Abstract. Urban geology is the study of urban geologic environments to provide a scientific basis for rational land use planning and urban development and provides information on geologic environments as a basis for city planners. Based on AEG recommendations, urban geological studies covered the urbanism and historical backgrounds, geological setting, engineering geological constraints and environmental assessments of understudied cities. The aim of this study is to provide a good view of urban geology of Tabriz city the capital of East Azerbaijan province in Iran. The topics of discussions about Tabriz city urban geology are included geologic (geomorphology, geology, climatology and hydrogeology), engineering geological (earthquake, landslide and geotechnical hazards investigations) and environmental characteristics (air, soil and water hazards assessment). The results of the urban geologic studies indicated that Tabriz city in terms of engineering geological and environmental constraints is at high risk potential and in terms of seismic activity and landslide instability is highly potential. In terms of air, soil and water pollution there are many important environmental concern in this city.

1. Introduction

Urban geology provides information on geologic environments as a basis for city planners (Assari and Mahesh 2011a, b, Assari and Assari 2012, Assari *et al.* 2012a, b, 2016). Geological information of site investigation for municipal settings like site selection, design and construction of engineering structures is very critical (UNESCO 1997-1998, AEG 1982-2004, Hatheway 2005). Without detailed geological information in urban planning, construction or municipal development can impose additional costs and risks for hidden and apparent problems on the project (Gocmez *et al.* 2006). So the first and important step in the urban planning studies is to determine the geologic situation of cities. In this regard the urban geology has provided a good explanation.

Several years of professional experiences and studies in the urban geology has been published by the Association of Engineering Geologists (AEG 1982-2004). Nowadays, this technical advice is utilizing as a standard format in urban geological studies. Standard elements of urban geological considerations for cities by AEG recommendation is classified in 13 parts (SAIEG 1997). This procedure is generally classified into 4 major categories:
