Religion and Literature in Western England, 600-800 Patrick Sims-Williams, 2005-06-30 Describes the early conversion to Christianity of the pagan peoples of an area stretching from Stratford upon Avon to Offa s Dyke *Geology Explained in the Severn Vale and Cotswolds; Illustrations by the Author* William Dreghorn, **The Malvern Hills** Mark Bowden, 2013-04-15 Examines the landscape of the Malvern Hills a ridge of ancient volcanic rocks along the western edge of the Severn Valley The survey ranges from the early prehistoric period to the present day including the two large Iron Age hillforts on the ridge

The Buildings of England: Gloucestershire: Cotswolds Nikolaus Pevsner, 1970 **Stochastic Population Dynamics in Ecology and Conservation** Russell Lande, Steinar Engen, Bernt-Erik Sæther, 2003 All populations fluctuate stochastically creating a risk of extinction that does not exist in deterministic models with fundamental consequences for both pure and applied ecology This book provides the most comprehensive introduction to stochastic population dynamics combining classical background material with a variety of modern approaches including new and previously unpublished results by the authors illustrated with examples from bird and mammal populations and insect communities Demographic

and environmental stochasticity are introduced with statistical methods for estimating them from field data The long run growth rate of a population is explained and extended to include age structure with both demographic and environmental stochasticity Diffusion approximations facilitate the analysis of extinction dynamics and the duration of the final decline Methods are developed for estimating delayed density dependence from population time series using life history data Metapopulation viability and the spatial scale of population fluctuations and extinction risk are analyzed Stochastic dynamics and statistical uncertainty in population parameters are incorporated in Population Viability Analysis and strategies for sustainable harvesting Statistics of species diversity measures and species abundance distributions are described with implications for rapid assessments of biodiversity and methods are developed for partitioning species diversity into additive components Analysis of the stochastic dynamics of a tropical butterfly community in space and time indicates that most of the variance in the species abundance distribution is due to ecological heterogeneity among species so that real communities are far from neutral
