Annual Report of the

European Organization for Nuclear Research European Organization for Nuclear Research, 1998 *100 Years Of Subatomic Physics* Ernest M Henley, Stephen D Ellis, 2013-06-28 By year 1911 radioactivity had been discovered for over a decade but its origin remained a mystery Rutherford's discovery of the nucleus and the subsequent discovery of the neutron by Chadwick started the field of subatomic physics a quest for understanding the fundamental constituents of matter This book reviews the important achievements in subatomic physics in the past century The chapters are divided into two parts nuclear physics and particle physics Written by renowned authors who have made major developments in the field this book provides the academics and researchers an essential overview of the present state of knowledge in nuclear and particle physics

2000 IEEE Nuclear Science Symposium, 2001 Topics covered in this work include semiconductor detectors other solid state detectors gaseous detectors scintillates photodetectors novel detector technologies neutron detection read out electronics and signal processing control systems and vertex detectors *Advanced Technology And Particle Physics - Proceedings Of The 7th International Conference On Icatpp-7* Michele Barone, Emilio Borchini, Joey Huston, Claude Leroy, Pier-giorgio Rancoita, P L Riboni, Randal C Ruchti, 2002-11-28 This book features up to date technology applications to radiation detection It synthesises several techniques of and approaches to radiation detection covering a wide range of applications and addressing a large audience of experts and students Many of the talks are in fact reviews of particular topics often not covered in standard books and other conferences for instance the medical physics section To present these medical physics talks is crucial since a large fraction of the community in medical physics are from the particle physics community The same feature is true for astroparticle and space physics which are relatively new fields This book is unique in its scope Except for IEEE there is no other conference in the world that presents such a wide coverage of advanced technology applied to particle physics However unlike IEEE more room is made in the book for reviews and general talks

Advanced Computing and Analysis Techniques in Physics Research Pushpalatha C. Bhat, Matthias Kasemann, 2001-09-21 Over the next decade or two an impressive array of scientific instruments at the Tevatron RHIC Relativistic Heavy Ion Collider and LHC Large Hadron collider LIGO Laser Interferometer Gravitational Observatory and SDSS Sloan Digital Sky Survey to name a few will usher in the most comprehensive program of study of the fundamental forces of nature and the structure of the universe Major discoveries are anticipated But it is our conviction that the pace of discoveries will be severely impeded unless a concerted effort is made to deploy and employ advanced computing techniques to handle process and analyze the unprecedented amounts of data The workshop followed four main tracks Artificial Intelligence neural networks and other adaptive multivariate methods Innovative Software Algorithms and Tools Symbolic Problem Solving and Very Large Scale Computing The workshop covered applications in high energy physics astrophysics accelerator physics and nuclear physics Topics included are uses of C in scientific computing large scale simulations advanced analysis environments worldwide computing artificial intelligence online application of neural networks applications in data analysis theoretical aspects

 Kandel, 2013-11-11 Intelligent systems are now being used more commonly than in the past These involve cognitive evolving
 and artificial life robotic and decision making systems to name a few Due to the tremendous speed of development on both
 fundamental and technological levels it is virtually impossible to offer an up to date yet comprehensive overview of this field
 Nevertheless the need for a volume presenting recent developments and trends in this domain is huge and the demand for
 such a volume is continually increasing in industrial and academic engineering 1 communities Although there are a few
 volumes devoted to similar issues none offer a comprehensive coverage of the field moreover they risk rapidly becoming
 obsolete The editors of this volume cannot pretend to fill such a large gap However it is the editors intention to fill a
 significant part of this gap A comprehensive coverage of the field should include topics such as neural networks fuzzy
 systems neuro fuzzy systems genetic algorithms evolvable hardware cellular automata based systems and various types of
 artificial life system implementations including autonomous robots In this volume we have focused on the first five topics
 listed above The volume is composed of four parts each part being divided into chapters with the exception of part 4 In Part 1
 the topics of Evolvable Hardware and GAs are addressed In Chapter 1 Automated Design Synthesis and Partitioning for

 physics commissioned by the Executive Committee of the Division of Particles and Fields of the American Physical Society
 This year long study was initiated in the early 1994 in the wake of the cancellation of the SSC and is meant to complement
 the report of the Drell HEPAP subpanel charged with providing a vision for the future of the field The DPF study of high
 energy physics was organized on the basis of the working groups each led by a number of co conveners chosen among
 established leaders in the various subspecialties in the field These conveners in turn organized their working groups by
 inviting other active workers in the discipline to participate and gathered further input from the community by holding a
 variety of specialized meetings and workshops This book contains the final reports of the 11 working groups assembled for
 the study along with an extended overview and executive summary by the editors **Artificial Neural Networks - ICANN**
