## **Genetic Prehistory In Selective Breeding A Prelude To Mendel:**

*Genetic Prehistory in Selective Breeding* Roger J. Wood, Vítězslav Orel, 2001 Before Mendel who came closest to the truth about heredity This book examines the activities of sheep breeders able to transform the appearance and qualities of their stock by combining different traits of body or wool into new patterns Exploiting what were then untried procedures individual trait selection very close inbreeding and progeny testing they demonstrated inheritance from both sexes and showed how it could be stabilised Major advances in breeding are associated with the English farmer Robert Bakewell 1725 1795 By the following century when the same procedures had been established at breeding centres in central Europe theory as well as practice became the subject of wider attention In the Brno Sheep Breeders Society discussions of patterns of heredity finally gave way to the physiological question What is inherited and how The question was posed by Cyrill Napp abbot of the monastery to which Mendel was admitted six years later *Heredity Before Mendel* Péter Poczai, 2022-06-15 The history of Science is replete with untold stories and this book is one of these accounts The author shares a narrative of heredity an active topic of inquiry long before Gregor Mendel the father of genetics planted his peas One such interlude unfolded in Mendel's home city and involved the sheep breeder Imre Festetics He sought to improve wool and proposed important rules of heredity Unfortunately aspects of wool quality now known to be polygenic complicate interpretations of the work of Festetics and explain why it is neglected The forebearers of Mendel never get the credit they deserve *Heredity Before Mendel* resurrects Festetics the grandfather of heredity Key Features 1 Documents a vibrant community of scholars interested in heredity before Mendel 2 Highlights the work of Imre Festetics the forgotten grandfather of genetics 3 Describes political repression which stifled the nascent foundation of heredity research 4 Emphasizes the role sheep and wool played as the first model system of genetics 5 Challenges 19th century taboos in Moravia leading to malicious rumors about the inbred royal House of Austria Habsburgs [The Oxford Handbook of the History of Eugenics](#) Alison Bashford, Philippa Levine, 2010-09-24 Eugenic thought and practice swept the world from the late nineteenth to the mid twentieth century in a remarkable transnational phenomenon that informed social and scientific policy across the political spectrum from liberal welfare measures in emerging social democratic states to feminist ambitions for birth control to public health campaigns to totalitarian dreams of the perfectibility of man This book dispels for uninitiated readers the automatic and apparently exclusive link between eugenics and the Holocaust the popularity of eugenics in Japan for example comes as a surprise It is the first world history of eugenics and an indispensable core text for both teaching and research in what has become a sprawling but ever more important field *Enlightenment Biopolitics* William Max Nelson, 2024-05-06 A wide ranging history tracing the birth of biopolitics in Enlightenment thought and its aftermath In *Enlightenment Biopolitics* historian William Max Nelson pursues the ambitious task of tracing the context in which biopolitical thought emerged and circulated He locates that context in the Enlightenment when emancipatory ideals sat alongside the horrors of colonialism slavery and

race based discrimination In fact these did not just coexist Nelson argues they were actually mutually constitutive of Enlightenment ideals In this book Nelson focuses on Enlightenment era visions of eugenics including proposals to establish programs of selective breeding forms of penal slavery and spurious biological arguments about the supposed inferiority of particular groups The Enlightenment he shows was rife with efforts to shape harness and organize the minds and especially the bodies of subjects and citizens In his reading of the birth of biopolitics and its transformations Nelson examines the shocking conceptual and practical connections between inclusion and exclusion equality and inequality rights and race and the supposed improvement of the human species and practices of dehumanization **The Driving Forces of Evolution**

David Wool,2006-01-10 To cope with the abiotic stress induced osmotic problems plants adapt by either increasing uptake of inorganic ions from the external solution or by de novo synthesis of organic compatible solutes acting as osmolytes Of the osmoregulants and protectants discussed in this volume trehalose fructans ectoine and citrulline which are generated in

*Cat People: Human-Cat Interrelatedness in the Cat Fancy* Emily Stone,2022-07-31 This book examines the social world of the cat fancy or the leisure activity of breeding and exhibiting pedigree cats Based on multispecies ethnographic fieldwork and interviews in the United Kingdom it explores the process and performance of exhibiting cats at shows the breeding practices and discourses integral to the creation of pedigree breeds and the relations that these practices generate between human guardians the pedigree cat population and non pedigree cats Through observation with cat fanciers and their interactions with their cats the author investigates the social dynamics and relationships that form within the fancy considering the interconnections between biopower and eugenics in pedigree breeding the practices of pet keeping and the complexities of more than human care and the implications of involvement for the cats themselves As such *Cat People* Human Cat Interrelatedness in the Cat Fancy will appeal to scholars from across the social sciences and humanities interested in human animal interactions multispecies leisure anthrozoology and more than human care **Unnatural**

**Selection** Katrina van Grouw,2018-07-31 A lavishly illustrated look at how evolution plays out in selective breeding *Unnatural Selection* is a stunningly illustrated book about selective breeding the ongoing transformation of animals at the hand of man More important it is a book about selective breeding on a far far grander scale a scale that encompasses all life on Earth We do call it evolution A unique fusion of art science and history this book celebrates the 150th anniversary of Charles Darwin's monumental work *The Variation of Animals and Plants under Domestication* and is intended as a tribute to what Darwin might have achieved had he possessed that elusive missing piece to the evolutionary puzzle the knowledge of how individual traits are passed from one generation to the next With the benefit of a century and a half of hindsight Katrina van Grouw explains evolution by building on the analogy that Darwin himself used comparing the selective breeding process with natural selection in the wild and like Darwin featuring a multitude of fascinating examples This is more than just a book about pets and livestock however The revelation of *Unnatural Selection* is that identical traits can occur in all animals wild

and domesticated and both are governed by the same evolutionary principles As van Grouw shows animals are plastic things constantly changing In wild animals the changes are usually too slow to see species appear to stay the same When it comes to domesticated animals however change happens fast making them the perfect model of evolution in action Suitable for the lay reader and student as well as the more seasoned biologist and featuring more than four hundred breathtaking illustrations of living animals skeletons and historical specimens *Unnatural Selection* will be enjoyed by anyone with an interest in natural history and the history of evolutionary thinking

[The Logic of Life](#) François Jacob, 2022-08-02 The most remarkable history of biology that has ever been written Michel Foucault Nobel Prize winning scientist François Jacob's *The Logic of Life* is a landmark book in the history of biology and science Focusing on heredity which Jacob considers the fundamental feature of living things he shows how since the sixteenth century the scientific understanding of inherited traits has moved not in a linear progressive way from error to truth but instead through a series of frameworks He reveals how these successive interpretive approaches focusing on visible structures internal structures especially cells evolution genes and DNA and other molecules each have their own power but also limitations Fundamentally challenging how the history of biology is told much as Thomas Kuhn's *Structure of Scientific Revolutions* did for the history of science as a whole *The Logic of Life* has greatly influenced the way scientists and historians view the past present and future of biology

[The Invention of the Modern Dog](#) Michael Worboys, Julie-Marie Strange, Neil Pemberton, 2018-10-15 The story of the thoroughly Victorian origins of dog breeds For centuries different types of dogs were bred around the world for work sport or companionship But it was not until Victorian times that breeders started to produce discrete differentiated standardized breeds In *The Invention of the Modern Dog* Michael Worboys Julie Marie Strange and Neil Pemberton explore when where why and how Victorians invented the modern way of ordering and breeding dogs Though talk of breed was common before this period in the context of livestock the modern idea of a dog breed defined in terms of shape size coat and color arose during the Victorian period in response to a burgeoning competitive dog show culture The authors explain how breeders exhibitors and showmen borrowed ideas of inheritance and pure blood as well as breeding practices of livestock horse poultry and other fancy breeders and applied them to a species that was long thought about solely in terms of work and companionship The new dog breeds embodied and reflected key aspects of Victorian culture and they quickly spread across the world as some of Britain's top dogs were taken on stud tours or exported in a growing international trade Connecting the emergence and development of certain dog breeds to both scientific understandings of race and blood as well as Britain's posture in a global empire *The Invention of the Modern Dog* demonstrates that studying dog breeding cultures allows historians to better understand the complex social relationships of late nineteenth century Britain

[Heredity Produced](#) Staffan Müller-Wille, Hans-Jörg Rheinberger, 2007 The cultural history of heredity scholars from a range of disciplines discuss the evolution of the concept of heredity from the Early Modern understanding of the act of generation to its later nineteenth century definition as the

transmission of characteristics across generations Until the middle of the eighteenth century the biological makeup of an organism was ascribed to an individual instance of generation involving conception pregnancy embryonic development parturition lactation and even astral influences and maternal mood rather than the biological transmission of traits and characteristics Discussions of heredity and inheritance took place largely in the legal and political sphere In *Heredity Produced* scholars from a broad range of disciplines explore the development of the concept of heredity from the early modern period to the era of Darwin and Mendel The contributors examine the evolution of the concept in disparate cultural realms including law medicine and natural history and show that it did not coalesce into a more general understanding of heredity until the mid nineteenth century They consider inheritance and kinship in a legal context the classification of certain diseases as hereditary the study of botany animal and plant breeding and hybridization for desirable characteristics theories of generation and evolution and anthropology and its study of physical differences among humans particularly skin color The editors argue that only when people animals and plants became more mobile and were separated from their natural habitats through exploration colonialism and other causes could scientists distinguish between inherited and environmentally induced traits and develop a coherent theory of heredity Contributors David Sabean Silvia De Renzi Ulrike Vedder Carlos L pez Beltr n Phillip K Wilson Laure Cartron Staffan M ller Wille Marc J Ratcliff Roger Wood Mary Terrall Peter McLaughlin Fran ois Duchesneau Ohad Parnes Renato Mazzolini Paul White Nicolas Pethes Stefan Willer Helmuth M ller Sievers

**The Eighteenth Centuries** David T. Gies, Cynthia Wall, 2018-02-02 Today when globalization is a buzzword invoked in nearly every realm we turn back to the eighteenth century and witness the inherent globalization of its desires and at times its accomplishments During the chronological eighteenth century learning and knowledge were intimately connected across disciplinary and geographical boundaries yet the connections themselves are largely unstudied In *The Eighteenth Centuries* twenty two scholars across disciplines address the idea of plural Enlightenments and a global eighteenth century transcending the demarcations that long limited our grasp of the period s breadth and depth Engaging concepts that span divisions of chronology and continent these essays address topics ranging from mechanist biology painted geographies and revolutionary opera to Americanization theatrical subversion of marriage and plantation architecture Weaving together many disparate threads of the historical tapestry we call the Enlightenment this volume illuminates our understanding of the interconnectedness of the eighteenth centuries

**The Secrets of Generation** Raymond Stephanson, Darren N. Wagner, 2015-01-01 The secrets of Generation is an interdisciplinary examination of the many aspects of reproduction in the eighteenth century Exploring the theme of generation from the perspective of histories of medicine literature biology technology and culture this collection offers a range of cutting edge approaches Its twenty four contributors scholars from across Europe and North America bring an international perspective to discuss reproduction in British French American German and Italian contexts The book is a collection on eighteenth century generation and its many milieus

**Where the Wild Things Are Now** Rebecca Cassidy, Molly Mullin, 2020-07-12 Domestication has often seemed a matter of the distant past a series of distinct events involving humans and other species that took place long ago Today as genetic manipulation continues to break new barriers in scientific and medical research we appear to be entering an age of biological control Are we also writing a new chapter in the history of domestication Where the Wild Things Are Now explores the relevance of domestication for anthropologists and scholars in related fields who are concerned with understanding ongoing change in processes affecting humans as well as other species From the pet food industry and its critics to salmon farming in Tasmania the protection of endangered species in Vietnam and the pigeon fanciers who influenced Darwin Where the Wild Things Are Now provides an urgently needed re examination of the concept of domestication against the shifting background of relationships between humans animals and plants

**The Red Canary** Tim Birkhead, 2014-07-18 Winner of the Consul Cremer Prize The Red Canary follows the compelling quest to turn the green canary red The creation of Dolly the sheep in the 1990s was for many people the start of a new era the age of genetically modified animals However the idea was not new for in the 1920s an amateur scientist Hans Duncker decided to genetically engineer a red canary Favored originally for their voice by the middle of the nineteenth century canaries had become so popular that millions were exported from Europe to the United States to satisfy demand During the 1870s English canary breeders caused a scandal by feeding their birds red peppers to turn them orange In the 1930s Duncker's genetics efforts caught the attention of the Nazi regime who saw him as a champion of their eugenic policies even though his ingenious experiments were not successful Nonetheless Duncker's work paved the way thirty years later for an Englishman Anthony Gill and an American Charles Bennett to succeed after recognizing that the red canary would need to be a product of both nature and nurture In Tim Birkhead's masterful hands this highly original narrative reveals how the obsession of bird keepers turned the wild canary from green to red and in the process heralded exciting but controversial developments in genetic manipulation

**Romanticism, Origins, and the History of Heredity** Christine Lehleiter, 2014-10-30 At the turn of the eighteenth century selfhood was understood as a tabularasa to be imprinted in the course of an individual's life By the middle of the nineteenth century however the individual had become defined as determined by heredity already from birth Examining novels by Goethe Jean Paul and E T A Hoffmann studies on plant hybridization treatises on animal breeding and anatomical collections Romanticism Origins and the History of Heredity delineates how romantic authors imagined the ramifications of emerging notions of heredity for the conceptualization of selfhood Focusing on three fields of inquiry inbreeding and incest cross breeding and bastardization evolution and autopoiesis Christine Lehleiter proposes that the notion of selfhood for which Romanticism has become known was not threatened by considerations of determinism and evolution but was in fact already a result of these very considerations Romanticism Origins and the History of Heredity will be of interest for literary scholars historians of science and all readers

fascinated by the long duration of subjectivity and evolutionary thought

### **The Cultural Politics of Blood, 1500-1900**

Kimberly Anne Coles, Ralph Bauer, Zita Nunes, Carla L. Peterson, 2015-01-26 The essays of this collection explore how ideas about blood in science and literature have supported at various points in history and in various places in the circum Atlantic world fantasies of human embodiment and human difference that serve to naturalize existing hierarchies

**A History of Biology** Michel Morange, 2023-08-15 This book presents a complete global history of the biological sciences from ancient times to today introducing a long term perspective to the history of biological thought while showing its fractures and upheavals through the ages The history of biology often neglects certain areas such as ecology ethology the study of non human animal behavior and plant biology areas which are covered in this work The broad global perspective offered here will allow the reader to better appreciate the nature of the interdisciplinary exchanges that have shaped the biological sciences perhaps more than any other discipline Much attention is also given to the contribution of technology the role of experimentation and more generally the social and technological environment within which scientific transformations develop

*New Directions in Spiritual Kinship* Todne Thomas, Asiya Malik, Rose Wellman, 2017-04-17 This volume examines the significance of spiritual kinship or kinship reckoned in relation to the divine in creating myriad forms of affiliations among Christians Jews and Muslims Rather than confining the study of spiritual kinship to Christian godparenthood or presuming its disappearance in light of secularism the authors investigate how religious practitioners create and contest sacred solidarities through ritual discursive and ethical practices across social domains networks and transnational collectives This book's theoretical conversations and rich case studies hold value for scholars of anthropology kinship and religion

*The Oxford Handbook of the Literature of the U.S. South* Fred Hobson, Barbara Ladd, 2016-01-04 The Oxford Handbook of the Literature of the U S South brings together contemporary views of the literature of the region in a series of chapters employing critical tools not traditionally used in approaching Southern literature As well as canonical Southern writers it examines Native American literature Latina o literature Asian American as well as African American literatures Caribbean studies sexuality studies the relationship of literature to film and a number of other topics which are relatively new to the field
