## **Genetics And Evolution Of Aging:**

**Genetics and Evolution of Aging** Michael R. Rose, Caleb E. Finch, 2013-03-09 Aging is one of those subjects that many biologists feel is largely unknown. Therefore they often feel comfortable offering extremely facile generalizations that are either unsupported or directly refuted in the experimental literature. Despite this unfortunate precedent, aging is a very broad phenomenon that calls out for integration beyond the mere collecting together of results from disparate laboratory organisms. With this in mind, Part One offers several different synthetic perspectives. The editors, Rose and Finch, provide a verbal synthesis of the field that deliberately attempts to look at aging from both sides: the evolutionary and the molecular. The articles by Charlesworth and Clark both provide population genetic perspectives on aging; the former more mathematical, the latter more experimental. Bell takes a completely different approach, arguing that aging may not be the result of evolutionary forces. Bell's model instead proposes that aging could arise from the progressive deterioration of chronic host-pathogen interactions. This is the first detailed publication of this model. It marks something of a return to the type of aging theories that predominated in the 1950s and 1960s: theories like the somatic mutation and error catastrophe theories. We hope that the reader will be interested by the contrast in views between the articles based on evolutionary theory and that of Bell. MR Rose and C E Finch eds. *Genetics and Evolution of Aging*. 512 pp. 1994. Kluwer Academic Publishers. The Journal of Uniform Genetics of Aging 2. Michael R. Rose, Caleb E. Finch. *Genetic Effects on Aging*. David E. Harrison, 1990-08-09. This volume provides background knowledge useful to those setting out to do genetic studies of aging in mammals and raises vital questions: How many genes are important in mammalian aging? What are the optimal methods for their study? To what degree are patterns of aging and patterns of growth and development part of the same process? Do patterns of development predict subsequent patterns of growth and aging? Are there a few fundamental aging processes or does every biological system age? The rapid rate of progress in this field required a new volume with a new approach based on the combination of classical genetics and the powerful new tools of molecular genetics. Although mammalian systems are emphasized, representatives of the advanced genetic studies in *Drosophila* and other model systems are included. The purpose is to enrich and stimulate genetic studies of mammalian aging by suggesting and evaluating future possibilities. **The Evolution of Aging** Theodore C. Goldsmith, 2006. Goldsmith provides a historical review of biological aging theories, including underlying evolution and genetics issues, and describes exciting recent discoveries and new theories that are causing renewed interest in aging by design. *Death* Philippe Huneman, 2023-02-14. This book addresses several key issues in the biological study of death with the intent of capturing their genealogy, the assumptions and presuppositions they make, and the way that they open specific new research avenues. The book is divided into two sections: the first considers physiology and the second evolutionary biology. In the first part, Huneman reconstructs a conceptual genealogy of experimental physiology based on an in-depth analysis of Bichat's investigations of death processes. In the second part, he explains that biologists in the late 1950s put forth

a research framework that evolutionarily accounts for death in terms of either an effect of the weakness of natural selection or a by product of natural selection for early reproduction He illustrates how the biology of death is a central field and that studying it provides insight into the way that the epistemic structure of this knowledge has been constituted persists until now and may conflict with some traditional philosophical ideas

**Evolutionary Biology of Aging** Michael R. Rose,1991 In this provocative book on the process of growing old Michael Rose goes right to the heart of the fundamental unsolved problem of biology Why do we grow old The proposed theory is that to understand aging we must understand its evolution only then do its taxonomic distribution and its genetic and physiological mechanisms become intelligible Evidence is produced from the fields of cell biology physiology and gerontology

*Evolutionary Genetics* Charles W. Fox,Jason B. Wolf,2006-04-27 Charles Fox and Jason Wolf have brought together leading researchers to produce a cutting edge primer introducing readers to the major concepts in modern evolutionary genetics This book spans the continuum of scale from studies of DNA sequence evolution through proteins and development to multivariate phenotypic evolution and the continuum of time from ancient events that lead to current species diversity to the rapid evolution seen over relatively short time scales in experimental evolution studies Chapters are accessible to an audience lacking extensive background in evolutionary genetics but also current and in depth enough to be of value to established researchers in evolution biology

**Aging is a Group-Selected Adaptation** Joshua Mitteldorf,2017-02-03 Although books exist on the evolution of aging this is the first book written from the perspective of aging as an adaptive program It offers an insight into the implications of research on aging genetics The author proposes the Demographic Theory of Senescence whereby aging has been affirmatively selected because it levels the death rate over time helping stabilize population dynamics and prevent extinctions

Willis, 2010-12-21 The Handbook of the Psychology of Aging Seventh Edition provides a basic reference source on the behavioral processes of aging for researchers graduate students and professionals It also provides perspectives on the behavioral science of aging for researchers and professionals from other disciplines The book is organized into four parts Part 1 reviews key methodological and analytical issues in aging research It examines some of the major historical influences that might provide explanatory mechanisms for a better understanding of cohort and period differences in psychological aging processes Part 2 includes chapters that discuss the basics and nuances of executive function the history of the morphometric research on normal brain aging and the neural changes that occur in the brain with aging Part 3 deals with the social and health aspects of aging It covers the beliefs that individuals have about how much they can control various outcomes in their life the impact of stress on health and aging and the interrelationships between health disparities social class and aging Part 4 discusses the emotional aspects of aging family caregiving and mental disorders and legal capacities in older adults Contains all the main areas of psychological gerontological research in one volume Entire section on neuroscience and aging Begins with a section on theory and methods Edited by one of the father of gerontology Schaie and contributors represent top scholars in gerontology      Evolutionary Arguments on Aging, Disease, and other Topics Aging Giacinto Libertini, 2011-05-09 Every character of a living being has its function the teeth are there to chew the lungs to breathe the eyes to see etc But what is the function of aging if there even is one If it is true that the living being is modelled by natural selection what are the evolutionary needs that bring about limited longevity or variable longevity according to the species Why does a mouse live less than two years a tortoise many tens of years and Pinus Aristata not seem to age at all Are these differences casual or is evolution somehow at the origin of it all as A Weismann hypothesized back in the last century The results are beyond all expectations it is possible to provide an explanation for the why of senescence in evolutionary terms Another important topic is the meaning of disease phenomenon in the context of evolutionary theory Illness is a set of phenomena that is perfectly anticipated and rationally classifiable by evolutionary theory This book printed in Italian in 1983 broached these and other questions with a rigorous evolutionary approach using mathematical models in its arguments for the graphic expression and the confirmation of the models      Extended Heredity Russell Bonduriansky, Troy Day, 2020-04-14 Bonduriansky and Day challenge the premise that genes alone mediate the transmission of biological information across generations and provide the raw material for natural selection They explore the latest research showing that what happens during our lifetimes and even our parents and grandparents lifetimes can influence the features of our

descendants Based on this evidence Bonduriansky and Day develop an extended concept of heredity that upends ideas about how traits can and cannot be transmitted across generations opening the door to a new understanding of inheritance evolution and even human health Adapted from publisher description
