Eye Movements:

The Oxford Handbook of Eye Movements Simon Liversedge, Iain Gilchrist, Stefan Everling, 2011-08-18 In the past few years there has been an explosion of eye movement research in cognitive science and neuroscience. This has been due to the availability of off the shelf eye trackers along with software to allow the easy acquisition and analysis of eye movement data. Accompanying this has been a realisation that eye movement data can be informative about many different aspects of perceptual and cognitive processing. Eye movements have been used to examine the visual and cognitive processes underpinning a much broader range of human activities including language production, dialogue, human computer interaction, driving behaviour, sporting performance and emotional states. Finally in the past thirty years there have been real advances in our understanding of the neural processes that underpin eye movement behaviour. The Oxford Handbook of Eye Movements provides the first comprehensive review of the entire field of eye movement research. In over fifty chapters it reviews the developments that have so far taken place, the areas actively being researched and looks at how the field is likely to develop in the coming years. The first section considers historical and background material before moving onto section 2 on the neural basis of eye movements. The third and fourth sections look at visual cognition and eye movements and eye movement pathology and development. The final sections consider eye movements and reading and language processing and eye movements. Bringing together cutting edge research from an international team of leading psychologists, neuroscientists and vision researchers, this book is the definitive reference work in this field.

The Neurology of Eye Movements R. John Leigh, David S. Zee, 2015 It is a tremendous achievement to have provided this highly comprehensive but readable text which informs such a large group of researchers and clinicians. Christopher Kennard PhD FRCP FMedSci Professor of Clinical Neurology, Head Nuffield Department of Clinical Neurosciences, University of Oxford, John Radcliffe Hospital, Oxford, United Kingdom. A monograph written with deep knowledge, understanding, wisdom, clarity, intelligibility, the superlatives could go on and on. A remarkable achievement and a great gift to all of us from the two modern giants of eye movement disorders.

Michael Halmagyi MD Eye and Ear Research Unit, Neurology Department, Royal Prince Alfred Hospital, The University of Sydney, Australia. The fifth edition of *The Neurology of Eye Movements* is a must for all neurologists and neuroscientists interested in how the human vestibular and oculomotor systems adapt to movement in space and to optimally viewing the world and its contents.

Zee Professor, Ophthalmology, Otolaryngology Head and Neck Surgery and Neuroscience, 1999-08-26. *The Neurology of Eye Movements* provides clinicians with a synthesis of current scientific information that can be applied to the diagnosis and treatment of

disorders of ocular motility Basic scientists will also benefit from descriptions of how data from anatomical electrophysiological pharmacological and imaging studies can be directly applied to the study of disease By critically reviewing such basic studies the authors build a conceptual framework that can be applied to the interpretation of abnormal ocular motor behavior at the bedside These syntheses are summarized in displays new figures schematics and tables Early chapters discuss the visual need and neural basis for each functional class of eye movements Two large chapters deal with the evaluation of double vision and systematically evaluate how many disorders of the central nervous system affect eye movements This edition has been extensively rewritten and contains many new figures and an up to date section on the treatment of abnormal eye movements such as nystagmus A major innovation has been the development of an option to read the book from a compact disc make use of hypertext links which bridge basic science to clinical issues and view the major disorders of eye movements in over 60 video clips This volume will provide pertinent up to date information to neurologists neuroscientists ophthalmologists visual scientists otalaryngologists optometrists biomedical engineers and psychologists

Eye Movements Roger PG van Gompel, 2007-03-27 Eye movement recording has become the method of choice in a wide variety of disciplines investigating how the mind and brain work This volume brings together recent high quality eye movement research from many different disciplines and in doing so presents a comprehensive overview of the state of the art in eye movement research Sections include the history of eye movement research physiological and clinical studies of eye movements transsaccadic integration computational modelling of eye movements reading spoken language processing attention and scene perception and eye movements in natural environments Includes recent research from a variety of disciplines Divided into sections based on topic areas with an overview chapter beginning each section Through the study of eye movements we can learn about the human mind and eye movement recording has become the method of choice in many disciplines *Eye Movements and Human Information Processing* International Union of Psychological Science, 1985

Movements Dennis F. Fisher, Richard A. Monty, John W. Senders, 2017-03-27 Originally published in 1981 this volume represents the edited proceedings of the third symposium on eye movements and behaviour sponsored by the US Army Human Engineering Laboratory The conference titled The Last Whole Earth Eye Movement Conference was held in Florida in February 1980 As the conference approached seizure of the American hostages by the Iranian militants the Russian invasion of Afghanistan and the uncertain economic outlook around the world made it appear as though the title was a self fulfilling prophecy But the meeting proved highly successful and people throughout the world seemed to be adapting to the stresses of international tension making the possibility of subsequent meetings more likely The present volume is intended to serve as a complementary text to the earlier texts *Eye Movements and Psychological Processes* Monty Senders 1976 and *Eye Movements and the Higher Psychological Functions* Senders Fisher Monty 1978 rather than a revision and update of them

Eye Movements and Their Role in Visual and Cognitive Processes Eileen Kowler, 1990 This is the first book to deal exclusively with oculomotor performance in a series that up to this point has been devoted largely to reviews of research on oculomotor anatomy and physiology The publication of this volume signifies the recognition of the fact that a genuine understanding of eye movement will not come about through the study of neurons alone We need to know about the capacity to make different kinds of eye movement and about how such oculomotor capacity is used to accomplish different sorts of visual and cognitive tasks i e how the eye can move and why it moves in particular ways Research on respective topics was critically evaluated by the contributing authors resulting in a controversial and up to date appraisal of this subject **Eye**

Ghahari, John D. Enderle, 2022-06-01 There are five different types of eye movements saccades smooth pursuit vestibular ocular eye movements optokinetic eye movements and vergence eye movements The purpose of this book series is focused primarily on mathematical models of the horizontal saccadic eye movement system and the smooth pursuit system rather than on how visual information is processed A saccade is a fast eye movement used to acquire a target by placing the image of the target on the fovea Smooth pursuit is a slow eye movement used to track a target as it moves by keeping the target on the fovea The vestibular ocular movement is used to keep the eyes on a target during brief head movements The optokinetic eye movement is a combination of saccadic and slow eye movements that keeps a full field image stable on the retina during sustained head rotation Each of these movements is a conjugate eye movement that is movements of both eyes together driven by a common neural source A vergence movement is a non conjugate eye movement allowing the eyes to track targets

as they come closer or farther away In Part 1 early models of saccades and smooth pursuit are presented A number of oculomotor plant models are described therein beginning with the Westheimer model published in 1954 and up through our 1995 model involving a 4th order oculomotor plant model In Part 2 a 2009 version of a state of the art model is presented for horizontal saccades that is 3rd order and linear and controlled by a physiologically based time optimal neural network In this book a multiscale model of the saccade system is presented focusing on the neural network Chapter 1 summarizes a whole muscle model of the oculomotor plant based on the 2009 3rd order and linear and controlled by a physiologically based time optimal neural network Chapter 2 presents a neural network model of biophysical neurons in the midbrain for controlling oculomotor muscles during horizontal human saccades To investigate horizontal saccade dynamics a neural circuitry including omnipause neuron premotor excitatory and inhibitory burst neurons long lead burst neuron tonic neuron interneuron abducens nucleus and oculomotor nucleus is developed A generic neuron model serves as the basis to match the characteristics of each type of neuron in the neural network We wish to express our thanks to William Pruehsner for drawing many of the illustrations in this book Table of Contents Acknowledgments 2009 Linear Homeomorphic Saccadic Eye Movement Model A Neuron Based Time Optimal Controller of Horizontal Saccadic Eye Movements and Glissades References Authors Biographies

The Control of Eye Movements Paul Bach-y-Rita, 2012-12-02 The Control of Eye Movements presents the proceedings of the Symposium on the Control of Eye Movements organized by the Smith Kettlewell Institute of Visual Sciences of the Pacific Medical Center and the Department of Visual Sciences of the University of the Pacific Graduate School of Medical Sciences San Francisco California November 10 11 1969 The book is organized into two parts Part I is devoted to presentations of anatomical physiological pharmacological psychological and clinical aspects of eye movements The material presented should provide a valuable reference source as well as increase awareness of the need for further investigation of many aspects of the basic physiology of eye movements Part II presents a series of papers dealing with models of various parts of the oculomotor system The modeling approach to control of eye movements is still in its infancy and the present work presents the first comprehensive survey of biophysical mathematical and engineering aspects of eye movement control

Models of Horizontal Eye Movements, Part I John Enderle, 2022-06-01 There are five different types of eye movements saccades smooth pursuit vestibular ocular eye movements optokinetic eye movements and vergence eye movements The purpose of this book is focused primarily on mathematical models of the horizontal saccadic eye movement system and the smooth pursuit system rather than on how visual information is processed A saccade is a fast eye movement used to acquire a target

by placing the image of the target on the fovea Smooth pursuit is a slow eye movement used to track a target as it moves by keeping the target on the fovea The vestibular ocular movement is used to keep the eyes on a target during brief head movements The optokinetic eye movement is a combination of saccadic and slow eye movements that keeps a full field image stable on the retina during sustained head rotation Each of these movements is a conjugate eye movement that is movements of both eyes together driven by a common neural source A vergence movement is a non conjugate eye movement allowing the eyes to track targets as they come closer or farther away In this book early models of saccades and smooth pursuit are presented The smooth pursuit system allows tracking of a slow moving target to maintain its position on the fovea Models of the smooth pursuit have been developed using systems control theory all involving a negative feedback control system that includes a time delay controller and plant in the forward loop with unity feedback The oculomotor plant and saccade generator are the basic elements of the saccadic system The oculomotor plant consists of three muscle pairs and the eyeball A number of oculomotor plant models are described here beginning with the Westheimer model published in 1954 and up through our 1995 model involving a 4th order oculomotor plant model The work presented here is not an exhaustive coverage of the field but focused on the interests of the author In Part II a state of art model of the saccade system is presented including a neural network that controls the system Table of Contents Introduction Smooth Pursuit Models Early Models of the Horizontal Saccadic Eye Movement System Velocity and Acceleration Estimation 1995 Linear Homeomorphic Saccadic Eye Movement Model **Eye Movements and Visual Cognition** Raymond M.
