to the late 1980s stage models linear models and holistic models Godin first traces the history of the models of innovation constructed during this period considering why these particular models came into being and what use was made of them He then rethinks and debunks the historical narratives of models developed by theorists of innovation Godin documents a greater diversity of thinkers and schools than in the conventional account tracing a genealogy of models beginning with anthropologists industrialists and practitioners in the first half of the twentieth century to their later formalization in STS STI Godin suggests that a model is a conceptualization which could be narrative or a set of conceptualizations or a paradigmatic perspective often in pictorial form and reduced discursively to a simplified representation of reality Why are so many things called models Godin claims that model has a rhetorical function First a model is a symbol of scientificity Second a model travels easily among scholars and policy makers Calling a conceptualization or narrative or perspective a model facilitates its propagation Accomplishments for Research, Extension, and Higher Education , 1992 *Resources for Teaching Elementary School Science* National Science Resources Center of the National Academy of Sciences and the Smithsonian Institution, 1996-04-11 What activities might a teacher use to help children explore the life cycle of butterflies What does a science teacher need to conduct a leaf safari for students Where can children safely enjoy hands on experience with life in an estuary Selecting resources to teach elementary school science can be confusing and difficult but few decisions have greater impact on the effectiveness of science teaching Educators will find a wealth of information and expert guidance to meet this need in *Resources for Teaching Elementary School Science* A completely revised edition of the best selling resource guide *Science for Children* *Resources for Teachers* this new book is an annotated guide to hands on inquiry centered curriculum materials and sources of help in teaching science from kindergarten through sixth grade Companion volumes for middle and high school are planned The guide annotates about 350 curriculum packages describing the activities involved and what students learn Each annotation lists recommended grade levels accompanying materials and kits or suggested equipment and ordering information These 400 entries were reviewed by both educators and scientists to ensure that they are accurate and current and offer students the opportunity to Ask questions and find their own answers Experiment productively Develop patience persistence and confidence in their own ability to solve real problems The entries in the curriculum section are grouped by scientific area Life Science Earth Science Physical Science and Multidisciplinary and Applied Science and by type

Why Dissection? Lynette A. Hart, Mary W. Wood, Benjamin L. Hart, 2008-02-28 Why do students continue to dissect animals in biology classes Why despite the excellence of teaching resources for veterinary and human medical education that substitute for dissection do those provided for pre college students fall short in convenience flexibility and coordination with the curriculum Why Dissection Animal Use in Education looks beyond the typical yes or no debate about dissection to understand how we came to our current practice of dissection in intermediate and high school biology even as preparation of health professionals has moved away from dissection Despite the many forces that support the continued use of dissection in pedagogy teachers retain much autonomy in how they teach in the classroom and legislation in many states provide specific requirements for what should and should not be taught in separated science and health curricula offering students the option to not engage in dissection Why Dissection walks students teachers and parents through these options to help them make more informed choices regarding their science education options
