**Radiogenic Isotope Geology** Alan P. Dickin, 2018-02-08 The third edition of *Radiogenic Isotope Geology* examines revolutionary changes in geochemical thinking that have occurred over the past fifteen years Extinct nuclide studies on meteorites have called into question fundamental geochemical models of the Earth while new dating methods have challenged conventional views of Earth history At the same time the problem of global warming has raised new questions about the causes of past and present climate change In the new edition these and other recent issues are evaluated in their scholarly and historical context so readers can understand the development of current ideas Controversial theories new analytical techniques classic papers and illustrative case studies all come under scrutiny in this book providing an accessible introduction for students and critical commentary for researchers

*Geology of the Earthquake Source* Åke Fagereng, Virginia G. Toy, Julie V. Rowland, 2011 Professor Richard Rick Sibson revolutionized structural geology by illustrating that fault rocks contain an integrated record of earthquakes Fault rock textures develop in response to geological and physical variables such as composition environmental conditions e g temperature and pressure fluid presence and strain rate These parameters also determine the rate and state variable frictional stability of a fault the dominant mineral deformation mechanism and shear strength and ultimately control the partitioning between seismic and aseismic deformation This volume contains a collection of papers that address the geological record of earthquake faulting from field based or theoretical perspectives

*Geological Evolution of Central Asian Basins and the Western Tien Shan Range* Marie-Françoise Brunet, Tom McCann, Edward R. Sobel, 2017-10-10 The geological evolution of Central Asia commenced with the formation of a complex Precambrian Palaeozoic orogen Cimmerian blocks were then accreted to the southern margin in the Mesozoic leading to tectonic reactivation of older structures and discrete episodes of basin formation The Indian and Arabian blocks collided with Asia in the Cenozoic leading to renewed structural reactivation intracontinental deformation and basin development This complex evolution resulted in the present day setting of an elongated Tien Shan range flanked by large Mesozoic Cenozoic sedimentary basins with smaller intramontane basins distributed within the range This volume presents multidisciplinary results and reviews from research groups in Europe and Central Asia that focus on the western part of the Tien Shan and some of the adjacent large sedimentary basins These works elucidate the Late Palaeozoic Cenozoic tectono sedimentary evolution of the area Emphasis is given to the collision of terranes and continents and the ensuing fault

reactivations The impact of climatic changes on sedimentation is also examined U.S. Geological Survey Bulletin ,1983
