Farming, Development and Space Bernd Andreae, 2013-02-06 No detailed description available for Farming Development and Space

An Introduction to Agricultural Geography David Grigg, 2003-09-02 Employing nearly half of the world's workforce agriculture is clearly of great economic and social importance. An incredible variety of methods are used globally. The Western world has the latest scientific and industrial advancements at its disposal, yet in the Third World a living is made using tools that have hardly changed in two thousand years. An Introduction to Agricultural Geography provides an extensive guide through this diverse and increasingly important geographical subject, aiming to show that a wide range of factors explain how agricultural practices differ from place to place. Dealing with the physical environment, economic behaviour and demands, institutional and social influences, and the impact of farming upon the environment, the author has produced an important introductory text that is topical, incisive, and ultimately essential to reach an understanding of the remarkable diversity of the world's major industry.

Adoption of Agricultural Development Measures in Chhindwara Dharam Das Vishwakarma, 2003. It embodies ecological determinants about agricultural relevance, demographic variables relevant to diffusion and adoption of agricultural innovation, land use pattern determinants of agricultural innovations, status of irrigation, the base of yield-raising technology, use of high yielding variety of seeds, adoption of soil fertility measures, financing system, mechanical technology and agricultural productivity, and finally the levels of adoption. Analyses the spatio-temporal inter-societal and intra-societal variation in the adoption of agricultural development measures. Has been the thrust objective of this book. Salient Features: Analyses the ecological parameters, cultural background and operational infrastructure of the plateau as the major determinants of agricultural land use and adoption of agricultural development measures. Evaluates the spatial and temporal variation in the use of agricultural development measures. Establishes relationship between each of personal, social and economic characteristics of adopters and the extent of adoption of each of selected agricultural innovation. Determines spatial inter-societal and intra-societal variation in level of adoption in perspectives of above determinants. Evaluates the impact of the components of innovations on agricultural productivity. Useful for agricultural geographers, rural development planners and executors, irrigation engineers as well as scholars of rural habitat transformation. Also, this is well befitting the syllabi of universities for post graduate classes and highly responsive to researchers.

Water Resources and Agricultural Development in the Tropics Christopher J. Barrow, 2016-07-01. First published in 1988. There are many excellent texts on water supply and irrigation engineering, irrigation economics, agricultural development and the problems which often plague such efforts. Few syntheses of such writings have been made despite a clear need for them from people interested in water resources and agricultural development, students of geography, economics, development studies and agricultural management, administrators, planners and aid agency staff. This book attempts to provide a broad interdisciplinary introduction for such people.

Agriculture In Third Wrl W. B. Morgan, 2019-03-13 we do not yet seem to have realised that the exchange of products between countries in one part of the world but at different stages of development is no less natural and no less profitable for the various nations than the exchange of products which differ because they grow in different climates Thiinen Hall xg66 p

194 There have been few attempts to study agriculture within a spatial framework notwithstanding the quintessential importance of land as a production factor Land is most often treated as generalized environment although it could also be considered as social and economic space social because even the most crowded of farming communities has much greater distance between its basic social units than exist within an urban industrial agglomeration and economic because distances to markets to factor sources and to information must be overcome and frequently vary by type of market factor and information source Modern agricultural geography has been largely preoccupied with the development of techniques and with classification often as ends in themselves or with a geographical element consisting mainly of some general locational reference or regional description Rarely has there been an attempt to identify a spatial structure associated with some particular agricultural enterprise or practice

Climate Change and Ancient Societies in Europe and the Near East Paul Erdkamp, Joseph G. Manning, Koenraad Verboven, 2021-11-05 Climate change over the past thousands of years is undeniable but debate has arisen about its impact on past human societies This book explores the link between climate and society in ancient worlds focusing on the ancient economies of western Eurasia and northern Africa from the fourth millennium BCE up to the end of the first millennium CE This book contributes to the multi disciplinary debate between scholars working on climate and society from various backgrounds The chronological boundaries of the book are set by the emergence of complex societies in the Neolithic on the one end and the rise of early modern states in global political and economic exchange on the other In order to stimulate comparison across the boundaries of modern periodization this book ends with demography and climate change in early modern and modern Italy a society whose empirical data allows the kind of statistical analysis that is impossible for ancient societies The book highlights the role of human agency and the complex interactions between the natural environment and the socio cultural political demographic and economic infrastructure of any given society It is intended for a wide audience of scholars and students in ancient economic history specifically Rome and Late Antiquity
