industries it also examines the economics of road transport and more focused areas such as containerisation

**The Economics of Regulation** Alfred E. Kahn, 1988-06-22 As Chairman of the Civil Aeronautics Board in the late 1970s Alfred E. Kahn presided over the deregulation of the airlines and his book published earlier in that decade presented the first comprehensive integration of the economic theory and institutional practice of economic regulation In his lengthy new introduction to this edition Kahn surveys and analyzes the deregulation revolution that has not only swept the airlines but has transformed American public utilities and private industries generally over the past seventeen years While attitudes toward regulation have changed several times in the intervening years and government regulation has waxed and waned the question of whether to regulate more or to regulate less is a topic of constant debate one that *The Economics of Regulation* addresses incisively It clearly remains the standard work in the field a starting point and reference tool for anyone working in regulation Kahn points out that while dramatic changes have come about in the structurally competitive industries the airlines trucking stock exchange brokerage services railroads buses cable television oil and natural gas the consensus about the desirability and necessity for regulated monopoly in public utilities has likewise been dissolving under the burdens of inflation fuel crises and the traumatic experience with nuclear plants Kahn reviews and assesses the changes in both areas he is particularly frank in his appraisal of the effect of deregulation on the airlines His conclusion today mirrors that of his original seminal work that different industries need different mixes of institutional arrangements that cannot be decided on the basis of ideology

*National Transportation Planning* Adib Kanafani, Daniel Sperling, 2012-12-06 Soon after starting work on the development of a methodology for national transportation planning in Venezuela we realized the importance of an integrated management process for such an effort We also realized the absence in the literature of specific guidelines on how to manage and conduct a transportation planning effort The literature on the subject of national transportation planning is predominantly theoretical and technical in nature To a large extent the absence of literature on management and broad based methodological approaches reflects the limited and ad hoc nature of the experience in national transportation planning This book is an attempt to fill that gap The main objective of the book is to show one way by which a methodology for national transportation planning can be integrated into a process management framework It reports on the experience that the authors had in the Venezuelan case as well as in earlier national planning efforts The book is not intended as a theoretical discussion of planning Instead it adopts a particular theoretical stand and proceeds on that basis to develop a program for applying a specific methodology The intention is to leave as much of the details and elaborations of that methodology to the user This is motivated by two considerations The first is a pragmatic attempt to limit the scope of the book
