ABSTRACT

The study investigated the effects of technology-integrated guided inquiry (TGIBL), guided inquiry (GIBL), and traditional (TRAD) strategies on pre-service mathematics teachers' attitudes towards geometry in college of teacher educations. The study employed nonequivalent quasi-experimental design with two experimental groups and control group. A three-stage sampling method was used. The experimental groups were exposed to TGIBL (n=48) and GIBL (n=38), while comparison group (n=30) with TRAD approach. The geometry attitude scale (GAS) questionnaire was the instrument employed to collect data from 116 PSMT. A one-way analysis of covariance, multiple comparison test and paired sample t-test were used to analyze data. The results of the study revealed that pre-service mathematics teachers who were exposed to the TGIBL had gained positive attitudes towards learning geometry than their counterparts exposed to the GIBL and TRAD, respectively. Moreover, the group taught with GIBL also shown to have a statistically significant difference with TRAD on attitude. Similarly, paired sample t-test also favored post-test score. Based on the results, TGIBL and GIBL approach should be embraced in the college of teacher educations to reinforce favorable attitudes towards learning geometry among pre-service mathematics teachers.

INTRODUCTION

Throughout history, geometry has been an important subject in the mathematics curriculum. It is a subject that provides skills such as logic, deductive reasoning, analytical reasoning, and problem-solving skills. In addition, geometry is a mathematical concept associated with other fields of mathematics such as measurement, algebra, calculus, trigonometry, etc. and is also employed by architects, engineers, physicists, and many other professionals. According to Fyfe et al. (2015), the lack of geometric ideas is the primary reason why students have trouble understanding mathematics. As a result, researchers stated that learners' mathematical learning abilities are highly correlated with geometric understanding (Atebe & Schafer, 2008, 2011; Clements et al., 2018; Hannafin et al., 2008).

The learning competency of mathematics and geometry is determined by factors such as attitude, instructional approaches, and teachers' content knowledge (Kilpatrick et al., 2001; Mazana et al., 2019; MOE, 2013). Attitude is considered to be a crucial contributor to higher or lower mathematics and geometry performance (Mohamed &

Waheed, 2011; Ngusa & Mbuti, 2017). An attitude is a positive or negative disposition towards an object, circumstance, concept, and/or event (Mentah et al., 2013). As a result, attitude must be assessed in order to explain variability in learners' mathematics and geometry understanding. According to Mohamed and Waheed (2011), the PSMTs' attitude toward geometry is a well-established factor that determines their geometry achievement and their future career in schools. In addition, Guner (2012) and Tapia and Marsh (2004) revealed that attitude towards geometry plays an important role in determining achievement in geometry. PSMTs' thoughts about the nature of mathematics learning and attitudes have a significant impact on their future teaching practices (Cooke, 2015).

From multiple viewpoints, researchers have suggested the existence of different components of attitudes. Davadas and Lay (2017), for example, suggested motivation, enjoyment, self-confidence, and value as components of attitudes. Likewise, Mullis et al. (2020) used enjoyment, confidence, and like as components of attitude. Similarly, attitude and its dimensions of attitude towards geometry, such as self-confidence, value, enjoyment, and motivation, have been examined and considered in this study (Sryeda, 2016; Tapia, 1996). Geometry Aguided Inquiry:

Euclidean Geometry David M. Clark, 2012-06-26 Geometry has been an essential element in the study of mathematics since antiquity. Traditionally we have also learned formal reasoning by studying Euclidean geometry. In this book David Clark develops a modern axiomatic approach to this ancient subject both in content and presentation. Mathematically Clark has chosen a new set of axioms that draw on a modern understanding of set theory and logic, the real number continuum and measure theory, none of which were available in Euclid's time. The result is a development of the standard content of Euclidean geometry with the mathematical precision of Hilbert's foundations of geometry. In particular, the book covers all the topics listed in the Common Core State Standards for high school synthetic geometry. The presentation uses a guided inquiry, active learning pedagogy. Students benefit from the axiomatic development because they themselves solve the problems and prove the theorems, with the instructor serving as a guide and mentor. Students are thereby empowered with the knowledge that they can solve problems on their own without reference to authority. This book, written for an undergraduate axiomatic geometry course, is particularly well suited for future secondary school teachers. In the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life, MSRI and the AMS are publishing books in the Mathematical Circles Library series as a service to young people, their parents and teachers, and the mathematics profession.

The Classification of Quadrilaterals Zalman Usiskin, 2008-01-01

This monograph reports on an analysis of a small part of the mathematics curriculum: the definitions given to quadrilaterals. This kind of research, which we call micro-curricular analysis, is often undertaken by those who create curriculum, but it is not usually done systematically, and it is rarely published. Many terms in mathematics education can be found to have different definitions in mathematics books. Among these are natural number, parallel lines, and congruent triangles, trapezoid, and isosceles trapezoid; the formal definitions of the trigonometric functions and absolute value; and implicit definitions of the arithmetic operations: addition, subtraction, multiplication, and division. Yet many teachers and students do not realize there is a choice of definitions for

mathematical terms And even those who realize there is a choice may not know who decides which definition of any mathematical term is better and under what criteria Finally rarely are the mathematical implications of various choices discussed As a result many students misuse and otherwise do not understand the role of definition in mathematics We have chosen in this monograph to examine a bit of mathematics for its definitions the quadrilaterals We do so because there is some disagreement in the definitions and consequently in the ways in which quadrilaterals are classified and relate to each other The issues underlying these differences have engaged students teachers mathematics educators and mathematicians There have been several articles and a number of essays on the definitions and classification of quadrilaterals But primarily we chose this specific area of definition in mathematics because it demonstrates how broad mathematical issues revolving around definitions become reflected in curricular materials While we were undertaking this research we found that the area of quadrilaterals supplied grist for broader and richer discussions than we had first anticipated The intended audience includes curriculum developers researchers teachers teacher trainers and anyone interested in language and its use

The Geometric Supposer Judah L. Schwartz, Michal Yerushalmy, Beth Wilson, 2013-06-17 This volume is a case study of education reform and innovation using technology that examines the issue from a wide variety of perspectives It brings together the views and experiences of software designers curriculum writers teachers and students researchers and administrators Thus it stands in contrast to other analyses of innovation that tend to look through the particular prisms of research classroom practice or software design The Geometric Supposer encourages a belief in a better tomorrow for schools On its surface the Geometric Supposer provides the means for radically altering the way in which geometry is taught and the quality of learning that can be achieved At a deeper level however it suggests a powerful metaphor for improving education that can be played out in many different instructional contexts

There Is No One Way to Teach Math Henri Picciotto, Robin Pemantle, 2024-09-10 A collaboration between a seasoned math teacher and a research mathematician this resource offers balanced instructional ideas based on student intellectual engagement and skilled teacher leadership It is solidly grounded in many areas of classroom practice but rather than serving as a prescriptive how to manual the authors invite reflection and discussion across classrooms and math departments much in the way you would share ideas in the teachers lounge or across the table at a conference Chapters offer practical suggestions and concrete examples to teachers of grades 6 12 on just about every aspect of the job manipulatives technology lesson planning group work classroom discussion and more In opposition to the idea of a one size fits all curriculum the authors explain how to integrate teaching techniques formal and informal student centered and teacher led experiential and rigorous Chapters also include vignettes as well as many links to curricular materials Ideal for math educators of grades 6 12 this book is both comprehensive in its strategies and sensitive to the complexities of teaching For these reasons math departments coaches teacher leaders and faculty at other levels can also easily reference its content where relevant This book offers multiple entry points for teachers and departments to discuss

Two-Dimensional Geometries: A Problem-Solving Approach C. Herbert Clemens, 2019-03-20 This book on two dimensional geometry uses a problem solving approach to actively engage students in the learning process The aim is to guide readers through the story of the subject while giving them room to discover and partially construct the story themselves The book bridges the study of plane geometry and the study of curves and surfaces of non constant curvature in three dimensional Euclidean space One useful feature is that the book can be adapted to suit different audiences The first half of the text covers plane geometry without and with Euclid's Fifth Postulate followed by a brief synthetic treatment of spherical geometry through the excess angle formula This part only requires a background in high school geometry and basic trigonometry and is suitable for a quarter course for future high school geometry teachers A brief foray into the second half could complete a semester course The second half of the text gives a uniform treatment of all the complete simply connected two dimensional geometries of constant curvature one geometry for each real number its curvature including their groups of isometries geodesics measures of lengths and areas as well as formulas for areas of regions bounded by polygons in terms of the curvature of the geometry and the sum of the interior angles of the polygon A basic knowledge of real linear algebra and calculus of several real variables is useful background for this portion of the text
