Logic Colloquium '01 Matthias Baaz, Sy-David Friedman, Jan Krajíček, 2017-03-30 Since their inception the Perspectives in Logic and Lecture Notes in Logic series have published seminal works by leading logicians Many of the original books in the series have been unavailable for years but they are now in print once again This volume the twentieth publication in the Lecture Notes in Logic series contains the proceedings of the 2001 European Summer Meeting of the Association for Symbolic Logic held at the Vienna University of Technology Two long articles present accessible expositions on resolution theorem proving and the determinacy of long games The remaining articles cover separate research topics in many areas of mathematical logic including applications in computer science proof theory set theory model theory computability theory linguistics and aspects of philosophy This collection will interest not only mathematical logicians but also philosophical logicians historians of logic computer scientists formal linguists and mathematicians working in algebra abstract analysis and topology

**Some Problems of Unlikely Intersections in Arithmetic and Geometry** Umberto Zannier, 2012-03-25 This book considers the so called Unlikely Intersections a topic that embraces well known issues such as Lang's and Manin Mumford's concerning torsion points in subvarieties of tori or abelian varieties More generally the book considers algebraic subgroups that meet a given subvariety in a set of unlikely dimension The book is an expansion of the Hermann Weyl Lectures delivered by Umberto Zannier at the Institute for Advanced Study in Princeton in May 2010 The book consists of four chapters and seven brief appendixes the last six by David Masser The first chapter considers multiplicative algebraic groups presenting proofs of several developments ranging from the origins to recent results and discussing many applications and relations with other contexts The second chapter considers an analogue in arithmetic and several applications of this The third chapter introduces a new method for approaching some of these questions and presents a detailed application of this by Masser and the author to a relative case of the Manin Mumford issue The fourth chapter focuses on the Andr  Oort conjecture outlining work by Pila

**Tame Geometry with Application in Smooth Analysis** Yosef Yomdin, Georges Comte, 2004-02-07 The Morse Sard theorem is a rather subtle result and the interplay between the high order analytic structure of the mappings involved and their geometry rarely becomes apparent The main reason is that the classical Morse Sard theorem is basically qualitative This volume gives a proof and also an explanation of the quantitative Morse Sard theorem and related results beginning with the study of polynomial or tame mappings The quantitative questions answered by a combination of the methods of real semialgebraic and tame geometry and integral geometry turn out to be nontrivial and highly productive The important advantage of this approach is that it allows the separation of the role of high differentiability and that of algebraic geometry in a smooth setting all the geometrically relevant phenomena appear already for polynomial mappings The geometric properties obtained are stable with respect to approximation and can be imposed on smooth functions via polynomial approximation

**Science Bulletin of Josai University** ,1996 American Book Publishing Record ,1997-09 **Arc Spaces and Additive Invariants in Real Algebraic and Analytic Geometry** Michel Coste,2007 In this volume the authors present some new trends in real algebraic geometry based on the study of arc spaces and additive invariants of real algebraic sets Generally real algebraic geometry uses methods of its own that usually differ sharply from the more widely known methods of complex algebraic geometry This feature is particularly apparent when studying the basic topological and geometric properties of real algebraic sets the rich algebraic structures are usually hidden and cannot be recovered from the topology The use of arc spaces and additive invariants partially obviates this disadvantage Moreover these methods are often parallel to the basic approaches of complex algebraic geometry The authors presentation contains the construction of local topological invariants of real algebraic sets by means of algebraically constructible functions This technique is extended to the wider family of arc symmetric semialgebraic sets Moreover the latter family defines a natural topology that fills a gap between the Zariski topology and the euclidean topology In real equisingularity theory Kuo s blow analytic equivalence of real analytic function germs provides an equivalence relation that corresponds to topological equivalence in the complex analytic set up Among other applications arc symmetric geometry via the motivic integration approach gives new invariants of this equivalence allowing some initial classification results The volume contains two courses and two survey articles that are designed for a wide audience in particular students and young researchers *Verzeichnis lieferbarer Bücher* ,1988
