Geochemical Atlas Of The Eastern Barents Region:

Geochemical Atlas of Eastern Barents Region R. Salminen, V. Chekushin, M. Tenhola, I. Bogatyrev, V. Gregorauskiene, E. Fedotova, G. Kashulina, H. Niskavaara, S.P. Glavatskikh, A. Polischuok, O. Tomilina, Kari Rissanen, L. Zhdanova, 2005-02-09 From 1999 to 2003 a multipurpose regional geochemical mapping project was carried out in Finland and the NW part of Russia An important aim of the project is to define the anthropogenic impact in relation to the natural variations in regional geochemical baselines of heavy metals and other elements over a large area containing several of the largest industrial emitters in Europe but also some of its most pristine areas Terrestrial moss the organic layer stream waters and the C horizon soil samples were collected from 1085 sites in Russia and 288 sites in Finland giving an average density of one site per 1000 km² Both total and aqua regia extractable element concentrations were determined from Maps showing the distribution of 48 elements and other parameters are included in this atlas The anomaly patterns of minerogenic C horizon data are strongly controlled by element distributions in the bedrock Stream water data are mainly controlled by geological formations and structures both for major and trace elements but in some cases the influence of anthropogenic activities could be detected as elevated heavy metal concentrations Anomaly patterns from moss data reflect mainly anthropogenic activities but in areas such as mountains and tundra the geogenic dust also has a strong influence It was not possible to detect any long distance airborne transport of heavy metals from industrialized areas to clean arctic regions

impact in ecosystems and human health are discussed in this monograph *Essentials of Medical Geology* Olle Selinus, 2013-03-30 *Essentials of Medical Geology* reviews the essential concepts and practical tools required to tackle environmental and public health problems. It is organized into four main sections. The first section deals with the fundamentals of environmental biology, the natural and anthropogenic sources of health elements that impact health and illustrate key biogeochemical transformations. The second section looks at the geological processes influencing human exposure to specific elements such as radon, arsenic, fluorine, selenium, and iodine. The third section presents the concepts and techniques of pathology, toxicology, and epidemiology that underpin investigations into the human health effects of exposure to naturally occurring elements. The last section provides a toolbox of analytical approaches to environmental research and medical geology investigations. *Essentials of Medical Geology* was first published in 2005 and has since won three prestigious rewards. The book has been recognized as a key book in both medical and geology fields and is widely used as textbook and reference book in these fields. For this revised edition, editors and authors have updated the content that evolved a lot during 2005 and added two new chapters on public health and agriculture and health. This updated volume can now continue to be used as a textbook and reference book for all who are interested in this important topic and its impacts on the health and wellbeing of many millions of people all over the world. Addresses key topics at the intersection of environmental science and human health. Developed by 60 international experts from 20 countries and edited by professionals from the International Medical Geology Association (IMGA). Written in non-technical language for a broad spectrum of readers ranging from students and professional researchers to policymakers and the general public. Includes color illustrations throughout, references for further investigation, and other aids to the reader. *Statistical Data Analysis Explained* Clemens Reimann, Peter Filzmoser, Robert Garrett, Rudolf Dutter, 2011-08-31 Few books on statistical data analysis in the natural sciences are written at a level that a non-statistician will easily understand. This is a book written in colloquial language, avoiding mathematical formulae as much as possible, trying to explain statistical methods using examples and graphics instead. To use the book efficiently, readers should have some computer experience. The book starts with the simplest of statistical concepts and carries readers forward to a deeper and more extensive understanding of the use of statistics in environmental sciences. The book concerns the application of statistical and other computer methods to the management, analysis, and display of spatial data. These data are characterised by including locations, geographic coordinates, which leads to the necessity of using maps to display the data and the results of the statistical methods. Although the book uses examples from applied geochemistry and a large geochemical survey, in particular, the principles and ideas equally well apply to other natural sciences, e.g. environmental sciences, pedology, hydrology, geography, forestry, ecology, and health sciences, epidemiology. The book is unique because it supplies direct access to software solutions based on R, the Open Source version of the S language for statistics, for applied environmental statistics. For all graphics and tables presented in the book, the R scripts are provided in the form of

executable R scripts In addition a graphical user interface for R called DAS R was developed for convenient fast and interactive data analysis Statistical Data Analysis Explained Applied Environmental Statistics with R provides on an accompanying website the software to undertake all the procedures discussed and the data employed for their description in the book
