*Bringing Fossils to Life* Donald R. Prothero, 2013-11-12 The leading textbook in its field this work applies paleobiological principles to the fossil record while detailing the evolutionary history of major plant and animal phyla It incorporates current research from biology ecology and population genetics Written for biology and geology undergrads the text bridges the gap between purely theoretical paleobiology and solely descriptive invertebrate paleobiology books emphasizing the cataloguing of live organisms over dead objects This third edition revises art and research throughout expands the coverage of invertebrates includes a discussion of new methodologies and adds a chapter on the origin and early evolution of life

**Punctuated Equilibrium** Stephen Jay GOULD, Stephen Jay Gould, 2009-06-30 In 1972 Stephen Jay Gould took the scientific world by storm with his paper on punctuated equilibrium Challenging a core assumption of Darwin's theory of evolution it launched the controversial idea that the majority of species originates in geological moments punctuations and persists in stasis Now thirty five years later Punctuated Equilibrium offers his only book length testament on a theory he fiercely promoted repeatedly refined and tirelessly defended      **Stephen Jay Gould** Warren D. Allmon, Patricia Kelley, Robert Ross, 2009 Considered by many during his lifetime as the most well known scientist in the world Stephen Jay Gould left an enormous and influential body of work A Harvard professor of paleontology evolutionary biology and the history of science Gould provided major insights into our understanding of the history of life He helped to reinvigorate paleontology launch macroevolution on a new course and provide a context in which the biological developmental stages of an organism's embryonic growth could be integrated into an understanding of evolution This book is a set of reflections on the many areas of Gould's intellectual life by the people who knew and understood him best former students and prominent close collaborators Mostly a critical assessment of his legacy the chapters are not technical contributions but rather offer a combination of intellectual bibliography personal memoir and reflection on Gould's diverse scientific achievements The work includes the most complete bibliography of his writings to date and offers a multi dimensional view of Gould's life work not to be found in any other volume      *Persuaded by the Evidence* Jerry Bergman, Doug Sharp, 2008 A unique and interesting collection of true stories from Christians each sharing his personal journey to find the biblical truth of a six day creation From scientists in the midst of complex research to youth ministers and more see how each began at a different point and place in his life to question the supposed truth of evolution and how faith and actual evidence led to his embracing a creation based biblical world view In their testimonies you will read about their search for answers often unavailable through their school their church or scientific knowledge and how the discoveries they made have shaped their faith and changed their

**Shaking the Tree** Henry Gee, 2000-05 Nature has published news about the history of life ever since its first issue in 1869 in which T H Huxley Darwin's bulldog wrote about Triassic dinosaurs In recent years the field has enjoyed a tremendous flowering due to new investigative techniques drawn from cladistics a revolutionary method for charting evolutionary relationships and molecular biology Shaking the Tree brings together nineteen review articles written for Nature over the past decade by many of the major figures in paleontology and evolution from Stephen Jay Gould to Simon Conway Morris Each article is brief accessible and opinionated providing shoot from the hip accounts of the latest news and debates Topics covered include major extinction events homeotic genes and body plans the origin and evolution of the primates and reconstructions of phylogenetic trees for a wide variety of groups The editor Henry Gee gives new commentary and updated references Shaking the Tree is a one stop resource for engaging overviews of the latest research in the history of life on Earth

**Creative Evolution?!** John Howland Campbell, J. William Schopf, 1994 This text is designed as a supplemental reader for any evolution course or for readers who are interested in expanding their knowledge on evolutionary discussions Evolution

*Creative Defense* Nicholas Comninellis, 2001-09-01 In this incredible resource author Nicholas Comninellis comes to the defense of anyone troubled by the inconsistencies of evolutionary theory Examining various disciplines Comninellis presents the contradictions and often absurd conclusions that proponents of evolution pass off as a good science by presenting conclusive documented evidence Facts are arranged and referenced by subject in an easy to use format Contains 1000 of the most widely acclaimed scientific historic and position references in the creation evolution debate One of the most comprehensive resources available Special section of web site addresses to aid in finding the most up to date information Strategies for public speaking on creation evolution An extremely useful too for ever defender of creation

*Evolution* Donald R. Prothero, 2017-08-22 Donald R Prothero's Evolution is an entertaining and rigorous history of the transitional forms and series found in the fossil record Its engaging narrative of scientific discovery and well grounded analysis has led to the book's widespread adoption in courses that teach the nature and value of fossil evidence for evolution Evolution tackles systematics and cladistics rock dating neo Darwinism and macroevolution It includes extensive coverage of the primordial soup invertebrate transitions the development of the backbone the reign of the dinosaurs and the transformation from early hominid to modern human The book also details the many alleged missing links in the fossil record including some of the most recent discoveries that flesh

out the fossil timeline and the evolutionary process In this second edition Prothero describes new transitional fossils from various periods vividly depicting such bizarre creatures as the Odontochelys or the turtle on the half shell fossil snakes with legs and the Frogamander a new example of amphibian transition Prothero's discussion of intelligent design arguments includes more historical examples and careful examination of the experiments and observations that are exploited by creationists seeking to undermine sound science education With new perspectives Prothero reframes creationism as a case study in denialism and pseudoscience rather than a field with its own intellectual dynamism The first edition was hailed as an exemplary exploration of the fossil evidence for evolution and this second edition will be welcome in the libraries of scholars teachers and general readers who stand up for sound science in this post truth era

**The Origin and Evolution of Cultures** Los Angeles Robert Boyd Professor of Anthropology University of California,Davis Peter J. Richerson Professor of Environmental Science and Policy University of California,2004-12-22 Oxford presents in one convenient and coherently organized volume 20 influential but until now relatively inaccessible articles that form the backbone of Boyd and Richerson's path breaking work on evolution and culture Their interdisciplinary research is based on two notions First that culture is crucial for understanding human behavior unlike other organisms socially transmitted beliefs attitudes and values heavily influence our behavior Secondly culture is part of biology the capacity to acquire and transmit culture is a derived component of human psychology and the contents of culture are deeply intertwined with our biology Culture then is a pool of information stored in the brains of the population that gets transmitted from one brain to another by social learning processes Therefore culture can account for both our outstanding ecological success as well as the maladaptations that characterize much of human behavior The interest in this collection will span anthropology psychology economics philosophy and political science

**The Origin and Evolution of Cultures** Robert Boyd,Peter J. Richerson,2005 The Origin and Evolution of Cultures presents articles based on two notions That culture is crucial for understanding human behaviour and that culture is part of biology Interest in this collection will span anthropology psychology economics philosophy and political science

**Stephen Jay Gould and the Politics of Evolution** David F. Prindle, **Evolutionary Developmental Biology** Brian K. Hall,2013-06-29 Many changes that occur during the embryonic development of an individual animal can be seen as a parallel to changes that have occurred in species or groups of species during evolutionary time This book covers the interaction between developmental and evolutionary changes in animals

Heterochrony Michael L. McKinney,K.J. McNamara,2013-04-17 The authors outline evolutionary thought from pre Darwinian biology to current research on the subject They broadly label the factors of evolution as intrinsic and extrinsic with Darwin favoring the latter by emphasizing the process of natural selection and later followers of Darwin carrying t

**Astrobiology** Julian Chela-Flores,Guillermo A. Lemarchand,John Oró,2012-12-06 The general topic of this book concerns the origin evolution distribution and destiny of life in the Universe It discusses the transition from inert matter to cellular life and its evolution to fully developed intelligent

beings and also the possibility of life occurring elsewhere particularly in other environments in our own and other solar systems The theoretical framework of Astrobiology may be probed with a forthcoming series of space missions which at the time of writing are being planned for the next 10 to 15 years Advanced extraterrestrial life can also be probed by means of radioastronomy in the well established project of search for extraterrestrial intelligence Astrobiology pays special attention to the robust growth in our capacity to search for microorganisms as well as signals of extraterrestrial life with recent significant technological progress in planetary science and radioastronomy The progress of the main space agencies is highlighted Audience This volume is aimed at advanced undergraduate and graduate students as well as researchers in the many areas of basic earth and life sciences that contribute to the study of chemical evolution and the origin of life

**The Story of Evolution in 25 Discoveries** Donald R. Prothero, 2020-12-22 The theory of evolution unites the past present and future of living things It puts humanity's place in the universe into necessary perspective Despite a history of controversy the evidence for evolution continues to accumulate as a result of many separate strands of amazing scientific sleuthing In The Story of Evolution in 25 Discoveries Donald R Prothero explores the most fascinating breakthroughs in piecing together the evidence for evolution In twenty five vignettes he recounts the dramatic stories of the people who made crucial discoveries placing each moment in the context of what it represented for the progress of science He tackles topics like what it means to see evolution in action and what the many transitional fossils show us about evolution following figures from Darwin to lesser known researchers as they unlock the mysteries of the fossil record the earth and the universe The book also features the stories of animal species strange and familiar including humans and our ties to some of our closest relatives and more distant cousins Prothero's wide ranging tales showcase awe inspiring and bizarre aspects of nature and the powerful insights they give us into the way that life works Brisk and entertaining while firmly grounded in fundamental science The Story of Evolution in 25 Discoveries is a captivating read for anyone curious about the evidence for evolution and what it means for humanity

Macroevolution Emanuele Serrelli, Nathalie Gontier, 2015-02-13 This book is divided in two parts the first of which shows how beyond paleontology and systematics macroevolutionary theories apply key insights from ecology and biogeography developmental biology biophysics molecular phylogenetics and even the sociocultural sciences to explain evolution in deep time In the second part the phenomenon of macroevolution is examined with the help of real life history case studies on the evolution of eukaryotic sex the formation of anatomical form and body plans extinction and speciation events of marine invertebrates hominin evolution and species conservation ethics The book brings together leading experts who explain pivotal concepts such as Punctuated Equilibria Stasis Developmental Constraints Adaptive Radiations Habitat Tracking Turnovers Mass Extinctions Species Sorting Major Transitions Trends and Hierarchies key premises that allow macroevolutionary epistemic frameworks to transcend microevolutionary theories that focus on genetic variation selection migration and fitness Along the way the contributing authors review ongoing debates and current scientific challenges detail

new and fascinating scientific tools and techniques that allow us to cross the classic borders between disciplines demonstrate how their theories make it possible to extend the Modern Synthesis present guidelines on how the macroevolutionary field could be further developed and provide a rich view of just how it was that life evolved across time and space In short this book is a must read for active scholars and because the technical aspects are fully explained it is also accessible for non specialists Understanding evolution requires a solid grasp of above population phenomena Species are real biological individuals and abiotic factors impact the future course of evolution Beyond observation when the explanation of macroevolution is the goal we need both evidence and theory that enable us to explain and interpret how life evolves at the grand scale
