

Faraday as a Natural Philosopher

Joseph Agassi

• If any of the properties of matter be referred to the atomic sphere of power around the atoms, that is making space matter, for this is not a reference in degree that have dissimilarity, but a difference in kind: for every thing ~~is~~ ^{is} that the atom is a more mathematical center of power is adjusted around it - ~~that~~ ^{that} all the bulkiness be measured as matter and matter will be continuous for the space due to a unit of that midway between two vertices will have the same proportion though not to the same hypos. - This allows many things that the old theory said - as that matter may be mutually penetrable, as that two substances of three or four may exist in the same amount of space - fully shown in pictures of plates.

Faraday As A Natural Philosopher:

Faraday as a Natural Philosopher Joseph Agassi, 1971-01-01 **The Philosopher's Tree** Peter Day, 2020-11-27 This book provides a comprehensive selection of Michael Faraday's writings taken from all aspects of his life intimate and public. It is designed to show the relationships between his many activities especially with the Royal Institution for whose bicentenary this collection is published. **A Philosopher's Apprentice** Joseph Agassi, 2008 Both a Popper biography and an autobiography Agassi's *A Philosopher's Apprentice* tells the riveting story of his intellectual formation in 1950s London a young brilliant philosopher struggling with an intellectual giant father mentor and rival all at the same time. His subsequent rebellion and declaration of independence leads to a painful break never to be completely healed. No other writer has Agassi's psychological insight into Popper and no other book captures like this one the intellectual excitement around the Popper circle in the 1950s and the struggles of the 1960s and 1970s personal academic political all important philosophically. Agassi's Popper whether one agrees with it or not is an enormous contribution to scholarship. This second revised edition includes also Popper's and Agassi's last correspondence and in a postscript it shows Agassi leafing through Popper's archives reaching a sort of reconciliation an appropriate ending to the drama. A must read. Malachi Hachon, Duke University.

Michael Faraday's Mental Exercises Alice Jenkins, 2008-06-01 In 1818 Michael Faraday and a handful of other London artisans formed a self help group with the aim of teaching themselves to write like gentlemen. For a year and a half Faraday's essay circle met regularly to read aloud and criticise one another's writings. The *Mental Exercises* they produced are a record of the life literary tastes and social and political ideas of Dissenting artisans in Regency London. This book is the first to publish the essays and poems produced by Faraday's circle. The complete corpus of the essay circle's writings is accompanied by detailed annotations extracts from key sources and a full length introduction explaining the biographical historical and literary context of the group. This edition will be valuable not only for historians of Romantic and Victorian science but for literary scholars and historians working on early nineteenth century writing reading and class issues and for all readers interested in the development of the mind of a great scientist. **Nineteenth-Century Attitudes: Men of Science** S.

Ross, 2012-12-06 **Ideas for a Hermeneutic Phenomenology of the Natural Sciences** J.J. Kockelmans, 2012-12-06 *Ideas for Hermeneutic Phenomenology of Natural Sciences* published in 1993 as volume 15 of this series comprised mainly ontological reflections on the natural sciences. That book explained why the natural sciences must be considered inherently interpretive in character and clarified the conditions under which scientific interpretations are legitimate and may be called true. This companion volume focuses on methodological issues. Its first part elucidates the methodical hermeneutics developed in the 19th century by Boeckh, Birt, Dilthey and others. Its second part through the use of concrete examples drawn from modern physics as it unfolded from Copernicus to Maxwell clarifies and proves the main points of the ontologico-hermeneutical conception of the sciences elaborated in the earlier volume. It thereby both illuminates the most important

problems confronting an ontologico phenomenological approach to the natural sciences and offers an alternative to Kuhn's conception of the historical development of the natural sciences

The Natural Law of Cycles James H. Bunn, 2017-07-28

The Natural Law of Cycles assembles scientific work from different disciplines to show how research on angular momentum and rotational symmetry can be used to develop a law of energy cycles as a local and global influence Angular momentum regulates small scale rotational cycles such as the swimming of fish in water the running of animals on land and the flight of birds in air Also it regulates large scale rotation cycles such as global currents of wind and water James H Bunn introduces concepts of symmetry balance and angular momentum showing how together they shape the mobile symmetries of animals Chapter 1 studies the configurations of animals as they move in a head first direction Chapter 2 shows how sea animals follow currents and tides generated by the rotational cycles of the earth In chapter 3 Bunn explores the biomechanical pace of walking as a partial cycle of rotating limbs On a large scale angular momentum governs balanced shifts in plate tectonics Chapter 4 begins with an examination of rotational wind patterns in terms of the counter balancing forces of angular momentum The author shows how these winds augment the flights of birds during migrations A final chapter centres on the conservation of energy as the most basic principle of science Bunn argues that in the nineteenth century the unity of nature was seen in the emergent concept of energy not matter as the source of power including the movements of animals and machines In each chapter Bunn features environmental writers who celebrate mobile symmetries This book will interest students naturalists and advocates of the environmental movement

American Poetic Materialism from Whitman to Stevens Mark Noble, 2015 In American Poetic Materialism from Whitman to Stevens Mark Noble examines writers who rethink the human in material terms Do our experiences correlate to our material elements Do visions of a common physical ground imply a common purpose Noble proposes new readings of Walt Whitman Ralph Waldo Emerson William James George Santayana and Wallace Stevens that explore a literary history wrestling with the consequences of its own materialism At a moment when several new models of the relationship between human experience and its physical ground circulate among critical theorists and philosophers of science this book turns to poets who have long asked what our shared materiality can tell us about our prospects for new models of our material selves

The Holistic Inspirations of Physics Val Dusek, 1999 While many books have claimed parallels between modern physics and Eastern philosophy none have dealt with the historical influences of both Chinese traditional thought and non mechanistic holistic western thought on the philosophies of the scientists who developed electromagnetic field theory In *The Holistic Inspirations of Physics* R Valentine Dusek asks to what extent is classical field theory a product of organic and holistic philosophies and frameworks Electromagnetic theory has been greatly influenced by holistic worldviews Dusek posits and he highlights three alternative scientific systems that made the development of electromagnetic theory possible medieval Chinese science

Western Renaissance occultism and the German romantic traditions He situates these alternative approaches in their social context and background and traces their connection with components of accepted physical science in relation to a number of social movements and philosophical theories Readers will learn of specific contributions made by these alternative traditions such as the Chinese inventing the compass and discovering the earth's magnetic field and magnetic declination Western alchemical ideas of active forces and occult influences contributed to Newton's theory of gravitation force as action at a distance rather as a result of purely mechanical collisions and contact action Dusek also describes the extent to which women's culture supplied often without credit the philosophical background ideas that were absorbed into mainstream field theory
