and human life without purpose or is a doctrine of creation a necessary counterpart to the teachings of evolution What does it mean in a scientific age to claim that the eternal God works out his purpose in cosmic and organic process revealing himself in human history Does the classical doctrine of the Incarnation do justice to Christ s involvement as a human person in the travail of the real world as we know it These and other questions are looked at afresh in the light of a carefully articulated understanding of the relation of time to eternity which draws together the contributions of the ancient world the insights of existentialists and linguistic philosophy and the most recent trends in natural science On this basis skilfully argued and cogently presented the author examines the problems of divine omniscience in relation to human freewill and neurophysiological determinism and deals in a fresh manner with the great questions of Christology and the hope of eternal life The result is a work of fascinating interest in which bold metaphysical views are advanced with full awareness of the pitfalls to which such thinking was exposed at the time Of interest to philosophers and theologians at the time as well as the lay reader today it can be read in its historical context

Glaessner,1984 This 1985 book examines the origin of the present diversity of marine invertebrate animals A brief review of the early stages in the history of life discusses the time scale of the relevant geological periods alongside corresponding events in the evolutionary sequence These views of the early history of life are then matched against the fossil record and conjectures drawn from the living fauna enabling the author to attempt an overview of the early diversification of marine animal life Transitions to the succeeding assemblages of shellbearing fossils in Palaeozoic rocks are discussed and a number of stratigraphic adjustments are suggested for the period in which evolutionary events had their greatest impact on oceans and marine rock strata The need for an interdisciplinary approach to early evolution is emphasized
