Geometry For College Students Mathematics:

Geometry for College Students I. Martin Isaacs, 2009 One of the challenges many mathematics students face occurs after they complete their study of basic calculus and linear algebra and they start taking courses where they are expected to write proofs Historically students have been learning to think mathematically and to write proofs by studying Euclidean geometry In the author's opinion geometry is still the best way to make the transition from elementary to advanced mathematics The book begins with a thorough review of high school geometry then goes on to discuss special points associated with triangles circles and certain associated lines Ceva's theorem vector techniques of proof and compass and straightedge constructions There is also some emphasis on proving numerical formulas like the laws of sines cosines and tangents Stewart's theorem Ptolemy's theorem and the area formula of Heron An important difference of this book from the majority of modern college geometry texts is that it avoids axiomatics The students using this book have had very little experience with formal mathematics Instead the focus of the course and the book is on interesting theorems and on the techniques that can be used to prove them This makes the book suitable to second or third year mathematics majors and also to secondary mathematics education majors allowing the students to learn how to write proofs of mathematical results and at the end showing them what mathematics is really all about Elementary Geometry for College Students Daniel C.

Alexander, GERALYN M. KOEBERLEIN, 2006 Building on the success of its first three editions the Fourth Edition of this market leading text covers the important principles and real world applications of plane geometry with additional chapters on solid geometry analytic geometry and an introduction to trigonometry Strongly influenced by both NCTM and AMATYC standards the text takes an inductive approach that includes integrated activities and tools to promote hands on application and discovery New Tables provide visual connections between figures and concepts and help students better assess their level of mastery and test readiness New Chapter Tests have been added to the end of every chapter New Proofs have been varied to include written and visual proofs as well as comparisons to support students with different learning styles New Exercise sets in the Student Study Guide with cross references to the text offer additional practice and review New Technology related margin features encourage the use of the Geometer's Sketchpad graphing calculators and further explorations New Coverage now includes Section 2.6 Symmetry and Transformations New Technology Package includes the HM ClassPrep CD with computerized test bank powered by Diploma Updated The number of Exercises and Explorations has been increased Highly visual approach begins with the presentation of an idea followed by the examination and development of a theory verification of the theory through deduction and finally application of the principles to the real world Discovery features reinforce the text's inductive approach activities integrated throughout enable students to discover geometry concepts on their own and section tools provide with hands on application of geometric concepts Applications reinforce the connection of geometry to the real world high interest Chapter Openers introduce the principal notion of the chapter and relate to the real

world and A Perspective On sections conclude each chapter providing sketches that are interesting sometimes historical and always informative Summaries of constructions postulates and theorems are provided and an easy to navigate numbering system for postulates and theorems provides a user friendly structure In response to user feedback paragraph proofs feature more prominently in this edition Comprehensive appendices include Algebra Review and An Introduction to Logic A glossary of terms a summary of applications in the text and selected answers are also provided in the back of the text
