Geographical Ecology Robert H. MacArthur, 1984-07-21 First published in 1972 and now available for the first time in paperback this book is the summation of the life work of one of the most influential scientists of our time Of permanent interest in this history and philosophy of science it is also frequently cited in the current ecological literature and is still up to date in many categories Written in MacArthur's beautifully lucid style this work will continue to be read by anyone concerned with biological ideas Lightning Print On Demand Title Geographical Ecology Robert H. Fleming, Paul A. Racey, 2010-03-15 The second largest order of mammals

Chiroptera comprises more than one thousand species of bats. Because of their mobility, bats are often the only native mammals on isolated oceanic islands where more than half of all bat species live. These island bats represent an evolutionarily distinctive and ecologically significant part of the earth's biological diversity. *Island Bats* is the first book to focus solely on the evolution, ecology, and conservation of bats living in the world's island ecosystems. Among other topics, the contributors to this volume examine how the earth's history has affected the evolution of island bats, investigate how bat populations are affected by volcanic eruptions and hurricanes, and explore the threat of extinction from human disturbance. Geographically diverse, the volume includes studies of the islands of the Caribbean, the Western Indian Ocean, Micronesia, Indonesia, the Philippines, and New Zealand. With its wealth of information from long-term studies, *Island Bats* provides timely and valuable information about how this fauna has evolved and how it can be conserved. **Australian Mammal Society**, 1985-06

Annual Plant Reviews, Insect-Plant Interactions Claudia Voelckel, Georg Jander, 2014-05-02. This latest volume in Wiley Blackwell's prestigious *Annual Plant Reviews* brings together articles that describe the biochemical, genetic, and ecological aspects of plant interactions with insect herbivores. The biochemistry section of this outstanding volume includes reviews highlighting significant findings in the area of plant signalling cascades, recognition of herbivore-associated molecular patterns, sequestration of plant defensive metabolites, and perception of plant semiochemicals by insects. Chapters in the genetics section are focused on genetic mapping of herbivore resistance traits and the analysis of transcriptional responses in both plants and insects. The ecology section includes chapters that describe plant-insect interactions at a higher level, including multitrophic interactions, investigations of the cost-benefit paradigm, and the altitudinal niche breadth hypothesis, and a re-evaluation of co-evolution in the light of recent molecular research. Written by many of the world's leading researchers in these subjects and edited by Claudia Voelckel and Georg Jander, this volume is designed for students and researchers with some background in plant molecular biology or ecology who would like to learn more about recent advances or obtain a more in-depth understanding of this field. This volume will also be of great use and interest to a wide range of plant scientists and entomologists and is an essential purchase for universities and research establishments where biological sciences are studied and taught. Kevin Gaston, Tim Blackburn, 2008-04-15. Issues of scale have become increasingly important to ecologists. This book addresses the structure of regional, large-scale ecological assemblages or communities and the influence this has at a local, small-scale level. This macroecological perspective is essential for the broader study of ecology because the structure and function of local communities cannot be properly understood without reference to the region in which they are situated. The book reviews and synthesizes the issues of current importance in macroecology, providing a balanced summary of the field that will be useful.

for biologists at advanced undergraduate level and above These general issues are illustrated by frequent reference to specific well studied local and regional assemblages an approach that serves to relate the macroecological perspective which is perhaps often difficult to comprehend to the everyday experience of local sites Macroecology is an expanding and dynamic discipline The broad aim of the book is to promote an understanding of why it is such an important part of the wider program of research into ecology Summarises the current macroecological literature Provides numerous examples of key patterns Explicitly links local and regional scale processes Exploits detailed knowledge of one species assemblage to explore broad issues in the structuring of biodiversity *Conservation Biogeography* Richard J. Ladle, Robert J. Whittaker, 2011-01-11

CONSERVATION BIOGEOGRAPHY The Earth's ecosystems are in the midst of an unprecedented period of change as a result of human action Many habitats have been completely destroyed or divided into tiny fragments others have been transformed through the introduction of new species or the extinction of native plants and animals while anthropogenic climate change now threatens to completely redraw the geographic map of life on this planet The urgent need to understand and prescribe solutions to this complicated and interlinked set of pressing conservation issues has led to the transformation of the venerable academic discipline of biogeography the study of the geographic distribution of animals and plants The newly emerged sub discipline of conservation biogeography uses the conceptual tools and methods of biogeography to address real world conservation problems and to provide predictions about the fate of key species and ecosystems over the next century This book provides the first comprehensive review of the field in a series of closely interlinked chapters addressing the central issues within this exciting and important subject *The Song of the Dodo* David Quammen, 1997-04-14 Takes a close up look at island biogeography the science of the geographic distribution of life on islands and its significance in terms of evolution and extinction **The Physical Environment of the Faeroe Islands** G.K. Hawksworth, Alan T. Bull, 2007-09-18 Non timber forest products NTFP hold economic and cultural significance for millions of people across the globe For instance hundreds of millions of rural peoples currently derive a significant portion of both their subsistence needs and cash income from gathered plant and animal products Iqbal 1993 Vedeld et al 2004 Thousands of wild NTFP are also harvested for local use in other cultural and religious activities such as rituals ceremonies and dances e.g. FAO 1991 A growing body of literature has illustrated that NTFP harvest can have ecological consequences at multiple ecological scales and that demographic responses to harvest are heavily influenced by harvesting practices see review by Ticktin 2004 However although many NTFP are harvested from disturbed habitats and subject to multiple pressures Cunningham 2001 few quantitative studies have addressed this issue For example a small number of studies have assessed the demographic effects of NTFP management practices in the context of browsing or grazing Endress

et al 2004b Ghimire et al 2005 or human induced re Ticktin 2005 Nonetheless the demographic consequences of NTFP harvest and mana ment in the context of other disturbance factors such as alien invasive species have not been addressed to date

Southwood's Ecological Methods Peter A. Henderson, 2021-04-01 Ecological Methods by the late T. R. E. Southwood and revised over the years by P. A. Henderson has developed into a classic reference work for the field biologist It provides a handbook of ecological methods and analytical techniques pertinent to the study of animals with an emphasis on non-microscopic animals in both terrestrial and aquatic environments It remains unique in the breadth of the methods presented and in the depth of the literature cited stretching right back to the earliest days of ecological research The universal availability of R as an open source package has radically changed the way ecologists analyse their data In response Southwood's classic text has been thoroughly revised to be more relevant and useful to a new generation of ecologists making the vast resource of R packages more readily available to the wider ecological community By focusing on the use of R for data analysis supported by worked examples the book is now more accessible than previous editions to students requiring support and ideas for their projects Southwood's Ecological Methods provides a crucial resource for both graduate students and research scientists in applied ecology wildlife ecology fisheries agriculture conservation biology and habitat ecology It will also be useful to the many

professional ecologists wildlife biologists conservation biologists and practitioners requiring an authoritative overview of ecological methodology
