Genetics Ethics And Parenthood:

Genetics, Ethics, and Parenthood Karen Lebacqz, 1983 **The Ethics of Genetics in Human Procreation** Hille Haker, Deryck Beylerveld, 2018-04-27 This title was first published in 2000 This third volume of proceedings of the European Network for Biomedical Ethics focuses on the ethical issues surrounding the debates on reproductive medicine and genetics in human procreation Central issues include procreation and parenthood moral protection of the human embryo and fetus autonomy and recognition social implications moral reasoning in applied ethics legal regulations of assisted procreation genetic diagnosis and gene therapy The legal regulation paper evaluates the central laws and guidelines of European countries **A Christian Response to the New Genetics** David H. Smith, Cynthia B. Cohen, 2003 Life is a gift that includes powers to be used and celebrated but that doesn't necessarily justify the use of every new power that comes along This volume appeals to both secular and religious readers in the centre of the great debate over our new genetic powers These essays affirm many traditional Christian perspectives and virtues while also introducing new insights transfer genetic manipulation patenting health insurance and the moral status of embryos They conclude that it is naive to either to reject outright or wholeheartedly embrace the new genetic powers In fact sometimes the best we can expect is to learn how to cope with moral uncertainty Science, Theology, and Ethics Ted Peters, 2017-03-02 Science challenges faith to seek fuller understanding and faith challenges science to be socially and ethically responsible This book begins with faith in God the Creator of the world and then expands our understanding of creation in light of Big Bang cosmology and new discoveries in physics Examining the expanding frontier of genetic research Ted Peters draws out implications for theological understandings of human nature and human freedom Issues discussed include methodology in science and theology eschatology in cosmology and theology freedom and responsibility in evolution and theology and genetic determinism genetic engineering and cloning in relation to freedom the commodification of human life and equitable distribution of the fruits of genetic technology The dialogue model of relationship between science and religion proposed in this book provides a common ground for the disparate voices among theologians scientists and world religions This common ground has the potential to breathe new life into current debates about the world in which we live move and have our being **Genetics and the Law III** Aubrey Milunsky, 2013-11-11 It was the best of times it was the worst of times it was the age of wisdom it was the age of foolishness it was the epoch of belief it was the epoch of incredulity it was the spring of hope it was the winter of despair Charles Dickens A Tale of Two Cities Dickens of course did not have the contemporary dilemmas of modern genetics in mind Indeed we need to remind ourselves how short the history of modern genetics really is Recognition that genetic traits are carried by deoxyribonucleic acid DNA occurred only about 40 years ago Knowledge of the three dimensional structure of DNA is only about 30 years old The correct number of human chromosomes was not determined until the mid 1950s and Down syndrome was recognized only in 1959 It was not until in 1968 that the exact location of a

gene was determined on an autosomal chromosome and the study of genes rather than their protein products has been possible for barely a decade

Religious Methods and Resources in Bioethics P.F. Camenisch, 2013-03-09 A volume on religious theological methods in biomedical ethics inevitably of whether the methodological dimension can be distinguished raises the question quashed from the various other things that go on in ethical discourse It is difficult to answer this question definitively since many elements in moral conversation can be interpreted in different ways Barbara Hilkert Andolsen illustrates this issue in this volume when she defines one of her crucial categories gender justice as being both procedural and substantive normative This difficulty of finally separating the methodological from the normative arises in many areas of contemporary ethical writing both feminist and otherwise Nevertheless it seems that in many cases we can separate out the methodological issues with considerable precision Albert Jonsen and James Childress achieve just such a sharp focus in their essays This does not mean that a careful dissecting of their papers would not reveal normative elements lurking about their methodological points It is simply to say that the issues they analyze and the positions they take are at least prima facie overwhelmingly methodological They are much more about how we think about ethical matters than they are about what we think about them

Theological Bioethics Lisa Sowle Cahill, 2005-11-16 The field of bioethics was deeply influenced by religious thinkers as it emerged in the 1960s and early 1970s Since that time however a seemingly neutral political liberalism has pervaded the public sphere resulting in a deep suspicion of those bringing religious values to bear on questions of bioethics and public policy As a theological ethicist and progressive Catholic Lisa Sowle Cahill does not want to cede the religious perspective to fundamentalists and the pro life movement nor does she want to submit to the gospel of a political liberalism that champions individual autonomy as holy writ In *Theological Bioethics* Cahill calls for progressive religious thinkers and believers to join in the effort to reclaim the best of their traditions through jointly engaging political forces at both community and national levels In Cahill's eyes just access to health care must be the number one priority for this type of participatory bioethics She describes a new understanding of theological bioethics that must go beyond decrying injustice beyond opposing social practices that commercialize human beings beyond painting a vision of a more egalitarian future Such a participatory bioethics she argues must also take account of and take part in a global social network of mobilization for change it must seek out those in solidarity those involved in a common calling to create a more just social political and economic system During the past two decades Cahill has made profound contributions to theological ethics and bioethics This is a magisterial and programmatic statement that will alter how the religiously inclined understand their role in the great bioethics debates of today and tomorrow that yearn for clear thinking and prophetic wisdom
