The Birth of Stars and Planets John Bally, Bo Reipurth, 2006-08-24 Publisher description **The Nine-Banded Armadillo** W. J. Loughry, Colleen M. McDonough, 2024-02-19 The word armadillo is Spanish for little armored one This midsize mammal that looks like a walking tank is a source of fascination for many people but a mystery to almost all Dating back at least eleven million years the nocturnal burrowing insectivore was for centuries mistaken for a cross between a hedgehog and a turtle but it actually belongs to the mammalian superorder Xenarthra that includes sloths and anteaters Biologists W J Loughry and Colleen M McDonough have studied the nine banded armadillo *Dasypus novemcinctus* for more than twenty years Their richly illustrated book offers the first comprehensive review of everything scientists know about this unique animal Engaging both scientists and a broader public Loughry and McDonough describe the armadillo's anatomy and physiology and all aspects of its ecology behavior and evolution They also compare the nine banded armadillo with twenty or so other related species The authors pay special attention to three key features of armadillo biology reproduction disease and habitat expansion and why they matter Armadillos reproduce in a unique and puzzling manner females always give birth to litters of genetically identical quadruplets a strategy not found in any other vertebrates Nine banded armadillos are also the only vertebrates except for humans known to contract leprosy naturally And what about habitat expansion The authors suggest that the armadillo's remarkable spread across the southeastern United States may be the consequence of its most notable feature a tough protective carapace Biologists evolutionists students and all those interested in this curious creature will find *The Nine Banded Armadillo* rich in information and insight This comprehensive analysis will stand as the definitive scientific reference for years to come and a source of pleasure for the general public A COSMIC BIRTH... STARTING BEFORE ZERO PSJ (Peet) Schutte, 2013-07-12 I explain Genesis 1 v 1 the beginning or birth of the Universe in terms of the Bible using not theology but mathematics I prove Genesis 1 verse 1 to be correct by using mathematics The Bible says IN THE BEGINNING OF CREATION 1 when God made heaven and earth 2 the earth was without form and void 3 with darkness over the face of the abyss Yes this I do explain mathematically and I manage this because I prove and explain four cosmic keys that build the Universe namely The Titius Bode Law The Lagrangian Points The Roche limit and Coanda Effect Everything in nature in the Universe applies these phenomena in how space forms The Titius Bode Law The Lagrangian Points The Roche Coanda Effect forms the Universe in as much as forming stars in spheres and forming galactica in circles These principles form space and materials This is a process that produces space and that is how the Universe began before the Universe began in space I take the cosmic birth back to before space came about as the Big Bang **Origins of Life Volume II** Vladivoj Valkovic, 2024-09-27 In *Origins of Life Volume II* life and its origin are inspected from traditional and unexpected points of view The book takes an interdisciplinary approach discussing astrobiology chemical evolution and how the Universe accommodates life molecular biology and philosophy It is an open minded approach fully referenced throughout

and each chapter includes a further reading section for anyone wishing to learn more about that perspective on the origins of life First everything started with the Big Bang from nothing It appears now that everything was aiming toward our existence some 13 75 109 years later being capable of understanding it all We did it using powerful tools science philosophy and religion Although we appreciate the contributions made by philosophy and religion our contemplations and doubts are based on the plentiful scientific evidence provided The reader will be guided from make up of the life stage Universe tools and materials needed for the living matter to be formed in the small part of the Universe which one could call Human Neighborhood or the Local Universe It contains galaxies galaxy clusters and voids and the Milky Way and its satellites influencing each other during this time span The book is easy to read accompanied by numerous references it could be of use to the expert in the field as well as for curious minds with a scientific philosophical or religious background Planets and People ,1897 *From Dying Stars to the Birth of Life* Jerry Cranford,2011-03-01 Written in an informal manner this account tells the incredible story of the birth of an entirely new field of science called Astrobiology a field that is now investigating whether life might exist on other worlds From the discovery that other stars in our galaxy are circled by planets to the detection of single cell organisms found living on Earth in extremely hostile environments this account details the recent breakthroughs made by astronomers and earth scientists over the last few decades Based on these findings it argues that scientists now have the technology they need to move from speculating or fantasizing about extraterrestrials to possibly providing mankind with the first definitive proof that we are not alone *Extreme States of Matter* Vladimir E. Fortov,2015-12-26 With its many beautiful colour pictures this book gives fascinating insights into the unusual forms and behaviour of matter under extremely high pressures and temperatures These extreme states are generated among other things by strong shock detonation and electric explosion waves dense laser beams electron and ion beams hypersonic entry of spacecraft into dense atmospheres of planets and in many other situations characterized by extremely high pressures and temperatures Written by one of the world s foremost experts on the topic this book will inform and fascinate all scientists dealing with materials properties and physics and also serve as an excellent introduction to plasma shock wave and high energy density physics for students and newcomers seeking an overview This second edition is thoroughly revised and expanded in particular with new material on high energy density physics nuclear explosions and other nuclear transformation processes The Planets DK,2014-09-01 Discover places where a day is longer than a year where hailstones are made of diamonds and where a mountain looms twice the size of Everest These and more are all to be found in The Planets The Sun s gravity holds in thrall eight planets each with an entourage of moons as well as dwarf planets asteroids and comets The Planets takes you on a dazzling visual tour From the Solar System s fiery heart travel to rocky worlds such as tiny Mercury scorched by the Sun Then witness Venus swathed in a sulfurous haze and go to the outer reaches to visit planets such as gas giant Jupiter which is 120 times the size of Earth Using 3 D models and photography from NASA and the

Why Have Children? Christine Overall, 2012-02-03 A wide ranging exploration of whether or not choosing to procreate can be morally justified and if so how In contemporary Western society people are more often called upon to justify the choice not to have children than they are to supply reasons for having them In this book Christine Overall maintains that the burden of proof should be reversed that the choice to have children calls for more careful justification and

reasoning than the choice not to. Arguing that the choice to have children is not just a prudential or pragmatic decision but one with ethical repercussions, Overall offers a wide ranging exploration of how we might think systematically and deeply about this fundamental aspect of human life. Writing from a feminist perspective, she also acknowledges the inevitably gendered nature of the decision: the choice has different meanings, implications and risks for women than it has for men. After considering a series of ethical approaches to procreation and finding them inadequate or incomplete, Overall offers instead a novel argument. Exploring the nature of the biological parent-child relationship, which is not only genetic but also psychological, physical, intellectual and moral, she argues that the formation of that relationship is the best possible reason for choosing to have a child.

Greening Social Work Education Susan Hillock, 2024-03-01. Despite urgent calls for global action, sustainable social work practice and a solid green theoretical knowledge base, North American social work and helping professions have been slow to learn from community activists. Acknowledging the international climate emergency and acting collectively to achieve climate justice, *Greening Social Work Education* examines how social work educators can best incorporate sustainability content into social work curricula, integrate green teaching methods and mobilize students and colleagues towards climate action, justice and leadership. Drawing on Canadian content, this collection highlights Indigenous eco-feminist collective action and multi-interdisciplinary approaches to social work. The book provides a rationale for why the topic of greening is important for social work and the helping professions, discussion of current debates, tensions and issues, useful ideas related to innovative interdisciplinary theoretical approaches, analyses and constructs, and practical recommendations for teaching green social work education. In doing so, *Greening Social Work Education* strives to help social workers and educators gain the confidence and tools they need to transform their teaching and curricula.

Medicine of the Imagination: Dwelling in Possibility Imelda Almqvist, 2020-10-30. The human imagination gives rise to the most beautiful man-made structures and creations on Earth: architecture, literature, theatre, music, art, humanitarian initiatives, moon landings and space exploration, mythology, science. They all require a large dose of imagination. We all live surrounded by the results of the imagination of our peers and the creations of our ancestors. Without imagination, there is no compassion, no moral compass and no progress. But without imagination, there is also no fear of death. There are no premeditated murders or terrorist attacks; these rely on the human ability to imagine, to call up images and test-drive possible scenarios in the human mind. Once we get out the magnifying glass, we discover that the imagination is a double-edged sword. All of us together, humanity as a collective, are creating very confused and mixed outcomes: world peace remains elusive, wars rage and children starve. Addictions and pollution proliferate. *Medicine of the Imagination: Dwelling in Possibility* examines these issues and suggests that if we are to transcend religious wars, homophobia and medical cures worse than the diseases we face, then it is our moral duty to engage our

imagination in service to other people
