Eye And Brain:

Eye and Brain Richard L. Gregory, 2015-02-17 Since the publication of the first edition in 1966 *Eye and Brain* has established itself worldwide as an essential introduction to the basic phenomena of visual perception. Richard Gregory offers clear explanations of how we see brightness, movement, color, and objects, and he explores the phenomena of visual illusions to establish principles about how perception normally works and why it sometimes fails. Illusion continues to be a major theme in the book, which provides a comprehensive classification system. There are also sections on what babies see and how they learn to see, on motion perception, the relationship between vision and consciousness, and on the impact of new brain imaging techniques.

Eye and Brain Richard Langton Gregory, 1972-01-01 Vision and Brain James V. Stone, 2012-09-21 An engaging introduction to the science of vision that offers a coherent account of vision based on general information processing principles. In this accessible and engaging introduction to modern vision science, James Stone uses visual illusions to explore how the brain sees the world. Understanding vision, Stone argues, is not simply a question of knowing which neurons respond to particular visual features but also requires a computational theory of vision. Stone draws together results from David Marr's computational framework, Barlow's efficient coding hypothesis, Bayesian inference, Shannon's information theory, and signal processing to construct a coherent account of vision that explains not only how the brain is fooled by particular visual illusions but also why any biological or computer vision system should also be fooled by these illusions. This short text includes chapters on the eye and its evolution, how and why visual neurons from different species encode the retinal image in the same way, how information theory explains color aftereffects, how different visual cues provide depth information, how the imperfect visual information received by the eye and brain can be rescued by Bayesian inference, how different brain regions process visual information, and the bizarre perceptual consequences that result from damage to these brain regions. The tutorial style emphasizes key conceptual insights rather than mathematical details, making the book accessible to the nonscientist and suitable for undergraduate or postgraduate study.

Eye, Brain, and Vision D. H. Hubel, 1995 Eye and brain Richard L. Gregory, 1976 Eye and Brain R. L. Gregory, 1970 Eye and Brain Richard L. Gregory, 1965 **Eye and Brain** Richard Langton Gregory, 1977 **Eye and Brain** R. L. Gregory, 1986 **Barriers and Fluids of the Eye and Brain** Malcolm Beverley Segal, 1992 This volume presents the latest findings regarding the control of the fluid environments of the eye and brain. The book is comprised of papers presented at a symposium honoring the 80th birthday of Professor Hugh Davson. The contributors are previous students of Hugh Davson who are now leading authorities in the fields of the eye and brain. The eye is considered from its many interfaces, including the role of prostaglandins, blood flow in diabetes, and the vitreous body. Other topics discussed include the role of carbonic anhydrase, cerebrospinal fluid, and its drainage, and the development of the blood-brain barrier to macromolecules. The book also shows how recent findings about homologous molecules refute earlier studies with foreign tracers and offers a fascinating glimpse into the future with a

Using Eye Movements as an Experimental Probe of Brain Function R. John Leigh, Christopher Kennard, 2008-09-02 This volume of Progress in Brain Research is based on the proceedings of a conference Using Eye Movements as an Experimental Probe of Brain Function held at the Charing Cross Hospital Campus of Imperial College London UK on 5th 6th December 2007 to honor Professor Jean B. Tegner. With 87 contributions from international experts both basic scientists and clinicians the volume provides many examples of how eye movements can be used to address a broad range of research questions Section 1 focuses on extraocular muscle highlighting new concepts of proprioceptive control that involve even the cerebral cortex Section 2 comprises structural physiological pharmacological and computational aspects of brainstem mechanisms and illustrates implications for disorders as diverse as opsoclonus and congenital scoliosis with gaze palsy Section 3 addresses how the cerebellum transforms neural signals into motor commands and how disease of such mechanisms may lead to ataxia and disorders such as oculopalatal tremor Section 4 deals with sensory motor processing of visual vestibular somatosensory and auditory inputs such as are required for navigation and gait Section 5 illustrates how eye movements used in conjunction with single unit electrophysiology functional imaging transcranial magnetic stimulation and lesion studies have illuminated cognitive processes including memory prediction and even free will Section 6 includes 18 papers dealing with disorders ranging from congenital to acquired forms of nystagmus genetic and degenerative neurological disorders and treatments for nystagmus and motion sickness Clinicians will find important new information on the substrate for spinocerebellar ataxia late onset Tay Sachs disease Huntington disease and pulvinar lesions Organizes multiple articles on such topics as proprioception short and longer term memory and hereditary cerebellar ataxias for a more coherent presentation Articles on anatomic tracers functional imaging and computational neuroscience are illustrated in color
