and global optima in a fully distributed manner The book provides an explicit description of how players attempt to learn over time about the game and about the behavior of others It focuses on finite and infinite systems where the interplay among the individual adjustments undertaken by the different players generates different learning dynamics heterogeneous learning risk sensitive learning and hybrid dynamics   **Transactions on Computational Collective Intelligence VIII** Ngoc-Thanh Nguyen,2012-10-12 These Transactions publish research in computer based methods of computational collective intelligence CCI and their applications in a wide range of fields such as the Semantic Web social networks and multiagent systems TCCI strives to cover new methodological theoretical and practical aspects of CCI understood as the form of intelligence that emerges from the collaboration and competition of many individuals artificial and or natural The application of multiple computational intelligence technologies such as fuzzy systems evolutionary computation neural systems consensus theory etc aims to support human and other collective intelligence and to create new forms of CCI in natural and or artificial systems This eighth issue contains a collection of ten carefully selected and thoroughly revised contributions
